Chapter 2

Data Structure Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

activemq::core::ActiveMQAckHandler	141
activemq::core::ActiveMQConstants	227
activemq::library::ActiveMQCPP	238
activemq::core::ActiveMQTransactionContext	573
decaf::lang::Appendable	576
decaf::nio::CharBuffer	930
decaf::internal::nio::CharArrayBuffer	922
decaf::internal::AprPool	578
decaf::util::concurrent::atomic::AtomicBoolean	579
decaf::lang::AtomicRefCounter	587
decaf::util::concurrent::atomic::AtomicReference< T >	589
binary_function	663
decaf::util::Comparator< E >	1011
decaf::util::comparators::Less< E >	1862
decaf::util::Comparator< Pointer< T, R > >	1011
decaf::lang::PointerComparator< T, R >	2350
std::less< decaf::lang::Pointer< T > >	1864
activemq::wireformat::openwire::utils::BooleanStream	680
decaf::nio::Buffer	741

Chapter 3

Data Structure Index

3.1 Data Structures

Here are the data structures with brief descriptions:

decaf::util::AbstractCollection < E > (This class provides a skeletal implementation of the Collection (p. 982) interface, to minimize the effort required to implement this interface)	119
decaf::util::AbstractList < E > (This class provides a skeletal implementation of the List (p. 1865) interface to minimize the effort required to implement this interface backed by a "random access" data store (such as an array))	131
decaf::util::AbstractMap < K , V , COMPARATOR > (This class provides a skeletal implementation of the Map (p. 1970) interface, to minimize the effort required to implement this interface)	132
decaf::util::AbstractQueue < E > (This class provides skeletal implementations of some Queue (p. 2507) operations)	133
decaf::util::AbstractSequentialList < E > (This class provides a skeletal implementation of the List (p. 1865) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list))	137
decaf::util::AbstractSet < E > (This class provides a skeletal implementation of the Set (p. 2729) interface to minimize the effort required to implement this interface)	138
activemq::transport::AbstractTransportFactory (Abstract implementation of the TransportFactory (p. 3071) interface, providing the base functionality that's common to most of the TransportFactory (p. 3071) instances)	139
activemq::core::ActiveMQAckHandler (Interface class that is used to give CMS Messages an interface to Ack themselves with)	141
activemq::commands::ActiveMQBlobMessage	142
activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p. 146))	146
activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p. 150))	150
activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p. 154))	154

activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p. 158))	158
activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p. 162))	162
activemq::commands::ActiveMQBytesMessage	166
activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 182))	182
activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 186))	186
activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 190))	190
activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 194))	194
activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 198))	198
activemq::core::ActiveMQConnection (Concrete connection used for all connectors to the ActiveMQ broker)	202
activemq::core::ActiveMQConnectionFactory	211
activemq::core::ActiveMQConnectionMetaData (This class houses all the various settings and information that is used by an instance of an ActiveMQConnection (p. 202) class)	216
activemq::core::ActiveMQConnectionSupport	220
activemq::core::ActiveMQConstants (Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back an forth between string and enum values)	227
activemq::core::ActiveMQConsumer	230
activemq::library::ActiveMQCPP	238
activemq::commands::ActiveMQDestination	240
activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 250))	250
activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 254))	254
activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 258))	258
activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 262))	262
activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 265))	265
activemq::exceptions::ActiveMQException	269
activemq::commands::ActiveMQMapMessage	272

activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 284))	284
activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 288))	288
activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 292))	292
activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 296))	296
activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 300))	300
activemq::commands::ActiveMQMessage	304
activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 307))	307
activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 311))	311
activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 315))	315
activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 319))	319
activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 323))	323
activemq::commands::ActiveMQMessageTemplate< T >	327
activemq::commands::ActiveMQObjectMessage	344
activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 347))	347
activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 351))	351
activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 355))	355
activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 359))	359
activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 363))	363
activemq::core::ActiveMQProducer	367
activemq::util::ActiveMQProperties (Implementation of the CMSProperties interface that delegates to a decaf::util::Properties (p. 2494) object)	374
activemq::commands::ActiveMQQueue	379

activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 382))	382
activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 386))	386
activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 390))	390
activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 394))	394
activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 398))	398
activemq::core::ActiveMQSession	402
activemq::core::ActiveMQSessionExecutor (Delegate dispatcher for a single session)	418
activemq::commands::ActiveMQStreamMessage	422
activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 436))	436
activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 439))	439
activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 443))	443
activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 447))	447
activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 451))	451
activemq::commands::ActiveMQTempDestination	455
activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 459))	459
activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 462))	462
activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 466))	466
activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 470))	470
activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 473))	473
activemq::commands::ActiveMQTempQueue	477
activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMar- shaller (p. 481))	481

activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 485))	485
activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 489))	489
activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 493))	493
activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 497))	497
activemq::commands::ActiveMQTempTopic	501
activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 505))	505
activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 509))	509
activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 513))	513
activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 517))	517
activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 521))	521
activemq::commands::ActiveMQTextMessage	525
activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 529))	529
activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 533))	533
activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 537))	537
activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 541))	541
activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 545))	545
activemq::commands::ActiveMQTopic	549
activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 553))	553
activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 557))	557
activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 561))	561

activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 565))	565
activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 569))	569
activemq::core::ActiveMQTransactionContext (Transaction Management class, hold messages that are to be redelivered upon a request to roll-back)	573
decaf::lang::Appendable	576
decaf::internal::AprPool (Wraps an APR pool object so that classes in decaf can create a static member for use in static methods where apr function calls that need a pool are made)	578
decaf::util::concurrent::atomic::AtomicBoolean (A boolean value that may be up- dated atomically)	579
decaf::util::concurrent::atomic::AtomicInteger (An int value that may be updated atomically)	582
decaf::lang::AtomicRefCounter	587
decaf::util::concurrent::atomic::AtomicReference< T > (An Pointer reference that may be updated atomically)	589
activemq::transport::failover::BackupTransport	591
activemq::transport::failover::BackupTransportPool	594
activemq::commands::BaseCommand	596
activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 603))	603
activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 610))	610
activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 616))	616
activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 623))	623
activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 630))	630
activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller (Base class for all Marshallers that marshal DataStructures to and from the wire using the OpenWire protocol)	636
activemq::commands::BaseDataStructure	639
binary_function	663
decaf::net::BindException	663
decaf::io::BlockingByteArrayInputStream (This is a blocking version of a byte buffer stream)	666
decaf::lang::Boolean	674
activemq::commands::BooleanExpression	679
activemq::wireformat::openwire::utils::BooleanStream (Manages the writing and reading of boolean data streams to and from a data source such as a DataInput- Stream or DataOutputStream)	680
decaf::util::concurrent::BrokenBarrierException	683
activemq::commands::BrokerError (This class represents an Exception sent from the Broker)	686
activemq::exceptions::BrokerException	690

activemq::commands::BrokerId	691
activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 694))	694
activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 698))	698
activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 701))	701
activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 705))	705
activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 709))	709
activemq::commands::BrokerInfo	713
activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 721))	721
activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 725))	725
activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 729))	729
activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 733))	733
activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 737))	737
decaf::nio::Buffer (A container for data of a specific primitive type)	741
decaf::io::BufferedInputStream (A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream)	747
decaf::io::BufferedOutputStream (Wrapper around another output stream that buffers output before writing to the target output stream)	752
decaf::net::BufferedSocket (Buffered Socket (p. 2786) class that wraps a Socket (p. 2786) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes)	755
decaf::internal::nio::BufferFactory (Factory class used by static methods in the decaf::nio (p. 109) package to create the various default version of the NIO interfaces)	762
decaf::nio::BufferOverflowException	771
decaf::nio::BufferUnderflowException	774
decaf::lang::Byte	776
decaf::internal::util::ByteArrayAdapter (This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data)	784
decaf::internal::nio::ByteArrayBuffer (This class defines six categories of operations upon byte buffers:)	806
decaf::io::ByteArrayInputStream (Simple implementation of InputStream (p. 1630) that wraps around an STL Vector <code>std::vector<unsigned char></code>)	828
decaf::io::ByteArrayOutputStream	836
decaf::internal::nio::ByteArrayPerspective (This class extends ByteArray to create a reference counted byte array that can be held and used by several different ByteBuffers and allow them to know on destruction whose job it is to delete the perspective)	843
decaf::nio::ByteBuffer (This class defines six categories of operations upon byte buffers:)	848
cms::BytesMessage (A BytesMessage (p. 874) object is used to send a message containing a stream of unsigned bytes)	874

activemq::cmsutil::CachedConsumer (A cached message consumer contained within a pooled session)	888
activemq::cmsutil::CachedProducer (A cached message producer contained within a pooled session)	891
decaf::util::concurrent::Callable< V > (A task that returns a result and may throw an exception)	897
decaf::util::concurrent::CancellationException	898
decaf::security::cert::Certificate (Base interface for all identity certificates)	901
decaf::security::cert::CertificateEncodingException	904
decaf::security::cert::CertificateException	906
decaf::security::cert::CertificateExpiredException	908
decaf::security::cert::CertificateNotYetValidException	910
decaf::security::cert::CertificateParsingException	912
decaf::lang::Character	914
decaf::internal::nio::CharArrayBuffer	922
decaf::nio::CharBuffer (This class defines four categories of operations upon character buffers:)	930
decaf::lang::CharSequence (A CharSequence (p. 946) is a readable sequence of char values)	946
decaf::lang::exceptions::ClassCastException	948
decaf::io::Closeable (Interface for a class that implements the close method)	950
cms::Closeable (Interface for a class that implements the close method)	951
activemq::transport::failover::CloseTransportsTask	952
activemq::cmsutil::CmsAccessor (Base class for activemq::cmsutil::CmsTemplate (p. 969) and other CMS-accessing gateway helpers, defining common properties such as the CMS cms::ConnectionFactory (p. 1103) to operate on)	954
activemq::cmsutil::CmsDestinationAccessor (Extends the CmsAccessor (p. 954) to add support for resolving destination names)	957
cms::CMSException (CMS API Exception that is the base for all exceptions thrown from CMS classes)	960
activemq::util::CMSExceptionSupport	963
cms::CMSProperties (Interface for a Java-like properties object)	965
cms::CMSSecurityException (This exception must be thrown when a provider rejects a user name/password submitted by a client)	968
activemq::cmsutil::CmsTemplate (CmsTemplate (p. 969) simplifies performing synchronous CMS operations)	969
decaf::util::Collection< E > (The root interface in the collection hierarchy)	982
activemq::commands::Command	991
activemq::state::CommandVisitor (Interface for an Object that can visit the various Command Objects that are sent from and to this client)	996
activemq::state::CommandVisitorAdapter (Default Implementation of a CommandVisitor (p. 996) that returns NULL for all calls)	1003
decaf::lang::Comparable< T > (This interface imposes a total ordering on the objects of each class that implements it)	1009
decaf::util::Comparator< T > (A comparison function, which imposes a total ordering on some collection of objects)	1011
activemq::util::CompositeData (Represents a Composite URI)	1013
activemq::threads::CompositeTask (Represents a single task that can be part of a set of Tasks that are contained in a CompositeTaskRunner (p. 1017))	1016
activemq::threads::CompositeTaskRunner (A Task (p. 2956) Runner that can contain one or more CompositeTasks that are each checked for pending work and run if any is present in the order that the tasks were added)	1017
activemq::transport::CompositeTransport (A Composite Transport (p. 3066) is a Transport (p. 3066) implementation that is composed of several Transports)	1019

decaf::util::concurrent::ConcurrentMap < K , V , COMPARATOR > (Interface for a Map (p. 1970) type that provides additional atomic putIfAbsent , remove , and replace methods alongside the already available Map (p. 1970) interface) .	1020
decaf::util::concurrent::ConcurrentStlMap < K , V , COMPARATOR > (Map (p. 1970) template that wraps around a std::map to provide a more user-friendly interface and to provide common functions that do not exist in std::map) . . .	1024
decaf::util::concurrent::locks::Condition (Condition (p. 1040) factors out the Mutex (p. 2239) monitor methods (wait , notify and notifyAll) into distinct objects to give the effect of having multiple wait-sets per object, by combining them with the use of arbitrary Lock (p. 1898) implementations)	1040
decaf::util::concurrent::ConditionHandle	1046
decaf::internal::util::concurrent::ConditionImpl	1047
decaf::net::ConnectException	1049
cms::Connection (The client's connection to its provider)	1052
activemq::commands::ConnectionControl	1055
activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1059))	1059
activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1063))	1063
activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1067))	1067
activemq::wireformat::openwire::marshal::v5::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1071))	1071
activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1075))	1075
activemq::commands::ConnectionError	1079
activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1083))	1083
activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1087))	1087
activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1091))	1091
activemq::wireformat::openwire::marshal::v5::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1095))	1095
activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1099))	1099
cms::ConnectionFactory (Defines the interface for a factory that creates connection objects, the Connection (p. 1052) objects returned implement the CMS Connection (p. 1052) interface and hide the CMS Provider specific implementation details behind that interface)	1103
activemq::commands::ConnectionId	1106
activemq::wireformat::openwire::marshal::v3::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1109))	1109

activemq::wireformat::openwire::marshal::v1::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1113))	1113
activemq::wireformat::openwire::marshal::v4::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1116))	1116
activemq::wireformat::openwire::marshal::v5::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1120))	1120
activemq::wireformat::openwire::marshal::v2::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1124))	1124
activemq::commands::ConnectionInfo	1128
activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1134))	1134
activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1138))	1138
activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1142))	1142
activemq::wireformat::openwire::marshal::v5::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1146))	1146
activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1150))	1150
cms::ConnectionMetaData (A ConnectionMetaData (p. 1154) object provides information describing the Connection (p. 1052) object)	1154
activemq::state::ConnectionState	1158
activemq::state::ConnectionStateTracker	1160
activemq::commands::ConsumerControl	1165
activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1170))	1170
activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1174))	1174
activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1178))	1178
activemq::wireformat::openwire::marshal::v5::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1182))	1182
activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1186))	1186
activemq::commands::ConsumerId	1190
activemq::wireformat::openwire::marshal::v3::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1195))	1195

activemq::wireformat::openwire::marshal::v4::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1198))	1198
activemq::wireformat::openwire::marshal::v1::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1202))	1202
activemq::wireformat::openwire::marshal::v5::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1206))	1206
activemq::wireformat::openwire::marshal::v2::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1210))	1210
activemq::commands::ConsumerInfo	1214
activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1223))	1223
activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1226))	1226
activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1230))	1230
activemq::wireformat::openwire::marshal::v5::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1234))	1234
activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1238))	1238
activemq::state::ConsumerState	1242
activemq::commands::ControlCommand	1243
activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1246))	1246
activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1250))	1250
activemq::wireformat::openwire::marshal::v1::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1254))	1254
activemq::wireformat::openwire::marshal::v5::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1258))	1258
activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1262))	1262
decaf::util::concurrent::CountDownLatch	1266
activemq::commands::DataArrayResponse	1267
activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1271))	1271
activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1275))	1275

activemq::wireformat::openwire::marshal::v1::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1279))	1279
activemq::wireformat::openwire::marshal::v5::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1283))	1283
activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1287))	1287
decaf::io::DataInputStream (A data input stream lets an application read primitive Java data types from an underlying input stream in a machine-independent way)	1291
decaf::io::DataOutputStream (A data output stream lets an application write prim- itive Java data types to an output stream in a portable way)	1300
activemq::commands::DataResponse	1307
activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1310))	1310
activemq::wireformat::openwire::marshal::v1::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1314))	1314
activemq::wireformat::openwire::marshal::v5::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1318))	1318
activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1322))	1322
activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1326))	1326
activemq::wireformat::openwire::marshal::DataStreamMarshaller (Base class for all classes that marshal commands for Openwire)	1330
activemq::commands::DataStructure	1372
decaf::util::Date (Wrapper class around a time value in milliseconds)	1377
decaf::internal::DecafRuntime (Handles APR initialization and termination)	1381
activemq::threads::DedicatedTaskRunner	1382
activemq::transport::DefaultTransportListener	1384
decaf::util::concurrent::Delayed (A mix-in style interface for marking objects that should be acted upon after a given delay)	1385
cms::DeliveryMode (This is an Abstract class whose purpose is to provide a container for the delivery mode enumeration for CMS messages)	1386
cms::Destination (A Destination (p. 1387) object encapsulates a provider-specific ad- dress)	1387
activemq::commands::ActiveMQDestination::DestinationFilter	1390
activemq::commands::DestinationInfo	1390
activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1395))	1395
activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1399))	1399
activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1403))	1403

activemq::wireformat::openwire::marshal::v1::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1407))	1407
activemq::wireformat::openwire::marshal::v5::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1411))	1411
activemq::cmsutil::DestinationResolver (Resolves a CMS destination name to a Destination)	1415
activemq::commands::DiscoveryEvent	1416
activemq::wireformat::openwire::marshal::v2::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1420))	1420
activemq::wireformat::openwire::marshal::v3::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1424))	1424
activemq::wireformat::openwire::marshal::v4::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1427))	1427
activemq::wireformat::openwire::marshal::v5::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1431))	1431
activemq::wireformat::openwire::marshal::v1::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1435))	1435
activemq::core::DispatchData (Simple POJO that contains the information neces- sary to route a message to a specified consumer)	1439
activemq::core::Dispatcher (Interface for an object responsible for dispatching mes- sages to consumers)	1440
decaf::lang::Double	1441
decaf::internal::nio::DoubleArrayBuffer	1452
decaf::nio::DoubleBuffer (This class defines four categories of operations upon double buffers:)	1459
decaf::lang::DYNAMIC_CAST_TOKEN	1471
activemq::cmsutil::DynamicDestinationResolver (Resolves a CMS destination name to a Destination)	1471
decaf::util::Map< K, V, COMPARATOR >::Entry	1473
decaf::io::EOFException	1474
decaf::lang::Exception	1476
cms::ExceptionListener (If a CMS provider detects a serious problem, it notifies the client application through an ExceptionListener (p. 1483) that is registered with the Connection (p. 1052))	1483
activemq::commands::ExceptionResponse	1484
activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1487))	1487
activemq::wireformat::openwire::marshal::v1::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1491))	1491
activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1495))	1495
activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1499))	1499

activemq::wireformat::openwire::marshal::v5::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1503))	1503
decaf::util::concurrent::ExecutionException	1507
decaf::util::concurrent::Executor (An object that executes submitted decaf.lang Runnable (p. 2642) tasks)	1509
decaf::util::concurrent::ExecutorService (An Executor (p. 1509) that provides methods to manage termination and methods that can produce a Future (p. 1597) for tracking progress of one or more asynchronous tasks)	1511
activemq::transport::failover::FailoverTransport	1512
activemq::transport::failover::FailoverTransportFactory (Creates an instance of a FailoverTransport (p. 1512))	1523
activemq::transport::failover::FailoverTransportListener (Utility class used by the Transport (p. 3066) to perform the work of responding to events from the active Transport (p. 3066))	1525
decaf::util::logging::Filter (A Filter (p. 1527) can be used to provide fine grain control over what is logged, beyond the control provided by log levels)	1527
decaf::io::FilterInputStream (A FilterInputStream (p. 1528) contains some other input stream, which it uses as its basic source of data, possibly transforming the data along the way or providing additional functionality)	1528
decaf::io::FilterOutputStream (This class is the superclass of all classes that filter output streams)	1536
decaf::lang::Float	1544
decaf::internal::nio::FloatArrayBuffer	1555
decaf::nio::FloatBuffer (This class defines four categories of operations upon float buffers:)	1562
activemq::commands::FlushCommand	1573
activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1576))	1576
activemq::wireformat::openwire::marshal::v1::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1579))	1579
activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1583))	1583
activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1587))	1587
activemq::wireformat::openwire::marshal::v5::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1591))	1591
decaf::util::logging::Formatter (A Formatter (p. 1595) provides support for formatting LogRecords)	1595
decaf::util::concurrent::Future< V > (A Future (p. 1597) represents the result of an asynchronous computation)	1597
activemq::transport::correlator::FutureResponse (A container that holds a response object)	1600
decaf::security::GeneralSecurityException	1602
decaf::util::logging::Handler (A Handler (p. 1604) object takes log messages from a Logger (p. 1908) and exports them)	1604
decaf::internal::util::HexStringParser	1607
activemq::wireformat::openwire::utils::HexTable (Maps hexadecimal strings to the value of an index into the table, i.e)	1609

decaf::net::HttpRetryException	1610
decaf::lang::exceptions::IllegalArgumentException	1613
decaf::lang::exceptions::IllegalMonitorStateException	1616
decaf::lang::exceptions::IllegalStateException	1618
cms::IllegalStateException (This exception is thrown when a method is invoked at an illegal or inappropriate time or if the provider is not in an appropriate state for the requested operation)	1621
decaf::lang::exceptions::IllegalThreadStateException	1622
activemq::transport::inactivity::InactivityMonitor	1624
decaf::lang::exceptions::IndexOutOfBoundsException	1627
decaf::io::InputStream (Base interface for an input stream)	1630
decaf::internal::nio::IntArrayBuffer	1634
decaf::nio::IntBuffer (This class defines four categories of operations upon int buffers:)	1641
decaf::lang::Integer	1652
activemq::commands::IntegerResponse	1667
activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1669))	1669
activemq::wireformat::openwire::marshal::v1::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1673))	1673
activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1677))	1677
activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1681))	1681
activemq::wireformat::openwire::marshal::v5::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1685))	1685
activemq::transport::mock::InternalCommandListener (Listens for Commands sent from the MockTransport (p. 2227))	1689
decaf::lang::exceptions::InterruptedException	1691
decaf::io::InterruptedIOException	1693
cms::InvalidClientIdException (This exception must be thrown when a client attempts to set a connection's client ID to a value that is rejected by a provider)	1696
cms::InvalidDestinationException (This exception must be thrown when a destination either is not understood by a provider or is no longer valid)	1697
decaf::security::InvalidKeyException	1698
decaf::nio::InvalidMarkException	1700
cms::InvalidSelectorException (This exception must be thrown when a CMS client attempts to give a provider a message selector with invalid syntax)	1703
decaf::lang::exceptions::InvalidStateException	1704
decaf::io::IOException	1707
activemq::transport::IOTransport (Implementation of the Transport (p. 3066) interface that performs marshaling of commands to IO streams)	1709
decaf::lang::Iterable< E > (Implementing this interface allows an object to be cast to an Iterable (p. 1715) type for generic collections API calls)	1715
decaf::util::Iterator< T > (Defines an object that can be used to iterate over the elements of a collection)	1716
activemq::commands::JournalQueueAck	1718

activemq::wireformat::openwire::marshal::v2::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1722))	1722
activemq::wireformat::openwire::marshal::v4::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1725))	1725
activemq::wireformat::openwire::marshal::v3::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1729))	1729
activemq::wireformat::openwire::marshal::v1::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1733))	1733
activemq::wireformat::openwire::marshal::v5::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1737))	1737
activemq::commands::JournalTopicAck	1741
activemq::wireformat::openwire::marshal::v2::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1746))	1746
activemq::wireformat::openwire::marshal::v1::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1750))	1750
activemq::wireformat::openwire::marshal::v3::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1754))	1754
activemq::wireformat::openwire::marshal::v4::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1758))	1758
activemq::wireformat::openwire::marshal::v5::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1762))	1762
activemq::commands::JournalTrace	1766
activemq::wireformat::openwire::marshal::v2::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1769))	1769
activemq::wireformat::openwire::marshal::v4::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1773))	1773
activemq::wireformat::openwire::marshal::v3::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1777))	1777
activemq::wireformat::openwire::marshal::v1::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1781))	1781
activemq::wireformat::openwire::marshal::v5::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1785))	1785
activemq::commands::JournalTransaction	1789
activemq::wireformat::openwire::marshal::v2::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1793))	1793
activemq::wireformat::openwire::marshal::v3::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1797))	1797

activemq::wireformat::openwire::marshal::v4::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1801))	1801
activemq::wireformat::openwire::marshal::v1::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1804))	1804
activemq::wireformat::openwire::marshal::v5::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1808))	1808
activemq::commands::KeepAliveInfo	1812
activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1815))	1815
activemq::wireformat::openwire::marshal::v5::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1819))	1819
activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1823))	1823
activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1827))	1827
activemq::wireformat::openwire::marshal::v1::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1831))	1831
decaf::security::Key (The Key (p. 1835) interface is the top-level interface for all keys)	1835
decaf::security::KeyException	1837
activemq::commands::LastPartialCommand	1840
activemq::wireformat::openwire::marshal::v2::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1842))	1842
activemq::wireformat::openwire::marshal::v1::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1846))	1846
activemq::wireformat::openwire::marshal::v3::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1850))	1850
activemq::wireformat::openwire::marshal::v4::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1854))	1854
activemq::wireformat::openwire::marshal::v5::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1858))	1858
decaf::util::comparators::Less< E > (Simple Less (p. 1862) Comparator (p. 1011) that compares to elements to determine if the first is less than the second) . .	1862
std::less< decaf::lang::Pointer< T > > (An override of the less function object so that the Pointer objects can be stored in STL Maps, etc)	1864
decaf::util::List< E > (An ordered collection (also known as a sequence))	1865
decaf::util::ListIterator< E > (An iterator for lists that allows the programmer to traverse the list in either direction, modify the list during iteration, and obtain the iterator's current position in the list)	1871
activemq::commands::LocalTransactionId	1874

activemq::wireformat::openwire::marshal::v2::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 1878))	1878
activemq::wireformat::openwire::marshal::v3::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 1882))	1882
activemq::wireformat::openwire::marshal::v4::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 1886))	1886
activemq::wireformat::openwire::marshal::v1::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 1890))	1890
activemq::wireformat::openwire::marshal::v5::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 1894))	1894
decaf::util::concurrent::locks::Lock (Lock (p. 1898) implementations provide more extensive locking operations than can be obtained using synchronized statements)	1898
decaf::util::concurrent::Lock (A wrapper class around a given synchronization mech- anism that provides automatic release upon destruction)	1903
decaf::util::concurrent::locks::LockSupport (Basic thread blocking primitives for creating locks and other synchronization classes)	1905
decaf::util::logging::Logger	1908
decaf::util::logging::LoggerHierarchy	1916
activemq::io::LoggingInputStream	1917
activemq::io::LoggingOutputStream (OutputStream filter that just logs the data being written)	1919
activemq::transport::logging::LoggingTransport (A transport filter that logs com- mands as they are sent/received)	1920
decaf::util::logging::LogManager (There is a single global LogManager (p. 1923) object that is used to maintain a set of shared state about Loggers and log services)	1923
decaf::util::logging::LogRecord	1928
decaf::util::logging::LogWriter	1932
decaf::lang::Long	1934
decaf::internal::nio::LongArrayBuffer	1948
decaf::nio::LongBuffer (This class defines four categories of operations upon long long buffers:)	1955
activemq::util::LongSequenceGenerator (This class is used to generate a sequence of long long values that are incremented each time a new value is requested) .	1967
decaf::net::MalformedURLException	1968
decaf::util::Map< K, V, COMPARATOR > (Map (p. 1970) template that wraps around a std::map to provide a more user-friendly interface and to provide com- mon functions that do not exist in std::map)	1970
cms::MapMessage (A MapMessage (p. 1982) object is used to send a set of name- value pairs)	1982
decaf::util::logging::MarkBlockLogger (Defines a class that can be used to mark the entry and exit from scoped blocks)	1992
activemq::wireformat::MarshalAware	1992
activemq::wireformat::openwire::marshal::v2::MarshallerFactory (Used to cre- ate marshallers for a specific version of the wire protocol)	1995
activemq::wireformat::openwire::marshal::v4::MarshallerFactory (Used to cre- ate marshallers for a specific version of the wire protocol)	1996
activemq::wireformat::openwire::marshal::v1::MarshallerFactory (Used to cre- ate marshallers for a specific version of the wire protocol)	1997

activemq::wireformat::openwire::marshal::v3::MarshallerFactory (Used to create marshallers for a specific version of the wire protocol)	1997
activemq::wireformat::openwire::marshal::v5::MarshallerFactory (Used to create marshallers for a specific version of the wire protocol)	1998
decaf::lang::Math (The class Math (p. 1999) contains methods for performing basic numeric operations such as the elementary exponential, logarithm, square root, and trigonometric functions)	1999
activemq::util::MemoryUsage	2014
activemq::commands::Message	2018
cms::Message (Root of all messages)	2036
activemq::commands::MessageAck	2055
activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller (Mar- shaling code for Open Wire Format for MessageAckMarshaller (p. 2060))	2060
activemq::wireformat::openwire::marshal::v5::MessageAckMarshaller (Mar- shaling code for Open Wire Format for MessageAckMarshaller (p. 2064))	2064
activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller (Mar- shaling code for Open Wire Format for MessageAckMarshaller (p. 2068))	2068
activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller (Mar- shaling code for Open Wire Format for MessageAckMarshaller (p. 2072))	2072
activemq::wireformat::openwire::marshal::v1::MessageAckMarshaller (Mar- shaling code for Open Wire Format for MessageAckMarshaller (p. 2076))	2076
cms::MessageConsumer (A client uses a MessageConsumer (p. 2080) to received mes- sages from a destination)	2080
activemq::cmsutil::MessageCreator (Creates the user-defined message to be sent by the CmsTemplate (p. 969))	2083
activemq::commands::MessageDispatch	2084
activemq::core::MessageDispatchChannel	2088
activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p. 2095))	2095
activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p. 2099))	2099
activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p. 2103))	2103
activemq::wireformat::openwire::marshal::v1::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p. 2107))	2107
activemq::wireformat::openwire::marshal::v5::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p. 2111))	2111
activemq::commands::MessageDispatchNotification	2115
activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotification- Marshaller (p. 2120))	2120
activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotification- Marshaller (p. 2124))	2124

activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p. 2128))	2128
activemq::wireformat::openwire::marshal::v1::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p. 2132))	2132
activemq::wireformat::openwire::marshal::v5::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p. 2136))	2136
cms::MessageEOFException (This exception must be thrown when an unexpected end of stream has been reached when a StreamMessage (p. 2892) or BytesMessage (p. 874) is being read)	2140
cms::MessageFormatException (This exception must be thrown when a CMS client attempts to use a data type not supported by a message or attempts to read data in a message as the wrong type)	2141
activemq::commands::MessageId	2142
activemq::wireformat::openwire::marshal::v2::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2146))	2146
activemq::wireformat::openwire::marshal::v4::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2150))	2150
activemq::wireformat::openwire::marshal::v3::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2154))	2154
activemq::wireformat::openwire::marshal::v5::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2157))	2157
activemq::wireformat::openwire::marshal::v1::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2161))	2161
cms::MessageListener (A MessageListener (p. 2165) object is used to receive asynchronously delivered messages)	2165
activemq::wireformat::openwire::marshal::v2::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2166))	2166
activemq::wireformat::openwire::marshal::v4::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2170))	2170
activemq::wireformat::openwire::marshal::v3::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2175))	2175
activemq::wireformat::openwire::marshal::v5::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2179))	2179
activemq::wireformat::openwire::marshal::v1::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2183))	2183
cms::MessageNotReadableException (This exception must be thrown when a CMS client attempts to read a write-only message)	2187
cms::MessageNotWriteableException (This exception must be thrown when a CMS client attempts to write to a read-only message)	2188
cms::MessageProducer (A client uses a MessageProducer (p. 2189) object to send messages to a Destination (p. 1387))	2189
activemq::wireformat::openwire::utils::MessagePropertyInterceptor (Used the base ActiveMQMessage class to intercept calls to get and set properties in order to capture the calls that use the reserved JMS properties and get and set them in the OpenWire Message properties)	2196
activemq::commands::MessagePull	2202
activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2207))	2207

activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2211))	2211
activemq::wireformat::openwire::marshal::v1::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2215))	2215
activemq::wireformat::openwire::marshal::v5::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2219))	2219
activemq::wireformat::openwire::marshal::v4::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2223))	2223
activemq::transport::mock::MockTransport (The MockTransport (p. 2227) defines a base level Transport (p. 3066) class that is intended to be used in place of an a regular protocol Transport (p. 3066) such as TCP)	2227
activemq::transport::mock::MockTransportFactory (Manufactures MockTransports , which are objects that read from input streams and write to output streams)	2237
decaf::util::concurrent::Mutex (Mutex (p. 2239) object that offers recursive support on all platforms as well as providing the ability to use the standard wait / notify pattern used in languages like Java)	2239
decaf::util::concurrent::MutexHandle	2244
decaf::internal::util::concurrent::MutexImpl	2244
activemq::commands::NetworkBridgeFilter	2246
activemq::wireformat::openwire::marshal::v2::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2250))	2250
activemq::wireformat::openwire::marshal::v3::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2253))	2253
activemq::wireformat::openwire::marshal::v5::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2257))	2257
activemq::wireformat::openwire::marshal::v1::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2261))	2261
activemq::wireformat::openwire::marshal::v4::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2265))	2265
decaf::net::NoRouteToHostException	2269
decaf::security::NoSuchAlgorithmException	2272
decaf::lang::exceptions::NoSuchElementException	2274
decaf::security::NoSuchProviderException	2277
decaf::lang::exceptions::NullPointerException	2279
decaf::lang::Number (The abstract class Number (p. 2282) is the superclass of classes Byte (p. 776), Double (p. 1441), Float (p. 1544), Integer (p. 1652), Long (p. 1934), and Short (p. 2729))	2282
decaf::lang::exceptions::NumberFormatException	2284
cms::ObjectMessage (Place holder for interaction with JMS systems that support Java, the C++ client is not responsible for deserializing the contained Object)	2287
decaf::security_provider::unix::openssl::OpenSSLX500Principal (The OpenSSLX500Principal (p. 2287) wraps around an OpenSSL X509_NAME structure)	2287
decaf::security_provider::unix::openssl::OpenSSLX509Certificate	2290

activemq::wireformat::openwire::OpenWireFormat	2296
activemq::wireformat::openwire::OpenWireFormatFactory	2308
activemq::wireformat::openwire::OpenWireFormatNegotiator	2310
activemq::wireformat::openwire::OpenWireResponseBuilder	2313
activemq::wireformat::openwire::utils::OpenwireStringSupport	2315
decaf::io::OutputStream (Base interface for an output stream)	2316
activemq::commands::PartialCommand	2318
activemq::wireformat::openwire::marshal::v2::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2322))	2322
activemq::wireformat::openwire::marshal::v3::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2326))	2326
activemq::wireformat::openwire::marshal::v4::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2330))	2330
activemq::wireformat::openwire::marshal::v1::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2335))	2335
activemq::wireformat::openwire::marshal::v5::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2339))	2339
decaf::lang::Pointer< T, REFCOUNTER > (Decaf's implementation of a Smart Pointer (p. 2343) that is a template on a Type and is Thread Safe if the default Reference Counter is used)	2343
decaf::lang::PointerComparator< T, R > (This implementation of Comparator is designed to allows objects in a Collection to be sorted or tested for equality based on the value of the Object being Pointed to and not the value of the contained pointer in the Pointer (p. 2343) instance)	2350
activemq::cmsutil::PooledSession (A pooled session object that wraps around a del- egate session)	2351
decaf::util::concurrent::PooledThread	2364
decaf::util::concurrent::PooledThreadListener (Abstract Listener Interface for users of ThreadPool (p. 2977))	2366
decaf::net::PortUnreachableException	2368
activemq::util::PrimitiveList (List of primitives)	2370
activemq::util::PrimitiveMap (Map of named primitives)	2381
activemq::wireformat::openwire::marshal::PrimitiveTypesMarshaller (This class wraps the functionality needed to marshal a primitive map to the Openwire Format's expectation of what the map looks like on the wire)	2390
activemq::util::PrimitiveValueNode::PrimitiveValue (Define a union type com- prised of the various types)	2395
activemq::util::PrimitiveValueConverter (Class controls the conversion of data con- tained in a PrimitiveValueNode (p. 2398) from one type to another)	2397
activemq::util::PrimitiveValueNode (Class that wraps around a single value of one of the many types)	2398
decaf::security::Principal (Base interface for a principal, which can represent an indi- vidual or organization)	2411
decaf::util::PriorityQueue< E > (An unbounded priority queue based on a binary heap algorithm)	2413
activemq::commands::ProducerAck	2420
activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller (Mar- shaling code for Open Wire Format for ProducerAckMarshaller (p. 2424))	2424

activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2427))	2427
activemq::wireformat::openwire::marshal::v4::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2431))	2431
activemq::wireformat::openwire::marshal::v5::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2435))	2435
activemq::wireformat::openwire::marshal::v1::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2439))	2439
activemq::cmsutil::ProducerCallback (Callback for sending a message to a CMS destination)	2443
activemq::cmsutil::CmsTemplate::ProducerExecutor	2444
activemq::commands::ProducerId	2446
activemq::wireformat::openwire::marshal::v2::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2450))	2450
activemq::wireformat::openwire::marshal::v3::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2454))	2454
activemq::wireformat::openwire::marshal::v5::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2457))	2457
activemq::wireformat::openwire::marshal::v1::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2461))	2461
activemq::wireformat::openwire::marshal::v4::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2465))	2465
activemq::commands::ProducerInfo	2469
activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2474))	2474
activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2478))	2478
activemq::wireformat::openwire::marshal::v5::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2482))	2482
activemq::wireformat::openwire::marshal::v4::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2486))	2486
activemq::wireformat::openwire::marshal::v1::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2490))	2490
activemq::state::ProducerState	2494
decaf::util::Properties (Java-like properties class for mapping string names to string values)	2494
decaf::util::logging::PropertiesChangeListener (Defines the interface that classes can use to listen for change events on Properties (p. 2494))	2503
decaf::net::ProtocolException	2504
decaf::security::PublicKey (A public key)	2506

decaf::util::Queue< E > (A kind of collection provides advanced operations than other basic collections, such as insertion, extraction, and inspection)	2507
cms::Queue (An interface encapsulating a provider-specific queue name)	2510
cms::QueueBrowser (This class implements in interface for browsing the messages in a Queue (p. 2510) without removing them)	2511
decaf::util::Random (Random (p. 2513) Value Generator which is used to generate a stream of pseudorandom numbers)	2513
activemq::transport::inactivity::ReadChecker (Runnable class that is used by the {)	2517
decaf::io::Reader	2518
decaf::nio::ReadOnlyBufferException	2520
decaf::util::concurrent::locks::ReadWriteLock (A ReadWriteLock (p. 2522) maintains a pair of associated locks, one for read-only operations and one for writing)	2522
activemq::cmsutil::CmsTemplate::ReceiveExecutor	2524
decaf::util::concurrent::locks::ReentrantLock (A reentrant mutual exclusion Lock (p. 1898) with extended capabilities)	2526
decaf::util::concurrent::RejectedExecutionException	2533
decaf::util::concurrent::RejectedExecutionHandler (A handler for tasks that cannot be executed by a ThreadPoolExecutor (p. ??))	2536
activemq::commands::RemoveInfo	2536
activemq::wireformat::openwire::marshal::v1::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2540))	2540
activemq::wireformat::openwire::marshal::v5::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2544))	2544
activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2548))	2548
activemq::wireformat::openwire::marshal::v3::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2552))	2552
activemq::wireformat::openwire::marshal::v4::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2556))	2556
activemq::commands::RemoveSubscriptionInfo	2560
activemq::wireformat::openwire::marshal::v5::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2564))	2564
activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2568))	2568
activemq::wireformat::openwire::marshal::v1::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2572))	2572
activemq::wireformat::openwire::marshal::v3::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2576))	2576
activemq::wireformat::openwire::marshal::v4::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2580))	2580
activemq::commands::ReplayCommand	2584

activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2587))	2587
activemq::wireformat::openwire::marshal::v3::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2591))	2591
activemq::wireformat::openwire::marshal::v5::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2595))	2595
activemq::wireformat::openwire::marshal::v4::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2599))	2599
activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2603))	2603
activemq::cmsutil::CmsTemplate::ResolveProducerExecutor	2607
activemq::cmsutil::CmsTemplate::ResolveReceiveExecutor	2608
activemq::cmsutil::ResourceLifecycleManager (Manages the lifecycle of a set of CMS resources)	2608
activemq::commands::Response	2611
activemq::transport::mock::ResponseBuilder (Interface for all Protocols to imple- ment that defines the behavior of the Broker in response to messages of that protocol)	2614
activemq::transport::correlator::ResponseCorrelator (This type of transport filter is responsible for correlating asynchronous responses with requests)	2616
activemq::wireformat::openwire::marshal::v2::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2620))	2620
activemq::wireformat::openwire::marshal::v3::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2624))	2624
activemq::wireformat::openwire::marshal::v5::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2628))	2628
activemq::wireformat::openwire::marshal::v1::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2633))	2633
activemq::wireformat::openwire::marshal::v4::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2637))	2637
decaf::lang::Runnable (Interface for a runnable object - defines a task that can be run by a thread)	2642
decaf::lang::Runtime	2643
decaf::lang::exceptions::RuntimeException	2644
decaf::security_provider::SecurityProvider	2647
decaf::security_provider::SecurityProviderMap (Lookup Map for Connector Fac- tories)	2648
decaf::security_provider::SecurityProviderRegistrar (Registers the passed in provider into the provider map, this class can manage the lifetime of the regis- tered provider (default behaviour))	2649
decaf::util::concurrent::Semaphore (A counting semaphore)	2651
activemq::cmsutil::CmsTemplate::SendExecutor	2660
decaf::net::ServerSocket (A server socket class (for testing purposes))	2661
cms::Session (A Session (p. 2663) object is a single-threaded context for producing and consuming messages)	2663
activemq::cmsutil::SessionCallback (Callback for executing any number of opera- tions on a provided CMS Session)	2676
activemq::commands::SessionId	2677

activemq::wireformat::openwire::marshal::v5::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2681))	2681
activemq::wireformat::openwire::marshal::v1::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2685))	2685
activemq::wireformat::openwire::marshal::v2::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2689))	2689
activemq::wireformat::openwire::marshal::v4::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2693))	2693
activemq::wireformat::openwire::marshal::v3::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2697))	2697
activemq::commands::SessionInfo	2701
activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2705))	2705
activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2709))	2709
activemq::wireformat::openwire::marshal::v4::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2713))	2713
activemq::wireformat::openwire::marshal::v5::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2717))	2717
activemq::wireformat::openwire::marshal::v3::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2721))	2721
activemq::cmsutil::SessionPool (A pool of CMS sessions from the same connection and with the same acknowledge mode)	2725
activemq::state::SessionState	2726
decaf::util::Set< E > (A collection that contains no duplicate elements)	2729
decaf::lang::Short	2729
decaf::internal::nio::ShortArrayBuffer	2738
decaf::nio::ShortBuffer (This class defines four categories of operations upon short buffers:)	2745
activemq::commands::ShutdownInfo	2757
activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2760))	2760
activemq::wireformat::openwire::marshal::v4::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2763))	2763
activemq::wireformat::openwire::marshal::v3::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2767))	2767
activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2771))	2771
activemq::wireformat::openwire::marshal::v5::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2775))	2775
decaf::security::SignatureException	2779
decaf::util::logging::SimpleFormatter (Print a brief summary of the LogRecord (p. 1928) in a human readable format)	2782
decaf::util::logging::SimpleLogger	2784
decaf::net::Socket	2786
decaf::net::SocketError (Static utility class to simplify handling of error codes for socket operations)	2792
decaf::net::SocketException (Exception for errors when manipulating sockets)	2793

decaf::net::SocketFactory (Socket (p. 2786) Factory implementation for use in Creating Sockets)	2795
decaf::net::SocketInputStream (Input stream for performing reads on a socket) . .	2796
decaf::net::SocketOutputStream (Output stream for performing write operations on a socket)	2803
decaf::net::SocketTimeoutException	2809
activemq::commands::BrokerError::StackTraceElement	2811
decaf::internal::io::StandardErrorOutputStream (Wrapper Around the Standard error Output facility on the current platform)	2812
decaf::internal::io::StandardInputStream	2818
decaf::internal::io::StandardOutputStream	2825
cms::Startable (Interface for a class that implements the start method)	2831
decaf::lang::STATIC_CAST_TOKEN	2831
activemq::core::ActiveMQConstants::StaticInitializer	2832
decaf::util::StlList< E > (List (p. 1865) class that wraps the STL list object to provide a simpler interface and additional methods not provided by the STL type) . .	2833
decaf::util::StlMap< K, V, COMPARATOR > (Map (p. 1970) template that wraps around a std::map to provide a more user-friendly interface and to provide common functions that do not exist in std::map)	2845
decaf::util::StlQueue< T > (The Queue (p. 2507) class accepts messages with an psuh(m) command where m is the message to be queued)	2858
decaf::util::StlSet< E > (Set (p. 2729) template that wraps around a std::set to provide a more user-friendly interface and to provide common functions that do not exist in std::set)	2865
activemq::wireformat::stomp::StompCommandConstants	2871
activemq::wireformat::stomp::StompFrame (A Stomp-level message frame that encloses all messages to and from the broker)	2874
activemq::wireformat::stomp::StompHelper (Utility Methods used when marshaling to and from StompFrame's)	2878
activemq::wireformat::stomp::StompWireFormat	2883
activemq::wireformat::stomp::StompWireFormatFactory (Factory used to create the Stomp Wire Format instance)	2886
cms::Stoppable (Interface for a class that implements the stop method)	2887
decaf::util::logging::StreamHandler	2888
cms::StreamMessage (Interface for a StreamMessage (p. 2892))	2892
decaf::util::StringTokenizer	2904
activemq::commands::SubscriptionInfo	2907
activemq::wireformat::openwire::marshal::v1::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 2911))	2911
activemq::wireformat::openwire::marshal::v3::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 2915))	2915
activemq::wireformat::openwire::marshal::v5::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 2919))	2919
activemq::wireformat::openwire::marshal::v4::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 2923))	2923
activemq::wireformat::openwire::marshal::v2::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 2926))	2926
decaf::util::concurrent::Synchronizable (The interface for all synchronizable objects (that is, objects that can be locked and unlocked))	2930

decaf::internal::util::concurrent::SynchronizableImpl (A convenience class used by some Decaf classes to implement the Synchronizable interface when there is no issues related to multiple inheritance)	2941
activemq::core::Synchronization (Transacted Object Synchronization (p. 2945), used to sync the events of a Transaction with the items in the Transaction)	2945
decaf::util::concurrent::SynchronousQueue< E > (A BlockingQueue blocking queue} in which each insert operation must wait for a corresponding remove operation by another thread, and vice versa)	2946
decaf::lang::System	2953
activemq::threads::Task (Represents a unit of work that requires one or more iterations to complete)	2956
decaf::util::concurrent::TaskListener	2957
activemq::threads::TaskRunner	2958
decaf::net::TcpSocket (Platform-independent implementation of the socket interface)	2959
activemq::transport::tcp::TcpTransport (Implements a TCP/IP based transport filter, this transport is meant to wrap an instance of an IOTransport (p. 1709))	2967
activemq::transport::tcp::TcpTransportFactory (Factory Responsible for creating the TcpTransport (p. 2967))	2969
cms::TemporaryQueue (Defines a Temporary Queue (p. 2510) based Destination (p. 1387))	2971
cms::TemporaryTopic (Defines a Temporary Topic (p. 3014) based Destination (p. 1387))	2973
cms::TextMessage (Interface for a text message)	2974
decaf::util::concurrent::ThreadFactory (Public interface ThreadFactory (p. 2976))	2976
decaf::lang::ThreadGroup	2977
decaf::util::concurrent::ThreadPool (Defines a Thread Pool object that implements the functionality of pooling threads to perform user tasks)	2977
decaf::lang::Throwable (This class represents an error that has occurred)	2983
decaf::util::concurrent::TimeoutException	2987
decaf::util::Timer (A facility for threads to schedule tasks for future execution in a background thread)	2989
decaf::util::TimerTask (A Base class for a task object that can be scheduled for one-time or repeated execution by a Timer (p. 2989))	3000
decaf::internal::util::TimerTaskHeap (A Binary Heap implemented specifically for the Timer class in Decaf Util)	3002
decaf::util::concurrent::TimeUnit (A TimeUnit (p. 3005) represents time durations at a given unit of granularity and provides utility methods to convert across units, and to perform timing and delay operations in these units)	3005
cms::Topic (An interface encapsulating a provider-specific topic name)	3014
activemq::state::Tracked	3015
activemq::commands::TransactionId	3015
activemq::wireformat::openwire::marshal::v2::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3018))	3018
activemq::wireformat::openwire::marshal::v1::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3022))	3022
activemq::wireformat::openwire::marshal::v4::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3026))	3026

activemq::wireformat::openwire::marshal::v5::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3029))	3029
activemq::wireformat::openwire::marshal::v3::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3033))	3033
activemq::commands::TransactionInfo	3037
activemq::wireformat::openwire::marshal::v5::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3041))	3041
activemq::wireformat::openwire::marshal::v3::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3044))	3044
activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3048))	3048
activemq::wireformat::openwire::marshal::v4::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3052))	3052
activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3056))	3056
activemq::state::TransactionState	3060
decaf::internal::util::concurrent::Transferer< E > (Shared internal API for dual stacks and queues)	3062
decaf::internal::util::concurrent::TransferQueue< E > (This extends Scherer-Scott dual queue algorithm, differing, among other ways, by using modes within nodes rather than marked pointers)	3062
decaf::internal::util::concurrent::TransferStack< E >	3064
activemq::transport::Transport (Interface for a transport layer for command objects)	3066
activemq::transport::TransportFactory (Defines the interface for Factories that create Transports or TransportFilters)	3071
activemq::transport::TransportFilter (A filter on the transport layer)	3073
activemq::transport::TransportListener (A listener of asynchronous exceptions from a command transport object)	3080
activemq::transport::TransportRegistry (Registry of all Transport (p. 3066) Factories that are available to the client at runtime)	3082
decaf::net::UnknownHostException	3085
decaf::net::UnknownServiceException	3087
decaf::io::UnsupportedEncodingException (Thrown when the the Character Encoding is not supported)	3090
cms::UnsupportedOperationException (This exception must be thrown when a CMS client attempts use a CMS method that is not implemented or not supported by the CMS Provider in use)	3093
decaf::lang::exceptions::UnsupportedOperationException	3094
decaf::net::URI (This class represents an instance of a URI (p. 3096) as defined by RFC 2396)	3096
decaf::internal::net::URIEncoderDecoder	3107
decaf::internal::net::URIHelper (Helper class used by the URI classes in encoding and decoding of URI's)	3110
activemq::transport::failover::URIPool	3117
activemq::util::URISupport	3119
decaf::net::URISyntaxException	3122

decaf::internal::net::URIType (Basic type object that holds data that composes a given URI)	3126
decaf::net::URL (Class URL (p.3133) represents a Uniform Resource Locator, a pointer to a "resource" on the World Wide Web)	3133
decaf::net::URLDecoder	3135
decaf::net::URLEncoder	3136
activemq::util::Usage	3137
decaf::io::UTFDataFormatException (Thrown from classes that attempt to read or write a UTF-8 encoded string and an encoding error is encountered)	3139
decaf::util::UUID (A class that represents an immutable universally unique identifier (UUID (p. 3141)))	3141
activemq::wireformat::WireFormat (Provides a mechanism to marshal commands into and out of packets or into and out of streams, Channels and Datagrams) .	3148
activemq::wireformat::WireFormatFactory (The WireFormatFactory (p.3151) is the interface that all WireFormatFactory (p.3151) classes must extend) .	3151
activemq::commands::WireFormatInfo	3152
activemq::wireformat::openwire::marshal::v2::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p.3163))	3163
activemq::wireformat::openwire::marshal::v5::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p.3166))	3166
activemq::wireformat::openwire::marshal::v1::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p.3170))	3170
activemq::wireformat::openwire::marshal::v4::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p.3174))	3174
activemq::wireformat::openwire::marshal::v3::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p.3178))	3178
activemq::wireformat::WireFormatNegotiator (Defines a WireFormatNegotiator (p.3182) which allows a WireFormat (p.3148) to)	3182
activemq::wireformat::WireFormatRegistry (Registry of all WireFormat (p.3148) Factories that are available to the client at runtime)	3183
activemq::transport::inactivity::WriteChecker (Runnable class used by the {) .	3186
decaf::io::Writer	3187
decaf::security::auth::x500::X500Principal	3188
decaf::security::cert::X509Certificate (Base interface for all identity certificates) .	3189
activemq::commands::XATransactionId	3192
activemq::wireformat::openwire::marshal::v2::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p.3197))	3197
activemq::wireformat::openwire::marshal::v3::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p.3201))	3201
activemq::wireformat::openwire::marshal::v4::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p.3205))	3205
activemq::wireformat::openwire::marshal::v1::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p.3209))	3209

activemq::wireformat::openwire::marshal::v5::XATransactionIdMarshaller	
(Marshaling code for Open Wire Format for XATransactionIdMarshaller	
(p. 3213)	3213

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

src/main/activemq/cmsutil/	CachedConsumer.h	3219
src/main/activemq/cmsutil/	CachedProducer.h	3219
src/main/activemq/cmsutil/	CmsAccessor.h	3220
src/main/activemq/cmsutil/	CmsDestinationAccessor.h	3220
src/main/activemq/cmsutil/	CmsTemplate.h	3221
src/main/activemq/cmsutil/	DestinationResolver.h	3221
src/main/activemq/cmsutil/	DynamicDestinationResolver.h	3222
src/main/activemq/cmsutil/	MessageCreator.h	3222
src/main/activemq/cmsutil/	PooledSession.h	3223
src/main/activemq/cmsutil/	ProducerCallback.h	3223
src/main/activemq/cmsutil/	ResourceLifecycleManager.h	3224
src/main/activemq/cmsutil/	SessionCallback.h	3225
src/main/activemq/cmsutil/	SessionPool.h	3225
src/main/activemq/commands/	ActiveMQBlobMessage.h	3226
src/main/activemq/commands/	ActiveMQBytesMessage.h	3226
src/main/activemq/commands/	ActiveMQDestination.h	3227
src/main/activemq/commands/	ActiveMQMapMessage.h	3227
src/main/activemq/commands/	ActiveMQMessage.h	3228
src/main/activemq/commands/	ActiveMQMessageTemplate.h	3228
src/main/activemq/commands/	ActiveMQObjectMessage.h	3229
src/main/activemq/commands/	ActiveMQQueue.h	3229
src/main/activemq/commands/	ActiveMQStreamMessage.h	3230

5.2 activemq::cmsutil Namespace Reference

Data Structures

- class **CachedConsumer**

A cached message consumer contained within a pooled session.

- class **CachedProducer**

A cached message producer contained within a pooled session.

- class **CmsAccessor**

*Base class for **activemq.cmsutil.CmsTemplate** (p. 969) and other CMS-accessing gateway helpers, defining common properties such as the CMS **cms.ConnectionFactory** (p. 1103) to operate on.*

- class **CmsDestinationAccessor**

*Extends the **CmsAccessor** (p. 954) to add support for resolving destination names.*

- class **CmsTemplate**

***CmsTemplate** (p. 969) simplifies performing synchronous CMS operations.*

- class **DestinationResolver**

*Resolves a CMS destination name to a **Destination**.*

- class **DynamicDestinationResolver**

*Resolves a CMS destination name to a **Destination**.*

- class **MessageCreator**

*Creates the user-defined message to be sent by the **CmsTemplate** (p. 969).*

- class **PooledSession**

A pooled session object that wraps around a delegate session.

- class **ProducerCallback**

Callback for sending a message to a CMS destination.

- class **ResourceLifecycleManager**

Manages the lifecycle of a set of CMS resources.

- class **SessionCallback**

Callback for executing any number of operations on a provided CMS Session.

- class **SessionPool**

A pool of CMS sessions from the same connection and with the same acknowledge mode.

5.3 activemq::commands Namespace Reference

Data Structures

- class **ActiveMQBlobMessage**
- class **ActiveMQBytesMessage**
- class **ActiveMQDestination**
- class **ActiveMQMapMessage**
- class **ActiveMQMessage**
- class **ActiveMQMessageTemplate**
- class **ActiveMQObjectMessage**
- class **ActiveMQQueue**
- class **ActiveMQStreamMessage**
- class **ActiveMQTempDestination**
- class **ActiveMQTempQueue**
- class **ActiveMQTempTopic**
- class **ActiveMQTextMessage**
- class **ActiveMQTopic**
- class **BaseCommand**
- class **BaseDataStructure**
- class **BooleanExpression**
- class **BrokerError**

This class represents an Exception sent from the Broker.

- class **BrokerId**
- class **BrokerInfo**
- class **Command**
- class **ConnectionControl**
- class **ConnectionError**
- class **ConnectionId**
- class **ConnectionInfo**
- class **ConsumerControl**
- class **ConsumerId**
- class **ConsumerInfo**
- class **ControlCommand**
- class **DataArrayResponse**
- class **DataResponse**
- class **DataStructure**
- class **DestinationInfo**
- class **DiscoveryEvent**
- class **ExceptionResponse**
- class **FlushCommand**
- class **IntegerResponse**
- class **JournalQueueAck**
- class **JournalTopicAck**
- class **JournalTrace**
- class **JournalTransaction**
- class **KeepAliveInfo**
- class **LastPartialCommand**
- class **LocalTransactionId**

- class **Message**
- class **MessageAck**
- class **MessageDispatch**
- class **MessageDispatchNotification**
- class **MessageId**
- class **MessagePull**
- class **NetworkBridgeFilter**
- class **PartialCommand**
- class **ProducerAck**
- class **ProducerId**
- class **ProducerInfo**
- class **RemoveInfo**
- class **RemoveSubscriptionInfo**
- class **ReplayCommand**
- class **Response**
- class **SessionId**
- class **SessionInfo**
- class **ShutdownInfo**
- class **SubscriptionInfo**
- class **TransactionId**
- class **TransactionInfo**
- class **WireFormatInfo**
- class **XATransactionId**

5.4 activemq::core Namespace Reference

Data Structures

- class **ActiveMQAckHandler**
Interface class that is used to give CMS Messages an interface to Ack themselves with.
- class **ActiveMQConnection**
Concrete connection used for all connectors to the ActiveMQ broker.
- class **ActiveMQConnectionFactory**
- class **ActiveMQConnectionMetaData**
*This class houses all the various settings and information that is used by an instance of an **ActiveMQConnection** (p. 202) class.*
- class **ActiveMQConnectionSupport**
- class **ActiveMQConstants**
Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back an forth between string and enum values.
- class **ActiveMQConsumer**
- class **ActiveMQProducer**
- class **ActiveMQSession**
- class **ActiveMQSessionExecutor**
Delegate dispatcher for a single session.

- class **ActiveMQTransactionContext**
Transaction Management class, hold messages that are to be redelivered upon a request to roll-back.
- class **DispatchData**
Simple POCO that contains the information necessary to route a message to a specified consumer.
- class **Dispatcher**
Interface for an object responsible for dispatching messages to consumers.
- class **MessageDispatchChannel**
- class **Synchronization**
*Transacted Object **Synchronization** (p. 2945), used to sync the events of a Transaction with the items in the Transaction.*

5.5 activemq::exceptions Namespace Reference

Data Structures

- class **ActiveMQException**
- class **BrokerException**

5.6 activemq::io Namespace Reference

Data Structures

- class **LoggingInputStream**
- class **LoggingOutputStream**
OutputStream filter that just logs the data being written.

5.7 activemq::library Namespace Reference

Data Structures

- class **ActiveMQCPP**

5.8 activemq::state Namespace Reference

Data Structures

- class **CommandVisitor**
Interface for an Object that can visit the various Command Objects that are sent from and to this client.

- class **CommandVisitorAdapter**

*Default Implementation of a **CommandVisitor** (p. 996) that returns NULL for all calls.*

- class **ConnectionState**
- class **ConnectionStateTracker**
- class **ConsumerState**
- class **ProducerState**
- class **SessionState**
- class **Tracked**
- class **TransactionState**

5.9 activemq::threads Namespace Reference

Data Structures

- class **CompositeTask**

*Represents a single task that can be part of a set of Tasks that are contained in a **CompositeTaskRunner** (p. 1017).*

- class **CompositeTaskRunner**

*A **Task** (p. 2956) Runner that can contain one or more CompositeTasks that are each checked for pending work and run if any is present in the order that the tasks were added.*

- class **DedicatedTaskRunner**
- class **Task**

Represents a unit of work that requires one or more iterations to complete.

- class **TaskRunner**

5.10 activemq::transport Namespace Reference

Namespaces

- namespace **correlator**
- namespace **failover**
- namespace **inactivity**
- namespace **logging**
- namespace **mock**
- namespace **tcp**

Data Structures

- class **AbstractTransportFactory**

*Abstract implementation of the **TransportFactory** (p. 3071) interface, providing the base functionality that's common to most of the **TransportFactory** (p. 3071) instances.*

- class **CompositeTransport**

*A Composite **Transport** (p. 3066) is a **Transport** (p. 3066) implementation that is composed of several Transports.*

- class **DefaultTransportListener**
- class **IOTransport**

*Implementation of the **Transport** (p. 3066) interface that performs marshaling of commands to IO streams.*

- class **Transport**

Interface for a transport layer for command objects.

- class **TransportFactory**

Defines the interface for Factories that create Transports or TransportFilters.

- class **TransportFilter**

A filter on the transport layer.

- class **TransportListener**

A listener of asynchronous exceptions from a command transport object.

- class **TransportRegistry**

*Registry of all **Transport** (p. 3066) Factories that are available to the client at runtime.*

5.11 activemq::transport::correlator Namespace Reference

Data Structures

- class **FutureResponse**

A container that holds a response object.

- class **ResponseCorrelator**

This type of transport filter is responsible for correlating asynchronous responses with requests.

5.12 activemq::transport::failover Namespace Reference

Data Structures

- class **BackupTransport**
- class **BackupTransportPool**
- class **CloseTransportsTask**
- class **FailoverTransport**
- class **FailoverTransportFactory**

*Creates an instance of a **FailoverTransport** (p. 1512).*

- class **FailoverTransportListener**

*Utility class used by the **Transport** (p. 3066) to perform the work of responding to events from the active **Transport** (p. 3066).*

- class **URIPool**

5.13 activemq::transport::inactivity Namespace Reference

Data Structures

- class **InactivityMonitor**
- class **ReadChecker**
Runnable class that is used by the {}.
- class **WriteChecker**
Runnable class used by the {}.

5.14 activemq::transport::logging Namespace Reference

Data Structures

- class **LoggingTransport**
A transport filter that logs commands as they are sent/received.

5.15 activemq::transport::mock Namespace Reference

Data Structures

- class **InternalCommandListener**
*Listens for Commands sent from the **MockTransport** (p. 2227).*
- class **MockTransport**
*The **MockTransport** (p. 2227) defines a base level **Transport** (p. 3066) class that is intended to be used in place of an a regular protocol **Transport** (p. 3066) such as TCP.*
- class **MockTransportFactory**
Manufactures MockTransports, which are objects that read from input streams and write to output streams.
- class **ResponseBuilder**
Interface for all Protocols to implement that defines the behavior of the Broker in response to messages of that protocol.

5.16 activemq::transport::tcp Namespace Reference

Data Structures

- class **TcpTransport**

*Implements a TCP/IP based transport filter, this transport is meant to wrap an instance of an **IOTransport** (p. 1709).*

- class **TcpTransportFactory**

*Factory Responsible for creating the **TcpTransport** (p. 2967).*

5.17 activemq::util Namespace Reference

Data Structures

- class **ActiveMQProperties**

*Implementation of the **CMSProperties** interface that delegates to a **decaf::util::Properties** (p. 2494) object.*

- class **CMSExceptionSupport**

- class **CompositeData**

Represents a Composite URI.

- class **LongSequenceGenerator**

This class is used to generate a sequence of long long values that are incremented each time a new value is requested.

- class **MemoryUsage**

- class **PrimitiveList**

List of primitives.

- class **PrimitiveMap**

Map of named primitives.

- class **PrimitiveValueConverter**

*Class controls the conversion of data contained in a **PrimitiveValueNode** (p. 2398) from one type to another.*

- class **PrimitiveValueNode**

Class that wraps around a single value of one of the many types.

- class **URISupport**

- class **Usage**

5.18 activemq::wireformat Namespace Reference

Namespaces

- namespace **openwire**
- namespace **stomp**

Data Structures

- class **MarshalAware**
- class **WireFormat**
Provides a mechanism to marshal commands into and out of packets or into and out of streams, Channels and Datagrams.
- class **WireFormatFactory**
*The **WireFormatFactory** (p. 3151) is the interface that all **WireFormatFactory** (p. 3151) classes must extend.*
- class **WireFormatNegotiator**
*Defines a **WireFormatNegotiator** (p. 3182) which allows a **WireFormat** (p. 3148) to.*
- class **WireFormatRegistry**
*Registry of all **WireFormat** (p. 3148) Factories that are available to the client at runtime.*

5.19 activemq::wireformat::openwire Namespace Reference

Namespaces

- namespace **marshal**
- namespace **utils**

Data Structures

- class **OpenWireFormat**
- class **OpenWireFormatFactory**
- class **OpenWireFormatNegotiator**
- class **OpenWireResponseBuilder**

5.20 activemq::wireformat::openwire::marshal Namespace Reference

Namespaces

- namespace **v1**
- namespace **v2**
- namespace **v3**
- namespace **v4**
- namespace **v5**

Data Structures

- class **BaseDataStreamMarshaller**
Base class for all Marshallers that marshal DataStructures to and from the wire using the Open-Wire protocol.
- class **DataStreamMarshaller**
Base class for all classes that marshal commands for Openwire.
- class **PrimitiveTypesMarshaller**
This class wraps the functionality needed to marshal a primitive map to the Openwire Format's expectation of what the map looks like on the wire.

5.21 activemq::wireformat::openwire::marshal::v1 Namespace Reference

Data Structures

- class **ActiveMQBlobMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQBlobMessageMarshaller** (p. 150).*
- class **ActiveMQBytesMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQBytesMessageMarshaller** (p. 186).*
- class **ActiveMQDestinationMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQDestinationMarshaller** (p. 254).*
- class **ActiveMQMapMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p. 288).*
- class **ActiveMQMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 311).*
- class **ActiveMQObjectMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 351).*
- class **ActiveMQQueueMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 386).*
- class **ActiveMQStreamMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 439).*
- class **ActiveMQTempDestinationMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTempDestinationMarshaller** (p. 462).*
- class **ActiveMQTempQueueMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 485).*

- class **ActiveMQTempTopicMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 509).*
- class **ActiveMQTextMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p. 533).*
- class **ActiveMQTopicMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 557).*
- class **BaseCommandMarshaller**

5.25 activemq::wireformat::openwire::marshal::v5 Namespace Reference

Data Structures

- class **ActiveMQBlobMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQBlobMessageMarshaller** (p. 158).*
- class **ActiveMQBytesMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQBytesMessageMarshaller** (p. 194).*
- class **ActiveMQDestinationMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQDestinationMarshaller** (p. 262).*
- class **ActiveMQMapMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p. 296).*
- class **ActiveMQMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 319).*
- class **ActiveMQObjectMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 359).*
- class **ActiveMQQueueMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 394).*
- class **ActiveMQStreamMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 447).*
- class **ActiveMQTempDestinationMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTempDestinationMarshaller** (p. 470).*
- class **ActiveMQTempQueueMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 493).*
- class **ActiveMQTempTopicMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 517).*
- class **ActiveMQTextMessageMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p. 541).*
- class **ActiveMQTopicMarshaller**
*Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 565).*
- class **BaseCommandMarshaller**
*Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 623).*
- class **BrokerIdMarshaller**

*Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 705).*

- class **BrokerInfoMarshaller**

*Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 733).*

- class **ConnectionControlMarshaller**

*Marshaling code for Open Wire Format for **ConnectionControlMarshaller** (p. 1071).*

- class **ConnectionErrorMarshaller**

*Marshaling code for Open Wire Format for **ConnectionErrorMarshaller** (p. 1095).*

- class **ConnectionIdMarshaller**

*Marshaling code for Open Wire Format for **ConnectionIdMarshaller** (p. 1120).*

- class **ConnectionInfoMarshaller**

*Marshaling code for Open Wire Format for **ConnectionInfoMarshaller** (p. 1146).*

- class **ConsumerControlMarshaller**

*Marshaling code for Open Wire Format for **ConsumerControlMarshaller** (p. 1182).*

- class **ConsumerIdMarshaller**

*Marshaling code for Open Wire Format for **ConsumerIdMarshaller** (p. 1206).*

- class **ConsumerInfoMarshaller**

*Marshaling code for Open Wire Format for **ConsumerInfoMarshaller** (p. 1234).*

- class **ControlCommandMarshaller**

*Marshaling code for Open Wire Format for **ControlCommandMarshaller** (p. 1258).*

- class **DataArrayResponseMarshaller**

*Marshaling code for Open Wire Format for **DataArrayResponseMarshaller** (p. 1283).*

- class **DataResponseMarshaller**

*Marshaling code for Open Wire Format for **DataResponseMarshaller** (p. 1318).*

- class **DestinationInfoMarshaller**

*Marshaling code for Open Wire Format for **DestinationInfoMarshaller** (p. 1411).*

- class **DiscoveryEventMarshaller**

*Marshaling code for Open Wire Format for **DiscoveryEventMarshaller** (p. 1431).*

- class **ExceptionResponseMarshaller**

*Marshaling code for Open Wire Format for **ExceptionResponseMarshaller** (p. 1503).*

- class **FlushCommandMarshaller**

*Marshaling code for Open Wire Format for **FlushCommandMarshaller** (p. 1591).*

- class **IntegerResponseMarshaller**

*Marshaling code for Open Wire Format for **IntegerResponseMarshaller** (p. 1685).*

- class **JournalQueueAckMarshaller**
*Marshaling code for Open Wire Format for **JournalQueueAckMarshaller** (p. 1737).*
- class **JournalTopicAckMarshaller**
*Marshaling code for Open Wire Format for **JournalTopicAckMarshaller** (p. 1762).*
- class **JournalTraceMarshaller**
*Marshaling code for Open Wire Format for **JournalTraceMarshaller** (p. 1785).*
- class **JournalTransactionMarshaller**
*Marshaling code for Open Wire Format for **JournalTransactionMarshaller** (p. 1808).*
- class **KeepAliveInfoMarshaller**
*Marshaling code for Open Wire Format for **KeepAliveInfoMarshaller** (p. 1819).*
- class **LastPartialCommandMarshaller**
*Marshaling code for Open Wire Format for **LastPartialCommandMarshaller** (p. 1858).*
- class **LocalTransactionIdMarshaller**
*Marshaling code for Open Wire Format for **LocalTransactionIdMarshaller** (p. 1894).*
- class **MarshallerFactory**
Used to create marshallers for a specific version of the wire protocol.
- class **MessageAckMarshaller**
*Marshaling code for Open Wire Format for **MessageAckMarshaller** (p. 2064).*
- class **MessageDispatchMarshaller**
*Marshaling code for Open Wire Format for **MessageDispatchMarshaller** (p. 2111).*
- class **MessageDispatchNotificationMarshaller**
*Marshaling code for Open Wire Format for **MessageDispatchNotificationMarshaller** (p. 2136).*
- class **MessageIdMarshaller**
*Marshaling code for Open Wire Format for **MessageIdMarshaller** (p. 2157).*
- class **MessageMarshaller**
*Marshaling code for Open Wire Format for **MessageMarshaller** (p. 2179).*
- class **MessagePullMarshaller**
*Marshaling code for Open Wire Format for **MessagePullMarshaller** (p. 2219).*
- class **NetworkBridgeFilterMarshaller**
*Marshaling code for Open Wire Format for **NetworkBridgeFilterMarshaller** (p. 2257).*
- class **PartialCommandMarshaller**
*Marshaling code for Open Wire Format for **PartialCommandMarshaller** (p. 2339).*
- class **ProducerAckMarshaller**

*Marshaling code for Open Wire Format for **ProducerAckMarshaller** (p. 2435).*

- class **ProducerIdMarshaller**

*Marshaling code for Open Wire Format for **ProducerIdMarshaller** (p. 2457).*

- class **ProducerInfoMarshaller**

*Marshaling code for Open Wire Format for **ProducerInfoMarshaller** (p. 2482).*

- class **RemoveInfoMarshaller**

*Marshaling code for Open Wire Format for **RemoveInfoMarshaller** (p. 2544).*

- class **RemoveSubscriptionInfoMarshaller**

*Marshaling code for Open Wire Format for **RemoveSubscriptionInfoMarshaller** (p. 2564).*

- class **ReplayCommandMarshaller**

*Marshaling code for Open Wire Format for **ReplayCommandMarshaller** (p. 2595).*

- class **ResponseMarshaller**

*Marshaling code for Open Wire Format for **ResponseMarshaller** (p. 2628).*

- class **SessionIdMarshaller**

*Marshaling code for Open Wire Format for **SessionIdMarshaller** (p. 2681).*

- class **SessionInfoMarshaller**

*Marshaling code for Open Wire Format for **SessionInfoMarshaller** (p. 2717).*

- class **ShutdownInfoMarshaller**

*Marshaling code for Open Wire Format for **ShutdownInfoMarshaller** (p. 2775).*

- class **SubscriptionInfoMarshaller**

*Marshaling code for Open Wire Format for **SubscriptionInfoMarshaller** (p. 2919).*

- class **TransactionIdMarshaller**

*Marshaling code for Open Wire Format for **TransactionIdMarshaller** (p. 3029).*

- class **TransactionInfoMarshaller**

*Marshaling code for Open Wire Format for **TransactionInfoMarshaller** (p. 3041).*

- class **WireFormatInfoMarshaller**

*Marshaling code for Open Wire Format for **WireFormatInfoMarshaller** (p. 3166).*

- class **XATransactionIdMarshaller**

*Marshaling code for Open Wire Format for **XATransactionIdMarshaller** (p. 3213).*

5.26 activemq::wireformat::openwire::utils Namespace Reference

Data Structures

- class **BooleanStream**

Manages the writing and reading of boolean data streams to and from a data source such as a `DataInputStream` or `DataOutputStream`.

- class **HexTable**

*The **HexTable** (p. 1609) class maps hexadecimal strings to the value of an index into the table, i.e.*

- class **MessagePropertyInterceptor**

Used the base `ActiveMQMessage` class to intercept calls to get and set properties in order to capture the calls that use the reserved JMS properties and get and set them in the `OpenWire` Message properties.

- class **OpenwireStringSupport**

5.27 activemq::wireformat::stomp Namespace Reference

Data Structures

- class **StompCommandConstants**

- class **StompFrame**

A Stomp-level message frame that encloses all messages to and from the broker.

- class **StompHelper**

Utility Methods used when marshaling to and from `StompFrame`'s.

- class **StompWireFormat**

- class **StompWireFormatFactory**

Factory used to create the Stomp Wire Format instance.

5.28 cms Namespace Reference

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

Data Structures

- class **BytesMessage**

*A **BytesMessage** (p. 874) object is used to send a message containing a stream of unsigned bytes.*

- class **Closeable**

Interface for a class that implements the close method.

- class **CMSException**

CMS API Exception that is the base for all exceptions thrown from CMS classes.

- class **CMSProperties**

Interface for a Java-like properties object.

- class **CMSSecurityException**

This exception must be thrown when a provider rejects a user name/password submitted by a client.

- class **Connection**

The client's connection to its provider.

- class **ConnectionFactory**

*Defines the interface for a factory that creates connection objects, the **Connection** (p. 1052) objects returned implement the CMS **Connection** (p. 1052) interface and hide the CMS Provider specific implementation details behind that interface.*

- class **ConnectionMetaData**

*A **ConnectionMetaData** (p. 1154) object provides information describing the **Connection** (p. 1052) object.*

- class **DeliveryMode**

This is an Abstract class whose purpose is to provide a container for the delivery mode enumeration for CMS messages.

- class **Destination**

*A **Destination** (p. 1387) object encapsulates a provider-specific address.*

- class **ExceptionListener**

*If a CMS provider detects a serious problem, it notifies the client application through an **ExceptionListener** (p. 1483) that is registered with the **Connection** (p. 1052).*

- class **IllegalStateException**

This exception is thrown when a method is invoked at an illegal or inappropriate time or if the provider is not in an appropriate state for the requested operation.

- class **InvalidClientIdException**

This exception must be thrown when a client attempts to set a connection's client ID to a value that is rejected by a provider.

- class **InvalidDestinationException**

This exception must be thrown when a destination either is not understood by a provider or is no longer valid.

- class **InvalidSelectorException**

This exception must be thrown when a CMS client attempts to give a provider a message selector with invalid syntax.

- class **MapMessage**
*A **MapMessage** (p. 1982) object is used to send a set of name-value pairs.*
- class **Message**
Root of all messages.
- class **MessageConsumer**
*A client uses a **MessageConsumer** (p. 2080) to received messages from a destination.*
- class **MessageEOFException**
*This exception must be thrown when an unexpected end of stream has been reached when a **StreamMessage** (p. 2892) or **BytesMessage** (p. 874) is being read.*
- class **MessageFormatException**
This exception must be thrown when a CMS client attempts to use a data type not supported by a message or attempts to read data in a message as the wrong type.
- class **MessageListener**
*A **MessageListener** (p. 2165) object is used to receive asynchronously delivered messages.*
- class **MessageNotReadableException**
This exception must be thrown when a CMS client attempts to read a write-only message.
- class **MessageNotWriteableException**
This exception must be thrown when a CMS client attempts to write to a read-only message.
- class **MessageProducer**
*A client uses a **MessageProducer** (p. 2189) object to send messages to a **Destination** (p. 1387).*
- class **ObjectMessage**
Place holder for interaction with JMS systems that support Java, the C++ client is not responsible for deserializing the contained Object.
- class **Queue**
An interface encapsulating a provider-specific queue name.
- class **QueueBrowser**
*This class implements in interface for browsing the messages in a **Queue** (p. 2510) without removing them.*
- class **Session**
*A **Session** (p. 2663) object is a single-threaded context for producing and consuming messages.*
- class **Startable**
Interface for a class that implements the start method.
- class **Stoppable**
Interface for a class that implements the stop method.
- class **StreamMessage**

*Interface for a **StreamMessage** (p. 2892).*

- class **TemporaryQueue**

*Defines a Temporary **Queue** (p. 2510) based **Destination** (p. 1387).*

- class **TemporaryTopic**

*Defines a Temporary **Topic** (p. 3014) based **Destination** (p. 1387).*

- class **TextMessage**

Interface for a text message.

- class **Topic**

An interface encapsulating a provider-specific topic name.

- class **UnsupportedOperationException**

This exception must be thrown when a CMS client attempts use a CMS method that is not implemented or not supported by the CMS Provider in use.

5.30 `decaf::internal` Namespace Reference

Namespaces

- namespace `io`
- namespace `net`
- namespace `nio`
- namespace `util`

Data Structures

- class `AprPool`
Wraps an APR pool object so that classes in `decaf` can create a static member for use in static methods where apr function calls that need a pool are made.
- class `DecafRuntime`
Handles APR initialization and termination.

5.31 `decaf::internal::io` Namespace Reference

Data Structures

- class `StandardErrorOutputStream`
Wrapper Around the Standard error Output facility on the current platform.
- class `StandardInputStream`
- class `StandardOutputStream`

5.32 `decaf::internal::net` Namespace Reference

Data Structures

- class `URIEncoderDecoder`

- class **URIHelper**

Helper class used by the URI classes in encoding and decoding of URI's.

- class **URIType**

Basic type object that holds data that composes a given URI.

5.33 decaf::internal::nio Namespace Reference

Data Structures

- class **BufferFactory**

*Factory class used by static methods in the **decaf::nio** (p. 109) package to create the various default version of the NIO interfaces.*

- class **ByteBuffer**

This class defines six categories of operations upon byte buffers:

- class **ByteArrayPerspective**

*This class extends **ByteArray** to create a reference counted byte array that can be held and used by several different **ByteBuffers** and allow them to know on destruction whose job it is to delete the perspective.*

- class **CharArrayBuffer**
- class **DoubleArrayBuffer**
- class **FloatArrayBuffer**
- class **IntArrayBuffer**
- class **LongArrayBuffer**
- class **ShortArrayBuffer**

5.34 decaf::internal::util Namespace Reference

Namespaces

- namespace **concurrent**

Data Structures

- class **ByteArrayAdapter**

This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data.

- class **HexStringParser**
- class **TimerTaskHeap**

*A Binary Heap implemented specifically for the **Timer** class in **Decaf Util**.*

5.35 decaf::internal::util::concurrent Namespace Reference

Data Structures

- class **ConditionImpl**
- class **MutexImpl**
- class **SynchronizableImpl**

A convenience class used by some Decaf classes to implement the Synchronizable interface when there is no issues related to multiple inheritance.

- class **Transferer**

Shared internal API for dual stacks and queues.

- class **TransferQueue**

This extends Scherer-Scott dual queue algorithm, differing, among other ways, by using modes within nodes rather than marked pointers.

- class **TransferStack**

5.36 decaf::io Namespace Reference

Data Structures

- class **BlockingByteArrayInputStream**

This is a blocking version of a byte buffer stream.

- class **BufferedInputStream**

A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream.

- class **BufferedOutputStream**

Wrapper around another output stream that buffers output before writing to the target output stream.

- class **ByteArrayInputStream**

*Simple implementation of **InputStream** (p.1630) that wraps around an STL Vector `std::vector<unsigned char>`.*

- class **ByteArrayOutputStream**

- class **Closeable**

Interface for a class that implements the close method.

- class **DataInputStream**

A data input stream lets an application read primitive Java data types from an underlying input stream in a machine-independent way.

- class **DataOutputStream**

A data output stream lets an application write primitive Java data types to an output stream in a portable way.

- class **EOFException**
- class **FilterInputStream**

A **FilterInputStream** (p. 1528) contains some other input stream, which it uses as its basic source of data, possibly transforming the data along the way or providing additional functionality.

- class **FilterOutputStream**

This class is the superclass of all classes that filter output streams.

- class **InputStream**

Base interface for an input stream.

- class **InterruptedIOException**
- class **IOException**
- class **OutputStream**

Base interface for an output stream.

- class **Reader**
- class **UnsupportedEncodingException**

Thrown when the the Character Encoding is not supported.

- class **UTFDataFormatException**

Thrown from classes that attempt to read or write a UTF-8 encoded string and an encoding error is encountered.

- class **Writer**

5.37 decaf::lang Namespace Reference

Namespaces

- namespace **exceptions**

Data Structures

- class **Appendable**
- class **Boolean**
- class **Byte**
- class **Character**
- class **CharSequence**

A **CharSequence** (p. 946) is a readable sequence of char values.

- class **Comparable**

This interface imposes a total ordering on the objects of each class that implements it.

- class **Double**
- class **Exception**
- class **Float**
- class **Integer**
- class **Iterable**

*Implementing this interface allows an object to be cast to an **Iterable** (p. 1715) type for generic collections API calls.*

- class **Long**

- class **Math**

*The class **Math** (p. 1999) contains methods for performing basic numeric operations such as the elementary exponential, logarithm, square root, and trigonometric functions.*

- class **Number**

*The abstract class **Number** (p. 2282) is the superclass of classes **Byte** (p. 776), **Double** (p. 1441), **Float** (p. 1544), **Integer** (p. 1652), **Long** (p. 1934), and **Short** (p. 2729).*

- class **AtomicRefCounter**

- struct **STATIC_CAST_TOKEN**

- struct **DYNAMIC_CAST_TOKEN**

- class **Pointer**

*Decaf's implementation of a Smart **Pointer** (p. 2343) that is a template on a Type and is Thread Safe if the default Reference Counter is used.*

- class **PointerComparator**

*This implementation of Comparator is designed to allows objects in a Collection to be sorted or tested for equality based on the value of the Object being Pointed to and not the value of the contained pointer in the **Pointer** (p. 2343) instance.*

- class **Runnable**

Interface for a runnable object - defines a task that can be run by a thread.

- class **Runtime**

- class **Short**

- class **System**

- class **ThreadGroup**

- class **Throwable**

This class represents an error that has occurred.

Functions

- template<typename T , typename R , typename U >
bool **operator**== (const **Pointer**< T, R > &left, const U *right)
- template<typename T , typename R , typename U >
bool **operator**== (const U *left, const **Pointer**< T, R > &right)

bool **operator**!= (const **Pointer**< T, R > &left, const U *right)
- template<typename T , typename R , typename U >
bool **operator**!= (const U *left, const **Pointer**< T, R > &right)

5.37.1 Function Documentation

5.37.1.1 `template<typename T , typename R , typename U > bool
decaf::lang::operator!= (const Pointer< T, R > & left, const U * right
) [inline]`

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

5.37.1.2 `template<typename T , typename R , typename U > bool
decaf::lang::operator!= (const U * left, const Pointer< T, R > & right
) [inline]`

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

5.37.1.3 `template<typename T , typename R , typename U > bool
decaf::lang::operator== (const Pointer< T, R > & left, const U *
right) [inline]`

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

5.37.1.4 `template<typename T , typename R , typename U > bool
decaf::lang::operator== (const U * left, const Pointer< T, R > &
right) [inline]`

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

5.38 decaf::lang::exceptions Namespace Reference

Data Structures

- class `ClassCastException`
- class `IllegalArgumentException`
- class `IllegalMonitorStateException`
- class `IllegalStateException`
- class `IllegalThreadStateException`
- class `IndexOutOfBoundsException`
- class `InterruptedException`
- class `InvalidStateException`
- class `NoSuchElementException`
- class `NullPointerException`
- class `NumberFormatException`
- class `RuntimeException`
- class `UnsupportedOperationException`

5.39 decaf::net Namespace Reference

Data Structures

- class `BindException`

- class **BufferedSocket**

*Buffered **Socket** (p. 2786) class that wraps a **Socket** (p. 2786) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes.*

- class **ConnectException**
- class **HttpRetryException**
- class **MalformedURLException**
- class **NoRouteToHostException**
- class **PortUnreachableException**
- class **ProtocolException**
- class **ServerSocket**

A server socket class (for testing purposes).

- class **Socket**
- class **SocketError**

Static utility class to simplify handling of error codes for socket operations.

- class **SocketException**

Exception for errors when manipulating sockets.

- class **SocketFactory**

***Socket** (p. 2786) Factory implementation for use in Creating Sockets.*

- class **SocketInputStream**

Input stream for performing reads on a socket.

- class **SocketOutputStream**

Output stream for performing write operations on a socket.

- class **SocketTimeoutException**
- class **TcpSocket**

Platform-independent implementation of the socket interface.

- class **UnknownHostException**
- class **UnknownServiceException**
- class **URI**

*This class represents an instance of a **URI** (p. 3096) as defined by RFC 2396.*

- class **URISyntaxException**
- class **URL**

*Class **URL** (p. 3133) represents a Uniform Resource Locator, a pointer to a "resource" on the World Wide Web.*

- class **URLDecoder**
- class **URLEncoder**

5.40 decaf::nio Namespace Reference

Data Structures

- class **Buffer**

A container for data of a specific primitive type.

- class **BufferOverflowException**
- class **BufferUnderflowException**
- class **ByteBuffer**

This class defines six categories of operations upon byte buffers:

- class **CharBuffer**

This class defines four categories of operations upon character buffers:

- class **DoubleBuffer**

This class defines four categories of operations upon double buffers:

- class **FloatBuffer**

This class defines four categories of operations upon float buffers:

- class **IntBuffer**

This class defines four categories of operations upon int buffers:

- class **InvalidMarkException**
- class **LongBuffer**

This class defines four categories of operations upon long long buffers:

- class **ReadOnlyBufferException**
- class **ShortBuffer**

This class defines four categories of operations upon short buffers:

5.41 decaf::security Namespace Reference

Namespaces

- namespace **auth**
- namespace **cert**

Data Structures

- class **GeneralSecurityException**
- class **InvalidKeyException**
- class **Key**

*The **Key** (p. 1835) interface is the top-level interface for all keys.*

- class **KeyException**
- class **NoSuchAlgorithmException**

- class **NoSuchProviderException**
- class **Principal**

Base interface for a principal, which can represent an individual or organization.

- class **PublicKey**
A public key.
- class **SignatureException**

5.42 decaf::security::auth Namespace Reference

Namespaces

- namespace **x500**

5.43 decaf::security::auth::x500 Namespace Reference

Data Structures

- class **X500Principal**

5.44 decaf::security::cert Namespace Reference

Data Structures

- class **Certificate**
Base interface for all identity certificates.
- class **CertificateEncodingException**
- class **CertificateException**
- class **CertificateExpiredException**
- class **CertificateNotYetValidException**
- class **CertificateParsingException**
- class **X509Certificate**
Base interface for all identity certificates.

5.45 decaf::security_provider Namespace Reference

Namespaces

- namespace **unix**

Data Structures

- class **SecurityProvider**
- class **SecurityProviderMap**
Lookup Map for Connector Factories.
- class **SecurityProviderRegistrar**
Registers the passed in provider into the provider map, this class can manage the lifetime of the registered provider (default behaviour).

5.46 decaf::security_provider::unix Namespace Reference

Namespaces

- namespace **openssl**

5.47 decaf::security_provider::unix::openssl Namespace Reference

Data Structures

- class **OpenSSLX500Principal**
The `OpenSSLX500Principal` (p. 2287) wraps around an `OpenSSL X509_NAME` structure.
- class **OpenSSLX509Certificate**

5.48 decaf::util Namespace Reference

Namespaces

- namespace **comparators**
- namespace **concurrent**
- namespace **logging**

Data Structures

- class **AbstractCollection**
This class provides a skeletal implementation of the `Collection` (p. 982) interface, to minimize the effort required to implement this interface.
- class **AbstractList**
This class provides a skeletal implementation of the `List` (p. 1865) interface to minimize the effort required to implement this interface backed by a "random access" data store (such as an array).
- class **AbstractMap**

*This class provides a skeletal implementation of the **Map** (p. 1970) interface, to minimize the effort required to implement this interface.*

- class **AbstractQueue**

*This class provides skeletal implementations of some **Queue** (p. 2507) operations.*

- class **AbstractSequentialList**

*This class provides a skeletal implementation of the **List** (p. 1865) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list).*

- class **AbstractSet**

*This class provides a skeletal implementation of the **Set** (p. 2729) interface to minimize the effort required to implement this interface.*

- class **Collection**

The root interface in the collection hierarchy.

- class **Comparator**

A comparison function, which imposes a total ordering on some collection of objects.

- class **Date**

Wrapper class around a time value in milliseconds.

- class **Iterator**

Defines an object that can be used to iterate over the elements of a collection.

- class **List**

An ordered collection (also known as a sequence).

- class **ListIterator**

An iterator for lists that allows the programmer to traverse the list in either direction, modify the list during iteration, and obtain the iterator's current position in the list.

- class **Map**

***Map** (p. 1970) template that wraps around a `std::map` to provide a more user-friendly interface and to provide common functions that do not exist in `std::map`.*

- class **PriorityQueue**

An unbounded priority queue based on a binary heap algorithm.

- class **Properties**

Java-like properties class for mapping string names to string values.

- class **Queue**

A kind of collection provides advanced operations than other basic collections, such as insertion, extraction, and inspection.

- class **Random**

***Random** (p. 2513) Value Generator which is used to generate a stream of pseudorandom numbers.*

- class **Set**

A collection that contains no duplicate elements.

- class **StlList**

***List** (p. 1865) class that wraps the STL list object to provide a simpler interface and additional methods not provided by the STL type.*

- class **StlMap**

***Map** (p. 1970) template that wraps around a `std::map` to provide a more user-friendly interface and to provide common functions that do not exist in `std::map`.*

- class **StlQueue**

*The **Queue** (p. 2507) class accepts messages with an `psuh(m)` command where `m` is the message to be queued.*

- class **StlSet**

***Set** (p. 2729) template that wraps around a `std::set` to provide a more user-friendly interface and to provide common functions that do not exist in `std::set`.*

- class **StringTokenizer**

- class **Timer**

A facility for threads to schedule tasks for future execution in a background thread.

- class **TimerTask**

*A Base class for a task object that can be scheduled for one-time or repeated execution by a **Timer** (p. 2989).*

- class **UUID**

*A class that represents an immutable universally unique identifier (**UUID** (p. 3141)).*

Data Structures

- class **Less**

*Simple **Less** (p. 1862) **Comparator** (p. 1011) that compares to elements to determine if the first is less than the second.*

5.50 decaf::util::concurrent Namespace Reference

Namespaces

- namespace **atomic**
- namespace **locks**

Data Structures

- class **ConditionHandle**
- class **MutexHandle**
- class **BrokenBarrierException**
- class **Callable**

A task that returns a result and may throw an exception.

- class **CancellationException**
- class **ConcurrentMap**

*Interface for a **Map** (p. 1970) type that provides additional atomic putIfAbsent, remove, and replace methods alongside the already available **Map** (p. 1970) interface.*

- class **ConcurrentStlMap**

***Map** (p. 1970) template that wraps around a std::map to provide a more user-friendly interface and to provide common functions that do not exist in std::map.*

- class **CountDownLatch**
- class **Delayed**

A mix-in style interface for marking objects that should be acted upon after a given delay.

- class **ExecutionException**
- class **Executor**

*An object that executes submitted **decaf.lang Runnable** (p. 2642) tasks.*

- class **ExecutorService**

*An **Executor** (p. 1509) that provides methods to manage termination and methods that can produce a **Future** (p. 1597) for tracking progress of one or more asynchronous tasks.*

- class **Future**

*A **Future** (p. 1597) represents the result of an asynchronous computation.*

- class **Lock**

A wrapper class around a given synchronization mechanism that provides automatic release upon destruction.

- class **Mutex**

***Mutex** (p. 2239) object that offers recursive support on all platforms as well as providing the ability to use the standard wait / notify pattern used in languages like Java.*

- class **PooledThread**
- class **PooledThreadListener**

*Abstract Listener Interface for users of **ThreadPool** (p. 2977).*

- class **RejectedExecutionException**
- class **RejectedExecutionHandler**

*A handler for tasks that cannot be executed by a **ThreadPoolExecutor** (p. ??).*

- class **Semaphore**

A counting semaphore.

- class **Synchronizable**

The interface for all synchronizable objects (that is, objects that can be locked and unlocked).

- class **SynchronousQueue**

A `BlockingQueue` blocking queue} in which each insert operation must wait for a corresponding remove operation by another thread, and vice versa.

- class **TaskListener**

- class **ThreadFactory**

*public interface **ThreadFactory** (p. 2976)*

- class **ThreadPool**

Defines a Thread Pool object that implements the functionality of pooling threads to perform user tasks.

- class **TimeoutException**

- class **TimeUnit**

*A **TimeUnit** (p. 3005) represents time durations at a given unit of granularity and provides utility methods to convert across units, and to perform timing and delay operations in these units.*

Data Structures

- class **AtomicBoolean**

A boolean value that may be updated atomically.

- class **AtomicInteger**

An int value that may be updated atomically.

- class **AtomicReference**

An Pointer reference that may be updated atomically.

5.52 decaf::util::concurrent::locks Namespace Reference

Data Structures

- class **Condition**

***Condition** (p. 1040) factors out the **Mutex** (p. 2239) monitor methods (wait, notify and notifyAll) into distinct objects to give the effect of having multiple wait-sets per object, by combining them with the use of arbitrary **Lock** (p. 1898) implementations.*

- class **Lock**

***Lock** (p. 1898) implementations provide more extensive locking operations than can be obtained using synchronized statements.*

- class **LockSupport**

Basic thread blocking primitives for creating locks and other synchronization classes.

- class **ReadWriteLock**

*A **ReadWriteLock** (p. 2522) maintains a pair of associated locks, one for read-only operations and one for writing.*

- class **ReentrantLock**

*A reentrant mutual exclusion **Lock** (p. 1898) with extended capabilities.*

5.53 decaf::util::logging Namespace Reference

Data Structures

- class **Filter**

*A **Filter** (p. 1527) can be used to provide fine grain control over what is logged, beyond the control provided by log levels.*

- class **Formatter**

*A **Formatter** (p. 1595) provides support for formatting **LogRecords**.*

- class **Handler**

*A **Handler** (p. 1604) object takes log messages from a **Logger** (p. 1908) and exports them.*

- class **Logger**

- class **LoggerHierarchy**

- class **LogManager**

*There is a single global **LogManager** (p. 1923) object that is used to maintain a set of shared state about **Loggers** and log services.*

- class **LogRecord**

- class **LogWriter**

- class **MarkBlockLogger**

Defines a class that can be used to mark the entry and exit from scoped blocks.

- class **PropertiesChangeListener**

*Defines the interface that classes can use to listen for change events on **Properties** (p. 2494).*

- class **SimpleFormatter**

*Print a brief summary of the **LogRecord** (p. 1928) in a human readable format.*

- class **SimpleLogger**

- class **StreamHandler**

Enumerations

- enum **Level** {
 Off, **Null**, **Markblock**, **Debug**,
 Info, **Warn**, **Error**, **Fatal**,
 Throwing }
 Defines an enumeration for logging levels.

5.53.1 Enumeration Type Documentation

5.53.1.1 enum decaf::util::logging::Level

Defines an enumeration for logging levels.

Enumerator:

Off
Null
Markblock
Debug
Info
Warn
Error
Fatal

6.1 decaf::util::AbstractCollection< E > Class Template Reference

This class provides a skeletal implementation of the **Collection** (p. 982) interface, to minimize the effort required to implement this interface.

```
#include <src/main/decaf/util/AbstractCollection.h>
```

Inheritance diagram for decaf::util::AbstractCollection< E >:

Public Member Functions

- virtual **~AbstractCollection** ()
- **AbstractCollection**< E > & **operator=** (const **AbstractCollection**< E > &collection)
Assignment Operator, copy element from the source collection to this collection after clearing any element stored in this collection.
- virtual bool **add** (const E &value DECAF_UNUSED)
throw (lang::exceptions::UnsupportedOperationException,
lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException)
Ensures that this collection contains the specified element (optional operation).
- virtual bool **addAll** (const **Collection**< E > &collection)
throw (lang::exceptions::UnsupportedOperationException,
lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException)
Adds all of the elements in the specified collection to this collection (optional operation).
- virtual void **clear** () throw (lang::exceptions::UnsupportedOperationException)
Removes all of the elements from this collection (optional operation).
- virtual void **copy** (const **Collection**< E > &collection)
*Renders this **Collection** (p. 982) as a Copy of the given **Collection** (p. 982).*

- virtual bool **contains** (const E &value) const throw (lang::Exception)
Returns true if this collection contains the specified element.
- virtual bool **containsAll** (const **Collection**< E > &collection) const throw (lang::Exception)
Returns true if this collection contains all of the elements in the specified collection.
- virtual bool **equals** (const **Collection**< E > &collection) const
*Answers true if this **Collection** (p. 982) and the one given are the same size and if each element contained in the **Collection** (p. 982) given is equal to an element contained in this collection.*
- virtual bool **isEmpty** () const
Returns true if this collection contains no elements.
- virtual bool **remove** (const E &value) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)
Removes a single instance of the specified element from this collection, if it is present (optional operation).
- virtual bool **removeAll** (const **Collection**< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)
Removes all of this collection's elements that are also contained in the specified collection (optional operation).
- virtual bool **retainAll** (const **Collection**< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)
Retains only the elements in this collection that are contained in the specified collection (optional operation).
- virtual std::vector< E > **toArray** () const
*Answers an STL vector containing copies of all elements contained in this **Collection** (p. 982).*
- virtual void **lock** () throw (decaf::lang::exceptions::RuntimeException)
Locks the object.
- virtual bool **tryLock** () throw (decaf::lang::exceptions::RuntimeException)
Attempts to Lock the object, if the lock is already held by another thread than this method returns false.
- virtual void **unlock** () throw (decaf::lang::exceptions::RuntimeException)
Unlocks the object.
- virtual void **wait** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **wait** (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **wait** (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **notify** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals a waiter on this object that it can now wake up and continue.

- virtual void **notifyAll** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals the waiters on this object that it can now wake up and continue.

Protected Attributes

- util::concurrent::Mutex mutex

6.1.1 Detailed Description

template<typename E> class decaf::util::AbstractCollection< E >

This class provides a skeletal implementation of the **Collection** (p. 982) interface, to minimize the effort required to implement this interface. To implement an unmodifiable collection, the programmer needs only to extend this class and provide implementations for the iterator and size methods. (The iterator returned by the iterator method must implement hasNext and next.)

To implement a modifiable collection, the programmer must additionally override this class's add method (which otherwise throws an UnsupportedOperationException), and the iterator returned by the iterator method must additionally implement its remove method.

The programmer should generally provide a void (no argument) and **Collection** (p. 982) constructor, as per the recommendation in the **Collection** (p. 982) interface specification.

The documentation for each non-abstract method in this class describes its implementation in detail. Each of these methods may be overridden if the collection being implemented admits a more efficient implementation.

Since

1.0

6.1.2 Constructor & Destructor Documentation

6.1.2.1 `template<typename E> virtual decaf::util::AbstractCollection< E >::~~AbstractCollection () [inline, virtual]`

6.1.3 Member Function Documentation

6.1.3.1 `template<typename E> virtual bool decaf::util::AbstractCollection< E >::add (const E &value DECAF_UNUSED) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException) [inline, virtual]`

Ensures that this collection contains the specified element (optional operation).

Returns true if this collection changed as a result of the call. (Returns false if this collection does not permit duplicates and already contains the specified element.)

Collections that support this operation may place limitations on what elements may be added to this collection. **Collection** (p.982) classes should clearly specify in their documentation any restrictions on what elements may be added.

If a collection refuses to add a particular element for any reason other than that it already contains the element, it must throw an exception (rather than returning false). This preserves the invariant that a collection always contains the specified element after this call returns.

This implementation always throws an `UnsupportedOperationException`.

Parameters

value - The element that must be ensured to be in this collection.

Returns

true if the collection was changed as a result of this call.

Exceptions

UnsupportedOperationException if the add operation is not supported by this collection

IllegalArgumentException if some property of the element prevents it from being added to this collection

IllegalStateException if the element cannot be added at this time due to insertion restrictions

Referenced by `decaf::util::AbstractCollection< Pointer< BackupTransport > >::addAll()`, `decaf::util::AbstractCollection< Pointer< BackupTransport > >::copy()`, and `decaf::util::AbstractCollection< Pointer< BackupTransport > >::operator=()`.

6.1.3.2 `template<typename E> virtual bool decaf::util::AbstractCollection< E >::addAll (const Collection< E > & collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException) [inline, virtual]`

Adds all of the elements in the specified collection to this collection (optional operation).

The behavior of this operation is undefined if the specified collection is modified while the operation is in progress. (This implies that the behavior of this call is undefined if the specified collection is this collection, and this collection is nonempty.)

This implementation iterates over the specified collection, and adds each object returned by the iterator to this collection, in turn.

Note that this implementation will throw an `UnsupportedOperationException` unless `add` is overridden (assuming the specified collection is non-empty).

Parameters

collection - The **Collection** (p.982) whose elements are to be added to this **Collection** (p.982).

Returns

true if the collection was changed as a result of this call.

Exceptions

UnsupportedOperationException if the `addAll` operation is not supported by this collection

IllegalArgumentException if some property of the element prevents it from being added to this collection

IllegalStateException if the element cannot be added at this time due to insertion restrictions

Implements **decaf::util::Collection< E >** (p.985).

Reimplemented in **decaf::util::AbstractQueue< E >** (p.135).

```
6.1.3.3  template<typename E> virtual void decaf::util::AbstractCollection< E
>::clear (    ) throw ( lang::exceptions::UnsupportedOperationException )
[inline, virtual]
```

Removes all of the elements from this collection (optional operation).

The collection will be empty after this method returns.

This implementation iterates over this collection, removing each element using the **Iterator.remove** (p.1718) operation. Most implementations will probably choose to override this method for efficiency.

Note that this implementation will throw an `UnsupportedOperationException` if the iterator returned by this collection's iterator method does not implement the `remove` method and this collection is non-empty.

Exceptions

UnsupportedOperationException if the `clear` operation is not supported by this collection

Implements **decaf::util::Collection< E >** (p.985).

Reimplemented in **decaf::util::AbstractQueue< E >** (p.136), **decaf::util::PriorityQueue< E >** (p.2417), **decaf::util::StlList< E >** (p.2840), **decaf::util::StlSet< E >** (p.2869), **decaf::util::StlList< CompositeTask * >** (p.2840), **decaf::util::StlList< URI >** (p.2840),

decaf::util::StlList< Pointer< DestinationInfo > > (p. 2840), **decaf::util::StlList< PrimitiveValueNode >** (p. 2840), **decaf::util::StlList< Pointer< Command > >** (p. 2840), **decaf::util::StlList< Pointer< BackupTransport > >** (p. 2840), **decaf::util::StlSet< transport::TransportListener * >** (p. 2869), **decaf::util::StlSet< Pointer< Synchronization > >** (p. 2869), and **decaf::util::StlSet< ActiveMQSession * >** (p. 2869).

Referenced by **decaf::util::AbstractCollection< Pointer< BackupTransport > >::copy()**, and **decaf::util::AbstractCollection< Pointer< BackupTransport > >::operator=()**.

6.1.3.4 `template<typename E> virtual bool decaf::util::AbstractCollection< E >::contains (const E & value) const throw (lang::Exception) [inline, virtual]`

Returns true if this collection contains the specified element.

This implementation iterates over the elements in the collection, checking each element in turn for equality with the specified element.

Parameters

value - the value whose presence is to be queried for in this **Collection** (p. 982).

Returns

true if the value is contained in this collection

Exceptions

Exception if an error occurs,

Implements **decaf::util::Collection< E >** (p. 986).

Reimplemented in **decaf::util::StlList< E >** (p. 2840), **decaf::util::StlSet< E >** (p. 2869), **decaf::util::StlList< CompositeTask * >** (p. 2840), **decaf::util::StlList< URI >** (p. 2840), **decaf::util::StlList< Pointer< DestinationInfo > >** (p. 2840), **decaf::util::StlList< PrimitiveValueNode >** (p. 2840), **decaf::util::StlList< Pointer< Command > >** (p. 2840), **decaf::util::StlList< Pointer< BackupTransport > >** (p. 2840), **decaf::util::StlSet< transport::TransportListener * >** (p. 2869), **decaf::util::StlSet< Pointer< Synchronization > >** (p. 2869), and **decaf::util::StlSet< ActiveMQSession * >** (p. 2869).

Referenced by **decaf::util::AbstractCollection< Pointer< BackupTransport > >::containsAll()**.

6.1.3.5 `template<typename E> virtual bool decaf::util::AbstractCollection< E >::containsAll (const Collection< E > & collection) const throw (lang::Exception) [inline, virtual]`

Returns true if this collection contains all of the elements in the specified collection.

This implementation iterates over the specified collection, checking each element returned by the iterator in turn to see if it's contained in this collection. If all elements are so contained true is returned, otherwise false.

Parameters

collection collection to be checked for containment in this collection

Returns

true if this collection contains all of the elements in the specified collection.

Exceptions

Exception if an error occurs,

Implements **decaf::util::Collection< E >** (p. 986).

Referenced by **decaf::util::AbstractCollection< Pointer< BackupTransport > >::equals()**.

6.1.3.6 **template<typename E> virtual void decaf::util::AbstractCollection< E >::copy (const Collection< E > & collection) [inline, virtual]**

Renders this **Collection** (p. 982) as a Copy of the given **Collection** (p. 982).

This implementation iterates over the contents of the given collection adding each to this collection after first calling this **Collection**'s clear method.

Parameters

collection - the collection to mirror.

6.1.3.7 **template<typename E> virtual bool decaf::util::AbstractCollection< E >::equals (const Collection< E > & collection) const [inline, virtual]**

Answers true if this **Collection** (p. 982) and the one given are the same size and if each element contained in the **Collection** (p. 982) given is equal to an element contained in this collection.

Parameters

collection - The **Collection** (p. 982) to be compared to this one.

Returns

true if this **Collection** (p. 982) is equal to the one given.

Implements **decaf::util::Collection< E >** (p. 987).

6.1.3.8 **template<typename E> virtual bool decaf::util::AbstractCollection< E >::isEmpty () const [inline, virtual]**

Returns true if this collection contains no elements.

This implementation returns **size()** (p. 990) == 0.

Returns

true if the size method return 0.

Implements **decaf::util::Collection< E >** (p. 987).

Reimplemented in **decaf::util::StlList< E >** (p. 2841), **decaf::util::StlSet< E >** (p. 2870), **decaf::util::StlList< CompositeTask * >** (p. 2841), **decaf::util::StlList< URI >** (p. 2841),

`decaf::util::StlList< Pointer< DestinationInfo > >` (p. 2841), `decaf::util::StlList< PrimitiveValueNode >` (p. 2841), `decaf::util::StlList< Pointer< Command > >` (p. 2841), `decaf::util::StlList< Pointer< BackupTransport > >` (p. 2841), `decaf::util::StlSet< transport::TransportListener * >` (p. 2870), `decaf::util::StlSet< Pointer< Synchronization > >` (p. 2870), and `decaf::util::StlSet< ActiveMQSession * >` (p. 2870).

Referenced by `decaf::util::AbstractQueue< E >::clear()`.

6.1.3.9 `template<typename E> virtual void decaf::util::AbstractCollection< E >::lock () throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]`

Locks the object.

Exceptions

RuntimeException if an error occurs while locking the object.

Implements `decaf::util::concurrent::Synchronizable` (p. 2932).

6.1.3.10 `template<typename E> virtual void decaf::util::AbstractCollection< E >::notify () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]`

Signals a waiter on this object that it can now wake up and continue.

Must have this object locked before calling.

Exceptions

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying one of the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 2933).

6.1.3.11 `template<typename E> virtual void decaf::util::AbstractCollection< E >::notifyAll () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]`

Signals the waiters on this object that it can now wake up and continue.

Must have this object locked before calling.

Exceptions

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 2934).

6.1.3.12 `template<typename E> AbstractCollection<E>&
decaf::util::AbstractCollection< E >::operator= (const
AbstractCollection< E > & collection) [inline]`

Assignment Operator, copy element from the source collection to this collection after clearing any element stored in this collection.

Parameters

collection - the collection to copy

Returns

a reference to this collection

6.1.3.13 `template<typename E> virtual bool decaf::util::AbstractCollection<
E >::remove (const E & value) throw (
lang::exceptions::UnsupportedOperationException,
lang::exceptions::IllegalArgumentException) [inline, virtual]`

Removes a single instance of the specified element from this collection, if it is present (optional operation).

More formally, removes the first element *e* such that *e* == *o*, if this collection contains one or more such elements. Returns true if this collection contained the specified element (or equivalently, if this collection changed as a result of the call).

This implementation iterates over the collection looking for the specified element. If it finds the element, it removes the element from the collection using the iterator's remove method.

Note that this implementation throws an UnsupportedOperationException if the iterator returned by this collection's iterator method does not implement the remove method and this collection contains the specified object.

Parameters

value - element to be removed from this collection, if present

Returns

true if an element was removed as a result of this call

Exceptions

UnsupportedOperationException if the remove operation is not supported by this collection.

IllegalArgumentException If the value is not a valid entry for this **Collection** (p. 982).

Implements **decaf::util::Collection< E >** (p. 988).

Reimplemented in **decaf::util::PriorityQueue< E >** (p. 2419), **decaf::util::StlList< E >** (p. 2843), **decaf::util::StlSet< E >** (p. 2870), **decaf::util::StlList< CompositeTask * >** (p. 2843), **decaf::util::StlList< URI >** (p. 2843), **decaf::util::StlList< Pointer< DestinationInfo > >** (p. 2843), **decaf::util::StlList< PrimitiveValueNode >** (p. 2843), **decaf::util::StlList< Pointer< Command > >** (p. 2843), **decaf::util::StlList< Pointer< BackupTransport > >** (p. 2843), **decaf::util::StlSet< transport::TransportListener * >** (p. 2870), **decaf::util::StlSet< Pointer< Synchronization > >** (p. 2870), and **decaf::util::StlSet< ActiveMQSession * >** (p. 2870).

```

6.1.3.14  template<typename E> virtual bool decaf::util::AbstractCollection<
            E >::removeAll (  const Collection< E > &  collection  )
            throw ( lang::exceptions::UnsupportedOperationException,
                    lang::exceptions::IllegalArgumentException ) [inline, virtual]

```

Removes all of this collection's elements that are also contained in the specified collection (optional operation).

After this call returns, this collection will contain no elements in common with the specified collection.

This implementation iterates over this collection, checking each element returned by the iterator in turn to see if it's contained in the specified collection. If it's so contained, it's removed from this collection with the iterator's remove method.

Note that this implementation will throw an `UnsupportedOperationException` if the iterator returned by the iterator method does not implement the remove method and this collection contains one or more elements in common with the specified collection.

Parameters

collection - collection containing elements to be removed from this collection

Returns

true if this collection changed as a result of the call

Exceptions

UnsupportedOperationException if the remove operation is not supported by this collection

IllegalArgumentException.

Implements `decaf::util::Collection< E >` (p. 988).

Reimplemented in `decaf::util::AbstractSet< E >` (p. 139), `decaf::util::AbstractSet< transport::TransportListener * >` (p. 139), `decaf::util::AbstractSet< Pointer< Synchronization > >` (p. 139), and `decaf::util::AbstractSet< ActiveMQSession * >` (p. 139).

```

6.1.3.15  template<typename E> virtual bool decaf::util::AbstractCollection<
            E >::retainAll (  const Collection< E > &  collection  )
            throw ( lang::exceptions::UnsupportedOperationException,
                    lang::exceptions::IllegalArgumentException ) [inline, virtual]

```

Retains only the elements in this collection that are contained in the specified collection (optional operation).

In other words, removes from this collection all of its elements that are not contained in the specified collection.

This implementation iterates over this collection, checking each element returned by the iterator in turn to see if it's contained in the specified collection. If it's not so contained, it's removed from this collection with the iterator's remove method.

Note that this implementation will throw an `UnsupportedOperationException` if the iterator returned by the iterator method does not implement the remove method and this collection contains one or more elements not present in the specified collection.

Parameters

collection - collection containing elements to be retained in this collection

Returns

true if this collection changed as a result of the call

Exceptions

UnsupportedOperationException if the remove operation is not supported by this collection

IllegalArgumentException.

Implements **decaf::util::Collection< E >** (p. 989).

6.1.3.16 `template<typename E> virtual std::vector<E>
decaf::util::AbstractCollection< E >::toArray () const [inline,
virtual]`

Answers an STL vector containing copies of all elements contained in this **Collection** (p. 982).

All the elements in the array will not be referenced by the collection. The elements in the returned array will be sorted to the same order as those returned by the iterator of this collection itself if the collection guarantees the order.

Returns

an vector of copies of all the elements from this **Collection** (p. 982)

Implements **decaf::util::Collection< E >** (p. 990).

6.1.3.17 `template<typename E> virtual bool decaf::util::AbstractCollection< E
>::tryLock () throw (decaf::lang::exceptions::RuntimeException)
[inline, virtual]`

Attempts to Lock the object, if the lock is already held by another thread than this method returns false.

Returns

true if the lock was acquired, false if it is already held by another thread.

Exceptions

RuntimeException if an error occurs while locking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2935).

6.1.3.18 `template<typename E> virtual void decaf::util::AbstractCollection< E
>::unlock () throw (decaf::lang::exceptions::RuntimeException)
[inline, virtual]`

Unlocks the object.

Exceptions

RuntimeException if an error occurs while unlocking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2936).

```
6.1.3.19  template<typename E> virtual void decaf::util::AbstractCollection<
           E >::wait (      ) throw ( decaf::lang::exceptions::RuntimeException,
           decaf::lang::exceptions::IllegalMonitorStateException,
           decaf::lang::exceptions::InterruptedException ) [inline, virtual]
```

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling.

Exceptions

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2937).

```
6.1.3.20  template<typename E> virtual void decaf::util::AbstractCollection<
           E >::wait ( long long millisecs, int nanos )
           throw ( decaf::lang::exceptions::RuntimeException,
           decaf::lang::exceptions::IllegalArgumentOutOfRangeException,
           decaf::lang::exceptions::IllegalMonitorStateException,
           decaf::lang::exceptions::InterruptedException ) [inline, virtual]
```

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling. This wait will timeout after the specified time interval. This method is similar to the one argument wait function except that it add a finer grained control over the amount of time that it waits by adding in the additional nanosecond argument.

NOTE: The ability to wait accurately at a nanosecond scale depends on the platform and OS that the Decaf API is running on, some systems do not provide an accurate enough clock to provide this level of granularity.

Parameters

millisecs the time in milliseconds to wait, or WAIT_INFINITE

nanos additional time in nanoseconds with a range of 0-999999

Exceptions

IllegalArgumentOutOfRangeException if an error occurs or the nanos argument is not in the range of [0-999999]

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2940).

6.1.3.21 `template<typename E> virtual void decaf::util::AbstractCollection< E >::wait (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, virtual]`

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling. This wait will timeout after the specified time interval.

Parameters

millisecs the time in milliseconds to wait, or WAIT_INFINITE

Exceptions

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements `decaf::util::concurrent::Synchronizable` (p. 2938).

6.1.4 Field Documentation

6.1.4.1 `template<typename E> util::concurrent::Mutex decaf::util::AbstractCollection< E >::mutex [mutable, protected]`

6.2.1 Detailed Description

template<typename E> class decaf::util::AbstractList< E >

This class provides a skeletal implementation of the **List** (p.1865) interface to minimize the effort required to implement this interface backed by a "random access" data store (such as an array). For sequential access data (such as a linked list), **AbstractSequentialList** (p.137) should be used in preference to this class.

To implement an unmodifiable list, the programmer needs only to extend this class and provide implementations for the `get(int)` and `size()` (p.990) methods.

To implement a modifiable list, the programmer must additionally override the `set(int, E)` method (which otherwise throws an `UnsupportedOperationException`). If the list is variable-size the programmer must additionally override the `add(int, E)` and `remove(int)` methods.

The programmer should generally provide a void (no argument) and collection constructor, as per the recommendation in the **Collection** (p.982) interface specification.

Unlike the other abstract collection implementations, the programmer does not have to provide an iterator implementation; the iterator and list iterator are implemented by this class, on top of the "random access" methods: `get(int)`, `set(int, E)`, `add(int, E)` and `remove(int)`.

The documentation for each non-abstract method in this class describes its implementation in detail. Each of these methods may be overridden if the collection being implemented admits a more efficient implementation.

6.3 decaf::util::AbstractMap< K, V, COMPARATOR > Class Template Reference

This class provides a skeletal implementation of the **Map** (p.1970) interface, to minimize the effort required to implement this interface.

`#include <src/main/decaf/util/AbstractMap.h>`

Inheritance diagram for `decaf::util::AbstractMap< K, V, COMPARATOR >`:

Public Member Functions

- `virtual ~AbstractMap ()`

6.3.1 Detailed Description

```
template<typename K, typename V, typename COMPARATOR> class
decaf::util::AbstractMap< K, V, COMPARATOR >
```

This class provides a skeletal implementation of the **Map** (p. 1970) interface, to minimize the effort required to implement this interface. To implement an unmodifiable map, the programmer needs only to extend this class and provide an implementation for the `entrySet` method, which returns a set-view of the map's mappings. Typically, the returned set will, in turn, be implemented atop **AbstractSet** (p. 138). This set should not support the `add` or `remove` methods, and its iterator should not support the `remove` method.

To implement a modifiable map, the programmer must additionally override this class's `put` method (which otherwise throws an `UnsupportedOperationException`), and the iterator returned by `entrySet().iterator()` must additionally implement its `remove` method.

The programmer should generally provide a void (no argument) and map constructor, as per the recommendation in the **Map** (p. 1970) interface specification.

The documentation for each non-abstract method in this class describes its implementation in detail. Each of these methods may be overridden if the map being implemented admits a more efficient implementation.

6.4 decaf::util::AbstractQueue< E > Class Template Reference

This class provides skeletal implementations of some **Queue** (p. 2507) operations.

```
#include <src/main/decaf/util/AbstractQueue.h>
```

Inheritance diagram for `decaf::util::AbstractQueue< E >`:

Public Member Functions

- `AbstractQueue()`
- `virtual ~AbstractQueue()`

- virtual bool **add** (const E &value) throw (decaf::lang::exceptions::UnsupportedOperationException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalStateException)

Inserts the specified element into this queue if it is possible to do so immediately without violating capacity restrictions, returning true upon success and throwing an IllegalStateException if no space is currently available.

- virtual bool **addAll** (const Collection< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException)

Adds all the elements of a collection to the queue.

- virtual E **remove** () throw (decaf::lang::exceptions::NoSuchElementException)

Retrieves and removes the head of this queue.

- virtual E **element** () const throw (decaf::lang::exceptions::NoSuchElementException)

Retrieves, but does not remove, the head of this queue.

- virtual void **clear** () throw (lang::exceptions::UnsupportedOperationException)

Removes all elements of the queue.

6.4.1 Detailed Description

template<typename E> class decaf::util::AbstractQueue< E >

This class provides skeletal implementations of some **Queue** (p.2507) operations. Methods add, remove, and element are based on offer, poll, and peek, respectively.

A **Queue** (p. 2507) implementation that extends this class must minimally define a method **Queue** (p. 2507). **offer(E)** which does not permit insertion of null elements, along with methods **Queue** (p. 2507). **peek()** (p. 2509), **Queue.poll()** (p. 2509), **Collection.size()** (p. 990), and a **Collection.iterator()** (p. 1716) supporting **Iterator.remove()** (p. 1718). Typically, additional methods will be overridden as well. If these requirements cannot be met, consider instead subclassing **AbstractCollection** (p. 119).

Since

1.0

6.4.2 Constructor & Destructor Documentation

6.4.2.1 `template<typename E > decaf::util::AbstractQueue< E >::AbstractQueue () [inline]`

6.4.2.2 `template<typename E > virtual decaf::util::AbstractQueue< E >::~~AbstractQueue () [inline, virtual]`

6.4.3 Member Function Documentation

6.4.3.1 `template<typename E > virtual bool decaf::util::AbstractQueue< E >::add (const E & value) throw (decaf::lang::exceptions::UnsupportedOperationException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalStateException) [inline, virtual]`

Inserts the specified element into this queue if it is possible to do so immediately without violating capacity restrictions, returning true upon success and throwing an `IllegalStateException` if no space is currently available.

This implementation returns true if offer succeeds, else throws an `IllegalStateException`.

Parameters

value - the element to offer to the **Queue** (p. 2507).

Returns

true if the add succeeds.

Exceptions

IllegalArgumentException if the element cannot be added.

Implements `decaf::util::Collection< E >` (p. 984).

Reimplemented in `decaf::util::PriorityQueue< E >` (p. 2416).

References `decaf::util::Queue< E >::offer()`.

6.4.3.2 `template<typename E > virtual bool decaf::util::AbstractQueue< E >::addAll (const Collection< E > & collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException) [inline, virtual]`

Adds all the elements of a collection to the queue.

If the collection is the queue itself, then an `IllegalArgumentException` will be thrown out. If during the process, some runtime exception is thrown out, then part of the elements in the collection that have successfully added will remain in the queue.

The result of the method is undefined if the collection is modified during the process of the method.

Parameters

collection - the collection to be added to the queue.

Returns

true if the operation succeeds.

Exceptions

IllegalArgumentException If the collection to be added to the queue is the queue itself.

Reimplemented from **decaf::util::AbstractCollection**< **E** > (p. 122).

6.4.3.3 `template<typename E> virtual void decaf::util::AbstractQueue< E >::clear () throw (lang::exceptions::UnsupportedOperationException) [inline, virtual]`

Removes all elements of the queue.

This implementation repeatedly invokes poll until it returns the empty marker.

Reimplemented from **decaf::util::AbstractCollection**< **E** > (p. 123).

Reimplemented in **decaf::util::PriorityQueue**< **E** > (p. 2417).

References **decaf::util::AbstractCollection**< **E** >::isEmpty(), and **decaf::util::Queue**< **E** >::poll().

6.4.3.4 `template<typename E> virtual E decaf::util::AbstractQueue< E >::element () const throw (decaf::lang::exceptions::NoSuchElementException) [inline, virtual]`

Retrieves, but does not remove, the head of this queue.

This method differs from peek only in that it throws an exception if this queue is empty.

This implementation returns the result of peek unless the queue is empty.

Returns

the element in the head of the queue.

Exceptions

NoSuchElementException if the queue is empty.

Implements **decaf::util::Queue**< **E** > (p. 2508).

References **decaf::util::Queue**< **E** >::peek().

6.4.3.5 `template<typename E> virtual E decaf::util::AbstractQueue< E >::remove () throw (decaf::lang::exceptions::NoSuchElementException) [inline, virtual]`

Retrieves and removes the head of this queue.

This method differs from poll only in that it throws an exception if this queue is empty.

This implementation returns the result of poll unless the queue is empty.

Returns

a copy of the element in the head of the queue.

Exceptions

NoSuchElementException if the queue is empty.

Implements **decaf::util::Queue< E >** (p. 2510).

Reimplemented in **decaf::util::PriorityQueue< E >** (p. 2419).

References **decaf::util::Queue< E >::poll()**.

The documentation for this class was generated from the following file:

6.5 decaf::util::AbstractSequentialList< E > Class Template Reference

This class provides a skeletal implementation of the **List** (p. 1865) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list).

```
#include <src/main/decaf/util/AbstractSequentialList.h>
```

Inheritance diagram for **decaf::util::AbstractSequentialList< E >**:

Public Member Functions

- `virtual ~AbstractSequentialList ()`

6.5.1 Detailed Description

```
template<typename E> class decaf::util::AbstractSequentialList< E >
```

This class provides a skeletal implementation of the **List** (p. 1865) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list). For random access data (such as an array), **AbstractList** (p. 131) should be used in preference to this class.

This class is the opposite of the **AbstractList** (p. 131) class in the sense that it implements the "random access" methods (`get(int index)`, `set(int index, E element)`, `add(int index, E element)` and `remove(int index)`) on top of the list's list iterator, instead of the other way around.

To implement a list the programmer needs only to extend this class and provide implementations for the list iterator and size methods. For an unmodifiable list, the programmer need only implement the list iterator's `hasNext`, `next`, `hasPrevious`, `previous` and `index` methods.

For a modifiable list the programmer should additionally implement the list iterator's `set` method. For a variable-size list the programmer should additionally implement the list iterator's `remove` and `add` methods.

The programmer should generally provide a void (no argument) and collection constructor, as per the recommendation in the **Collection** (p. 982) interface specification.

6.6 decaf::util::AbstractSet< E > Class Template Reference

This class provides a skeletal implementation of the **Set** (p. 2729) interface to minimize the effort required to implement this interface.

```
#include <src/main/decaf/util/AbstractSet.h>
```

Inheritance diagram for `decaf::util::AbstractSet< E >`:

Public Member Functions

- `virtual ~AbstractSet ()`
- `virtual bool removeAll (const Collection< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)`

Removes from this set all of its elements that are contained in the specified collection (optional operation).

6.6.1 Detailed Description

`template<typename E> class decaf::util::AbstractSet< E >`

This class provides a skeletal implementation of the **Set** (p. 2729) interface to minimize the effort required to implement this interface. The process of implementing a set by extending this class is identical to that of implementing a **Collection** (p. 982) by extending **AbstractCollection** (p. 119), except that all of the methods and constructors in subclasses of this class must obey the additional constraints imposed by the **Set** (p. 2729) interface (for instance, the add method must not permit addition of multiple instances of an object to a set).

Since

1.0

6.6.2 Constructor & Destructor Documentation

6.6.2.1 `template<typename E> virtual decaf::util::AbstractSet< E >::~~AbstractSet () [inline, virtual]`

6.6.3 Member Function Documentation

6.6.3.1 `template<typename E> virtual bool decaf::util::AbstractSet< E >::removeAll (const Collection< E > & collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException) [inline, virtual]`

Removes from this set all of its elements that are contained in the specified collection (optional operation).

If the specified collection is also a set, this operation effectively modifies this set so that its value is the asymmetric set difference of the two sets.

This implementation determines which is the smaller of this set and the specified collection, by invoking the size method on each. If this set has fewer elements, then the implementation iterates over this set, checking each element returned by the iterator in turn to see if it is contained in the specified collection. If it is so contained, it is removed from this set with the iterator's remove method. If the specified collection has fewer elements, then the implementation iterates over the specified collection, removing from this set each element returned by the iterator, using this set's remove method.

Note that this implementation will throw an UnsupportedOperationException if the iterator returned by the iterator method does not implement the remove method.

Parameters

collection - The **Collection** (p. 982) whose elements are to be retained

Returns

true if the collection changed as a result of this call

Exceptions

UnsupportedOperationException

IllegalArgumentException

Reimplemented from **decaf::util::AbstractCollection< E >** (p. 128).

The documentation for this class was generated from the following file:

- `src/main/decaf/util/AbstractSet.h`

6.7 activemq::transport::AbstractTransportFactory Class Reference

Abstract implementation of the **TransportFactory** (p. 3071) interface, providing the base functionality that's common to most of the **TransportFactory** (p. 3071) instances.

```
#include <src/main/activemq/transport/AbstractTransportFactory.h>
```

- 6.7.3.1** `virtual Pointer<wireformat::WireFormat> activemq::transport::AbstractTransportFactory::createWireFormat (const decaf::util::Properties & properties) throw (decaf::lang::exceptions::NoSuchElementException) [protected, virtual]`

Creates the WireFormat that is configured for this **Transport** (p. 3066) and returns it.

The default WireFormat is Openwire.

Parameters

properties The properties that were configured on the URI.

Returns

a pointer to a WireFormat instance that the caller then owns.

Exceptions

NoSuchElementException if the configured WireFormat is not found.

The documentation for this class was generated from the following file:

- `src/main/activemq/transport/AbstractTransportFactory.h`

6.8 activemq::core::ActiveMQAckHandler Class Reference

Interface class that is used to give CMS Messages an interface to Ack themselves with.

```
#include <src/main/activemq/core/ActiveMQAckHandler.h>
```

Public Member Functions

- virtual `~ActiveMQAckHandler()`
- virtual void `acknowledgeMessage` (const `commands::Message *message`)=0 throw (`cms::CMSEException`)

Method called to acknowledge the message passed.

6.8.1 Detailed Description

Interface class that is used to give CMS Messages an interface to Ack themselves with.

Since

2.0

6.8.2 Constructor & Destructor Documentation

- 6.8.2.1 virtual `activemq::core::ActiveMQAckHandler::~ActiveMQAckHandler ()`

6.9.1 Constructor & Destructor Documentation

6.9.1.1 `activemq::commands::ActiveMQBlobMessage::ActiveMQBlobMessage ()`

6.9.1.2 `virtual
activemq::commands::ActiveMQBlobMessage::~~ActiveMQBlobMessage ()` [inline, virtual]

6.9.2 Member Function Documentation

6.9.2.1 `virtual cms::Message* activemq::commands::ActiveMQBlobMessage::clone () const` [inline, virtual]

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns

new copy of this message

6.9.2.2 `virtual ActiveMQBlobMessage* activemq::commands::ActiveMQBlobMessage::cloneDataStructure () const` [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2023).

6.9.2.3 `virtual void activemq::commands::ActiveMQBlobMessage::copyDataStructure (const DataStructure * src)` [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2023).

6.9.2.4 `virtual bool activemq::commands::ActiveMQBlobMessage::equals (const DataStructure * value) const` [virtual]

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::Message >` (p. 331).

6.9.2.5 `virtual unsigned char activemq::commands::ActiveMQBlobMessage::getDataStructureType () const` [virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns

new `DataStructure` (p. 1372) type copy.

Reimplemented from `activemq::commands::Message` (p. 2025).

6.9.2.6 `std::string activemq::commands::ActiveMQBlobMessage::getMimeType () const` [inline]

Get the Mime Type of the Blob.

Returns

string holding the MIME Type.

6.9.2.7 `std::string activemq::commands::ActiveMQBlobMessage::getName () const` [inline]

Gets the Name of the Blob.

Returns

string name of the Blob.

6.9.2.8 `std::string activemq::commands::ActiveMQBlobMessage::getRemoteBlobUrl () const` [inline]

Get the Remote URL of the Blob.

Returns

string from of the Remote Blob URL.

6.9.2.9 `bool activemq::commands::ActiveMQBlobMessage::isDeletedByBroker () const` [inline]

Gets if this Blob is deleted by the Broker.

Returns

true if the Blob is deleted by the Broker.

6.9.2.10 `void activemq::commands::ActiveMQBlobMessage::setDeletedByBroker (bool value)` [inline]

Sets the Deleted By Broker flag.

Parameters

value - set the Delete by broker flag to value.

6.9.2.11 `void activemq::commands::ActiveMQBlobMessage::setMimeType (const std::string & mimeType)` [inline]

Set the Mime Type of the Blob.

Parameters

mimeType - String holding the MIME Type.

6.9.2.12 `void activemq::commands::ActiveMQBlobMessage::setName (const std::string & name)` [inline]

Sets the Name of the Blob.

Parameters

name - Name of the Blob.

6.9.2.13 `void activemq::commands::ActiveMQBlobMessage::setRemoteBlobUrl (const std::string & remoteURL) [inline]`

Set the Remote URL of the Blob.

Parameters

remoteURL - String form of the Remote URL.

6.9.2.14 `virtual std::string activemq::commands::ActiveMQBlobMessage::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p.1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2033).

6.9.3 Field Documentation

6.9.3.1 `const std::string activemq::commands::ActiveMQBlobMessage::BINARY_MIME_TYPE [static]`

6.9.3.2 `const unsigned char activemq::commands::ActiveMQBlobMessage::ID_ACTIVEMQBLOBMESSAGE = 29 [static]`

Creates a new instance of this marshalable type.

- virtual unsigned char **getDataStructureType** () const

Get the Data Structure Type that identifies this Marshaler.

- virtual void **tightUnmarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)

Un-marshall an object instance from the data input stream.

- virtual int **tightMarshal1** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Un-marshall an object instance from the data input stream.

- virtual void **looseMarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.10.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQBlobMessageMarshaller** (p.146).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.10.2 Constructor & Destructor Documentation

6.10.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::ActiveMQBlobMessageMarshaller () [inline]`

6.10.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::~~ActiveMQBlobMessageMarshaller () [inline, virtual]`

6.10.3 Member Function Documentation

6.10.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.10.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.10.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.10.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.10.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2177).

6.10.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

```
6.10.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQBlobMessageMarshaller.h`

6.11 `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQBlobMessageMarshaller` (p. 150).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQBlobMessageMarshaller.h>
```

6.11.2 Constructor & Destructor Documentation

6.11.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::ActiveMQBlobMessageMarshaller () [inline]`

6.11.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::~~ActiveMQBlobMessageMarshaller () [inline, virtual]`

6.11.3 Member Function Documentation

6.11.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.11.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.11.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.11.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.11.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2185).

6.11.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

```
6.11.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

6.13.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.13.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.13.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.13.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.13.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2181).

6.13.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

```
6.13.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.14.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.14.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167).

6.14.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168).

6.14.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

6.14.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.14.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2170).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQBlobMessageMarshaller.h`

6.15 `activemq::commands::ActiveMQBytesMessage` Class Reference

```
#include <src/main/activemq/commands/ActiveMQBytesMessage.h>
```

Inheritance diagram for `activemq::commands::ActiveMQBytesMessage`:

Public Member Functions

- **ActiveMQBytesMessage** ()
- virtual **~ActiveMQBytesMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual **ActiveMQBytesMessage * cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual **cms::BytesMessage * clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual void **clearBody** () throw (cms::CMSEException)
Clears out the body of the message.
- virtual void **onSend** ()
Store the Data that was written to the stream before a send.
- virtual void **setBodyBytes** (const unsigned char *buffer, std::size_t numBytes) throw (cms::MessageNotWriteableException, cms::CMSEException)
sets the bytes given to the message body.
- virtual unsigned char * **getBodyBytes** () const throw (cms::MessageNotReadableException, cms::CMSEException)
Gets the bytes that are contained in this message, user should copy this data into a user allocated buffer.
- virtual std::size_t **getBodyLength** () const throw (cms::MessageNotReadableException, cms::CMSEException)
Returns the number of bytes contained in the body of this message.
- virtual void **reset** () throw (cms::MessageFormatException, cms::CMSEException)
Puts the message body in read-only mode and repositions the stream of bytes to the beginning.
- virtual bool **readBoolean** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Boolean from the Bytes message stream.

- virtual void **writeBoolean** (bool value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a boolean to the bytes message stream as a 1-byte value.
- virtual unsigned char **readByte** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Byte from the Bytes message stream.
- virtual void **writeByte** (unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte to the bytes message stream as a 1-byte value.
- virtual std::size_t **readBytes** (std::vector< unsigned char > &value) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a byte array from the bytes message stream.
- virtual void **writeBytes** (const std::vector< unsigned char > &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte array to the bytes message stream using the vector size as the number of bytes to write.
- virtual std::size_t **readBytes** (unsigned char *buffer, std::size_t length) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a portion of the bytes message stream.
- virtual void **writeBytes** (const unsigned char *value, std::size_t offset, std::size_t length) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a portion of a byte array to the bytes message stream.
- virtual char **readChar** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Char from the Bytes message stream.
- virtual void **writeChar** (char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a char to the bytes message stream as a 1-byte value.
- virtual float **readFloat** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 32 bit float from the Bytes message stream.
- virtual void **writeFloat** (float value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a float to the bytes message stream as a 4 byte value.
- virtual double **readDouble** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 64 bit double from the Bytes message stream.
- virtual void **writeDouble** (double value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a double to the bytes message stream as a 8 byte value.

- virtual short **readShort** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 16 bit signed short from the Bytes message stream.

- virtual void **writeShort** (short value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a signed short to the bytes message stream as a 2 byte value.

- virtual unsigned short **readUnsignedShort** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 16 bit unsigned short from the Bytes message stream.

- virtual void **writeUnsignedShort** (unsigned short value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a unsigned short to the bytes message stream as a 2 byte value.

- virtual int **readInt** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 32 bit signed integer from the Bytes message stream.

- virtual void **writeInt** (int value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a signed int to the bytes message stream as a 4 byte value.

- virtual long long **readLong** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 64 bit long from the Bytes message stream.

- virtual void **writeLong** (long long value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a long long to the bytes message stream as a 8 byte value.

- virtual std::string **readString** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads an ASCII String from the Bytes message stream.

- virtual void **writeString** (const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes an ASCII String to the Bytes message stream.

- virtual std::string **readUTF** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads an UTF String from the BytesMessage stream.

- virtual void **writeUTF** (const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes an UTF String to the BytesMessage stream.

Static Public Attributes

- static const unsigned char `ID_ACTIVEMQBYTESMESSAGE` = 24

6.15.1 Constructor & Destructor Documentation

6.15.1.1 `activemq::commands::ActiveMQBytesMessage::ActiveMQBytesMessage ()`

6.15.1.2 `virtual activemq::commands::ActiveMQBytesMessage::~~ActiveMQBytesMessage () [virtual]`

6.15.2 Member Function Documentation

6.15.2.1 `virtual void activemq::commands::ActiveMQBytesMessage::clearBody () throw (cms::CMSException) [virtual]`

Clears out the body of the message.

This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::BytesMessage >` (p. 331).

6.15.2.2 `virtual cms::BytesMessage* activemq::commands::ActiveMQBytesMessage::clone () const [inline, virtual]`

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns

new copy of this message

6.15.2.3 `virtual ActiveMQBytesMessage* activemq::commands::ActiveMQBytesMessage::cloneDataStructure () const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2023).

6.15.2.4 `virtual void activemq::commands::ActiveMQBytesMessage::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2023).

6.15.2.5 `virtual bool activemq::commands::ActiveMQBytesMessage::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Parameters

value The `Command` (p. 991) to compare to this one.

Returns

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::BytesMessage >` (p. 331).

6.15.2.6 `virtual unsigned char* activemq::commands::ActiveMQBytesMessage::getBodyBytes () const throw (cms::MessageNotReadableException, cms::CMSException) [virtual]`

Gets the bytes that are contained in this message, user should copy this data into a user allocated buffer.

Call `getBodyLength` to determine the number of bytes to expect.

Returns

const pointer to a byte buffer

Exceptions

CMSException - If an internal error occurs.

MessageNotReadableException - If the message is in Write Only Mode.

6.15.2.7 `virtual std::size_t activemq::commands::ActiveMQBytesMessage::getBodyLength () const throw (cms::MessageNotReadableException, cms::CMSException) [virtual]`

Returns the number of bytes contained in the body of this message.

Returns

number of bytes.

Exceptions

CMSException - If an internal error occurs.

MessageNotReadableException - If the message is in Write Only Mode.

6.15.2.8 `virtual unsigned char activemq::commands::ActiveMQBytesMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns

new **DataStructure** (p. 1372) type copy.

Reimplemented from **activemq::commands::Message** (p. 2025).

6.15.2.9 `virtual void activemq::commands::ActiveMQBytesMessage::onSend () [virtual]`

Store the Data that was written to the stream before a send.

Reimplemented from **activemq::commands::ActiveMQMessageTemplate<cms::BytesMessage>** (p. 338).

6.15.2.10 `virtual bool activemq::commands::ActiveMQBytesMessage::readBoolean () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a Boolean from the Bytes message stream.

Returns

boolean value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.11 `virtual unsigned char activemq::commands::ActiveMQBytesMessage::readByte () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a Byte from the Bytes message stream.

Returns

unsigned char value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.12 `virtual std::size_t activemq::commands::ActiveMQBytesMessage::readBytes (std::vector< unsigned char > & value) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a byte array from the bytes message stream.

If the length of vector value is less than the number of bytes remaining to be read from the stream, the vector should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of vector value, the bytes should be read into the vector. The return value of the total number of bytes read will be less than the length of the vector, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

Parameters

value buffer to place data in

Returns

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.13 `virtual std::size_t activemq::commands::ActiveMQBytesMessage::readBytes (unsigned char * buffer, std::size_t length) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a portion of the bytes message stream.

If the length of array value is less than the number of bytes remaining to be read from the stream, the array should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of array value, the bytes should be read into the array. The return value of the total number of bytes read will be less than the length of the array, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

If length is negative, or length is greater than the length of the array value, then an `IndexOutOfBoundsException` is thrown. No bytes will be read from the stream for this exception case.

Parameters

buffer the buffer into which the data is read

length the number of bytes to read; must be less than or equal to value.length

Returns

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.14 virtual char activemq::commands::ActiveMQBytesMessage::readChar
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSEException) [virtual]

Reads a Char from the Bytes message stream.

Returns

char value from stream

Exceptions

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.15 virtual double ac-
tivismq::commands::ActiveMQBytesMessage::readDouble
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSEException) [virtual]

Reads a 64 bit double from the Bytes message stream.

Returns

double value from stream

Exceptions

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.16 virtual float activemq::commands::ActiveMQBytesMessage::readFloat
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 32 bit float from the Bytes message stream.

Returns

double value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.17 virtual int activemq::commands::ActiveMQBytesMessage::readInt
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 32 bit signed integer from the Bytes message stream.

Returns

int value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.18 virtual long long ac-
tivemq::commands::ActiveMQBytesMessage::readLong
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 64 bit long from the Bytes message stream.

Returns

long long value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.19 virtual short activemq::commands::ActiveMQBytesMessage::readShort
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 16 bit signed short from the Bytes message stream.

Returns

short value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.20 virtual std::string ac-
tivismq::commands::ActiveMQBytesMessage::readString
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads an ASCII String from the Bytes message stream.

Returns

String from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.21 virtual unsigned short ac-
tivismq::commands::ActiveMQBytesMessage::readUnsignedShort
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 16 bit unsigned short from the Bytes message stream.

Returns

unsigned short value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.22 virtual std::string activemq::commands::ActiveMQBytesMessage::readUTF () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads an UTF String from the BytesMessage stream.

Returns

String from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.2.23 virtual void activemq::commands::ActiveMQBytesMessage::reset () throw (cms::MessageFormatException, cms::CMSException) [virtual]

Puts the message body in read-only mode and repositions the stream of bytes to the beginning.

Exceptions

CMSException - If the provider fails to perform the reset operation.

MessageFormatException - If the **Message** (p. 2018) has an invalid format.

6.15.2.24 virtual void activemq::commands::ActiveMQBytesMessage::setBodyBytes (const unsigned char * *buffer*, std::size_t *numBytes*) throw (cms::MessageNotWritableException, cms::CMSException) [virtual]

sets the bytes given to the message body.

Parameters

buffer Byte Buffer to copy

numBytes Number of bytes in Buffer to copy

Exceptions

CMSException - If an internal error occurs.

MessageNotWritableException - if in Read Only Mode.

6.15.2.25 virtual std::string activemq::commands::ActiveMQBytesMessage::toString () const [virtual]

Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2033).

6.15.2.26 `virtual void activemq::commands::ActiveMQBytesMessage::writeBoolean (bool value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a boolean to the bytes message stream as a 1-byte value.

The value true is written as the value (byte)1; the value false is written as the value (byte)0.

Parameters

value boolean to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.27 `virtual void activemq::commands::ActiveMQBytesMessage::writeByte (unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a byte to the bytes message stream as a 1-byte value.

Parameters

value byte to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.28 `virtual void activemq::commands::ActiveMQBytesMessage::writeBytes (const unsigned char * value, std::size_t offset, std::size_t length) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a portion of a byte array to the bytes message stream.

size as the number of bytes to write.

Parameters

value bytes to write to the stream

offset the initial offset within the byte array

length the number of bytes to use

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.29 virtual void activemq::commands::ActiveMQBytesMessage::writeBytes
(const std::vector< unsigned char > & *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a byte array to the bytes message stream using the vector size as the number of bytes to write.

Parameters

value bytes to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.30 virtual void activemq::commands::ActiveMQBytesMessage::writeChar
(char *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a char to the bytes message stream as a 1-byte value.

Parameters

value char to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.31 virtual void activemq::commands::ActiveMQBytesMessage::writeDouble
(double *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a double to the bytes message stream as a 8 byte value.

Parameters

value double to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.32 virtual void activemq::commands::ActiveMQBytesMessage::writeFloat
(float *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a float to the bytes message stream as a 4 byte value.

Parameters

value float to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.33 virtual void activemq::commands::ActiveMQBytesMessage::writeInt
(int *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a signed int to the bytes message stream as a 4 byte value.

Parameters

value signed int to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.34 virtual void activemq::commands::ActiveMQBytesMessage::writeLong
(long long *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a long long to the bytes message stream as a 8 byte value.

Parameters

value signed long long to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.35 virtual void activemq::commands::ActiveMQBytesMessage::writeShort
(short *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a signed short to the bytes message stream as a 2 byte value.

Parameters

value signed short to write to the stream

Exceptions

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.36 virtual void activemq::commands::ActiveMQBytesMessage::writeString (const std::string & *value*) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]

Writes an ASCII String to the Bytes message stream.

Parameters

value String to write to the stream

Exceptions

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.37 virtual void activemq::commands::ActiveMQBytesMessage::writeUnsignedShort (unsigned short *value*) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]

Writes a unsigned short to the bytes message stream as a 2 byte value.

Parameters

value unsigned short to write to the stream

Exceptions

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.15.2.38 virtual void activemq::commands::ActiveMQBytesMessage::writeUTF (const std::string & *value*) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]

Writes an UTF String to the BytesMessage stream.

Parameters

value String to write to the stream

Exceptions

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

6.15.3 Field Documentation

6.15.3.1 `const unsigned char activemq::commands::ActiveMQBytesMessage::ID - ACTIVEMQBYTESMESSAGE = 24` [static]

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQBytesMessage.h`

6.16 `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQBytesMessageMarshaller` (p. 182).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQBytesMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller`:

Public Member Functions

- `ActiveMQBytesMessageMarshaller ()`
- `virtual ~ActiveMQBytesMessageMarshaller ()`
- `virtual commands::DataStructure * createObject () const`
Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaller.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshall an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`
Un-marshall an object instance from the data input stream.

6.16

6.16.2 Constructor & Destructor Documentation

6.16.2.1 **activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::ActiveMQBytesMessageMarshaller** () [inline]

6.16.2.2 **virtual**
activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::~~ActiveMQBytesMessageMarshaller () [inline, virtual]

6.16.3 Member Function Documentation

6.16.3.1 **virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::createObject** () const [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.16.3.2 **virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::getDataStructureType** () const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.16.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.16.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.16.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

6.16

activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller

Class Reference

187

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2177).

6.16.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2178).

6.16.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

The documentation for this class was generated from the following file:

6.17.3 Member Function Documentation

6.17.3.1 **virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::createObject () const** [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p.1331).

6.17.3.2 **virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::getDataStructureType () const** [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p.1336).

6.17.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.17.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.17.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

6.17

activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller

Class Reference

191

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2185).

6.17.3.6 virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::tightMarshal
(OpenWireFormat * *wireFormat*, commands::DataStructure
* *dataStructure*, decaf::io::DataOutputStream * *dataOut*,
utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2186).

6.17.3.7 virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::tightUnmarshal
(OpenWireFormat * *wireFormat*, commands::DataStructure
* *dataStructure*, decaf::io::DataInputStream * *dataIn*,
utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

Un-marshal an object instance from the data input stream.

- virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.20.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQBytesMessageMarshaller** (p.198).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.20.2 Constructor & Destructor Documentation

6.20.2.1 activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::ActiveMQBytesMessageMarshaller () [inline]

6.20.2.2 virtual activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::~~ActiveMQBytesMessageMarshaller () [inline, virtual]

6.20.3 Member Function Documentation

6.20.3.1 virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::createObject () const [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p.1331).

6.20.3.2 virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::getDataStructureType () const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p.1336).

6.20.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167).

6.20.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168).

6.20.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

6.20

activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller

Class Reference

203

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2169).

6.20.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2169).

6.20.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2170).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQBytesMessageMarshaller.h`

6.21 activemq::core::ActiveMQConnection Class Reference

Concrete connection used for all connectors to the ActiveMQ broker.

```
#include <src/main/activemq/core/ActiveMQConnection.h>
```

Inheritance diagram for `activemq::core::ActiveMQConnection`:

Public Member Functions

- **ActiveMQConnection** (const **Pointer**< **transport::Transport** > &transport, const **Pointer**< **decaf::util::Properties** > &properties)
Constructor.
- virtual **~ActiveMQConnection** ()
- virtual void **removeSession** (**ActiveMQSession** *session) throw (cms::CMSException)
Removes the session resources for the given session instance.
- virtual void **addProducer** (**ActiveMQProducer** *producer) throw (cms::CMSException)
Adds an active Producer to the Set of known producers.
- virtual void **removeProducer** (const **Pointer**< **commands::ProducerId** > &producerId) throw (cms::CMSException)
Removes an active Producer to the Set of known producers.
- virtual void **addDispatcher** (const **Pointer**< **commands::ConsumerId** > &consumer, **Dispatcher** *dispatcher) throw (cms::CMSException)
Adds a dispatcher for a consumer.
- virtual void **removeDispatcher** (const **Pointer**< **commands::ConsumerId** > &consumer) throw (cms::CMSException)
Removes the dispatcher for a consumer.
- virtual void **sendPullRequest** (const **commands::ConsumerInfo** *consumer, long long timeout) throw (exceptions::ActiveMQException)
If supported sends a message pull request to the service provider asking for the delivery of a new message.

- bool **isClosed** () const
Checks if this connection has been closed.
- bool **isStarted** () const
Check if this connection has been started.
- virtual void **destroyDestination** (const **commands::ActiveMQDestination** *destination) throw (**decaf::lang::exceptions::NullPointerException**, **decaf::lang::exceptions::IllegalStateException**, **decaf::lang::exceptions::UnsupportedOperationException**, **activemq::exceptions::ActiveMQException**)
Requests that the Broker removes the given Destination.
- virtual void **destroyDestination** (const **cms::Destination** *destination) throw (**decaf::lang::exceptions::NullPointerException**, **decaf::lang::exceptions::IllegalStateException**, **decaf::lang::exceptions::UnsupportedOperationException**, **activemq::exceptions::ActiveMQException**)
Requests that the Broker removes the given Destination.
- virtual const **cms::ConnectionMetaData** * **getMetaData** () const throw (**cms::CMSEException**)
Gets the metadata for this connection.
- virtual **cms::Session** * **createSession** () throw (**cms::CMSEException**)
Creates a new Session to work for this Connection.
- virtual **cms::Session** * **createSession** (**cms::Session::AcknowledgeMode** ackMode) throw (**cms::CMSEException**)
Creates a new Session to work for this Connection using the specified acknowledgment mode.
- virtual std::string **getClientID** () const
Get the Client Id for this session.
- virtual void **close** () throw (**cms::CMSEException**)
Closes this connection as well as any Sessions created from it (and those Sessions' consumers and producers).
- virtual void **start** () throw (**cms::CMSEException**)
Starts or (restarts) a connections delivery of incoming messages.
- virtual void **stop** () throw (**cms::CMSEException**)
Stop the flow of incoming messages.
- virtual **cms::ExceptionListener** * **getExceptionListener** () const
Gets the registered Exception Listener for this connection.
- virtual void **setExceptionListener** (**cms::ExceptionListener** *listener)
Sets the registered Exception Listener for this connection.
- void **addTransportListener** (**transport::TransportListener** *transportListener)

Adds a transport listener so that a client can be notified of events in the underlying transport, client's are always notified after the event has been processed by the Connection class.

- **void removeTransportListener (transport::TransportListener *transportListener)**
Removes a registered TransportListener from the Connection's set of Transport listeners, this listener will no longer receive any Transport related events.
- **virtual void onCommand (const Pointer< commands::Command > &command)**
Event handler for the receipt of a non-response command from the transport.
- **virtual void onException (const decaf::lang::Exception &ex)**
Event handler for an exception from a command transport.
- **virtual void transportInterrupted ()**
The transport has suffered an interruption from which it hopes to recover.
- **virtual void transportResumed ()**
The transport has resumed after an interruption.
- **const commands::ConnectionInfo & getConnectionInfo () const throw (exceptions::ActiveMQException)**
Gets the ConnectionInfo for this Object, if the Connection is not open than this method throws an exception.
- **const commands::ConnectionId & getConnectionId () const throw (exceptions::ActiveMQException)**
Gets the ConnectionId for this Object, if the Connection is not open than this method throws an exception.
- **void oneway (Pointer< commands::Command > command) throw (activemq::exceptions::ActiveMQException)**
Sends a oneway message.
- **void syncRequest (Pointer< commands::Command > command, unsigned int timeout=0) throw (activemq::exceptions::ActiveMQException)**
Sends a synchronous request and returns the response from the broker.
- **virtual void fire (const exceptions::ActiveMQException &ex)**
Notify the exception listener.

6.21.1 Detailed Description

Concrete connection used for all connectors to the ActiveMQ broker.

6.21.2 Constructor & Destructor Documentation

- 6.21.2.1 activemq::core::ActiveMQConnection::ActiveMQConnection (const Pointer< transport::Transport > & transport, const Pointer< decaf::util::Properties > & properties)**

Constructor.

Parameters

transport The Transport requested for this connection to the Broker.

properties The Properties that were defined for this connection

6.21.2.2 `virtual activemq::core::ActiveMQConnection::~~ActiveMQConnection ()`
[virtual]

6.21.3 Member Function Documentation

6.21.3.1 `virtual void activemq::core::ActiveMQConnection::addDispatcher (`
`const Pointer< commands::ConsumerId > & consumer, Dispatcher *`
`dispatcher) throw (cms::CMSEException)` [virtual]

Adds a dispatcher for a consumer.

Parameters

consumer - The consumer for which to register a dispatcher.

dispatcher - The dispatcher to handle incoming messages for the consumer.

6.21.3.2 `virtual void activemq::core::ActiveMQConnection::addProducer (`
`ActiveMQProducer * producer) throw (cms::CMSEException)`
[virtual]

Adds an active Producer to the Set of known producers.

Parameters

producer - The Producer to add from the the known set.

6.21.3.3 `void activemq::core::ActiveMQConnection::addTransportListener (`
`transport::TransportListener * transportListener)`

Adds a transport listener so that a client can be notified of events in the underlying transport, client's are always notified after the event has been processed by the Connection class.

Client's should ensure that the registered listener does not block or take a long amount of time to execute in order to not degrade performance of this Connection.

Parameters

transportListener The TransportListener instance to add to this Connection's set of listeners to notify of Transport events.

6.21.3.4 `virtual void activemq::core::ActiveMQConnection::close () throw (`
`cms::CMSEException)` [virtual]

Closes this connection as well as any Sessions created from it (and those Sessions' consumers and producers).

Exceptions*CMSException*

6.21.3.5 `virtual cms::Session* activemq::core::ActiveMQConnection::createSession (cms::Session::AcknowledgeMode ackMode) throw (cms::CMSException)` [virtual]

Creates a new Session to work for this Connection using the specified acknowledgment mode.

Parameters

ackMode the Acknowledgment Mode to use.

Exceptions*CMSException*

6.21.3.6 `virtual cms::Session* activemq::core::ActiveMQConnection::createSession () throw (cms::CMSException)` [virtual]

Creates a new Session to work for this Connection.

Exceptions*CMSException*

6.21.3.7 `virtual void activemq::core::ActiveMQConnection::destroyDestination (const commands::ActiveMQDestination * destination) throw (decaf::lang::exceptions::NullPointerException, decaf::lang::exceptions::IllegalStateException, decaf::lang::exceptions::UnsupportedOperationException, activemq::exceptions::ActiveMQException)` [virtual]

Requests that the Broker removes the given Destination.

Calling this method implies that the client is finished with the Destination and that no other messages will be sent or received for the given Destination. The Broker frees all resources it has associated with this Destination.

Parameters

destination The Destination the Broker will be requested to remove.

Exceptions

NullPointerException If the passed Destination is Null

IllegalStateException If the connection is closed.

UnsupportedOperationException If the wire format in use does not support this operation.

ActiveMQException If any other error occurs during the attempt to destroy the destination.

6.21.3.8 `virtual void activemq::core::ActiveMQConnection::destroyDestination (const cms::Destination * destination) throw (decaf::lang::exceptions::NullPointerException, decaf::lang::exceptions::IllegalStateException, decaf::lang::exceptions::UnsupportedOperationException, activemq::exceptions::ActiveMQException) [virtual]`

Requests that the Broker removes the given Destination.

Calling this method implies that the client is finished with the Destination and that no other messages will be sent or received for the given Destination. The Broker frees all resources it has associated with this Destination.

Parameters

destination The CMS Destination the Broker will be requested to remove.

Exceptions

NullPointerException If the passed Destination is Null

IllegalStateException If the connection is closed.

UnsupportedOperationException If the wire format in use does not support this operation.

ActiveMQException If any other error occurs during the attempt to destroy the destination.

6.21.3.9 `virtual void activemq::core::ActiveMQConnection::fire (const exceptions::ActiveMQException & ex) [virtual]`

Notify the exception listener.

Parameters

ex the exception to fire

6.21.3.10 `virtual std::string activemq::core::ActiveMQConnection::getClientID () const [virtual]`

Get the Client Id for this session.

Returns

string version of Client Id

6.21.3.11 `const commands::ConnectionId& activemq::core::ActiveMQConnection::getConnectionId () const throw (exceptions::ActiveMQException)`

Gets the ConnectionId for this Object, if the Connection is not open than this method throws an exception.

6.21.3.12 `const commands::ConnectionInfo& activemq::core::ActiveMQConnection::getConnectionInfo () const throw (exceptions::ActiveMQException)`

Gets the ConnectionInfo for this Object, if the Connection is not open than this method throws an exception.

6.21.3.13 `virtual cms::ExceptionListener* activemq::core::ActiveMQConnection::getExceptionListener () const [inline, virtual]`

Gets the registered Exception Listener for this connection.

Returns

pointer to an exception listener or NULL

6.21.3.14 `virtual const cms::ConnectionMetaData* activemq::core::ActiveMQConnection::getMetaData () const throw (cms::CMSException) [inline, virtual]`

Gets the metadata for this connection.

Returns

the connection MetaData pointer (caller does not own it).

Exceptions

CMSException if the provider fails to get the connection metadata for this connection.

See also

ConnectionMetaData

Since

2.0

6.21.3.15 `bool activemq::core::ActiveMQConnection::isClosed () const [inline]`

Checks if this connection has been closed.

Returns

true if the connection is closed

6.21.3.16 `bool activemq::core::ActiveMQConnection::isStarted () const [inline]`

Check if this connection has been started.

Returns

true if the start method has been called.

6.21.3.17 virtual void activemq::core::ActiveMQConnection::onCommand (const Pointer< commands::Command > & *command*) [virtual]

Event handler for the receipt of a non-response command from the transport.

Parameters

command the received command object.

Implements **activemq::transport::TransportListener** (p. 3081).

6.21.3.18 void activemq::core::ActiveMQConnection::oneway (Pointer< commands::Command > *command*) throw (activemq::exceptions::ActiveMQException)

Sends a oneway message.

Parameters

command The message to send.

Exceptions

ConnectorException if not currently connected, or if the operation fails for any reason.

6.21.3.19 virtual void activemq::core::ActiveMQConnection::onException (const decaf::lang::Exception & *ex*) [virtual]

Event handler for an exception from a command transport.

Parameters

ex The exception.

Implements **activemq::transport::TransportListener** (p. 3082).

6.21.3.20 virtual void activemq::core::ActiveMQConnection::removeDispatcher (const Pointer< commands::ConsumerId > & *consumer*) throw (cms::CMSException) [virtual]

Removes the dispatcher for a consumer.

Parameters

consumer - The consumer for which to remove the dispatcher.

6.21.3.21 virtual void activemq::core::ActiveMQConnection::removeProducer (const Pointer< commands::ProducerId > & *producerId*) throw (cms::CMSException) [virtual]

Removes an active Producer to the Set of known producers.

Parameters

producerId - The ProducerId to remove from the the known set.

6.21.3.22 `virtual void activemq::core::ActiveMQConnection::removeSession (ActiveMQSession * session) throw (cms::CMSException) [virtual]`

Removes the session resources for the given session instance.

Parameters

session The session to be unregistered from this connection.

6.21.3.23 `void activemq::core::ActiveMQConnection::removeTransportListener (transport::TransportListener * transportListener)`

Removes a registered TransportListener from the Connection's set of Transport listeners, this listener will no longer receive any Transport related events.

The caller is responsible for freeing the listener in all cases.

Parameters

transportListener The pointer to the TransportListener to remove from the set of listeners.

6.21.3.24 `virtual void activemq::core::ActiveMQConnection::sendPullRequest (const commands::ConsumerInfo * consumer, long long timeout) throw (exceptions::ActiveMQException) [virtual]`

If supported sends a message pull request to the service provider asking for the delivery of a new message.

This is used in the case where the service provider has been configured with a zero prefetch or is only capable of delivering messages on a pull basis.

Parameters

consumer - the ConsumerInfo for the requesting Consumer.

timeout - the time that the client is willing to wait.

6.21.3.25 `virtual void activemq::core::ActiveMQConnection::setExceptionListener (cms::ExceptionListener * listener) [inline, virtual]`

Sets the registered Exception Listener for this connection.

Parameters

listener pointer to and ExceptionListener

6.21.3.26 `virtual void activemq::core::ActiveMQConnection::start () throw (cms::CMSException) [virtual]`

Starts or (restarts) a connections delivery of incoming messages.

Exceptions

CMSException

6.21.3.27 `virtual void activemq::core::ActiveMQConnection::stop () throw (cms::CMSException) [virtual]`

Stop the flow of incoming messages.

Exceptions

CMSException

6.21.3.28 `void activemq::core::ActiveMQConnection::syncRequest (Pointer< commands::Command > command, unsigned int timeout = 0) throw (activemq::exceptions::ActiveMQException)`

Sends a synchronous request and returns the response from the broker.

Converts any error responses into an exception.

Parameters

command The request command.

timeout The time to wait for a response, default is zero or infinite.

Exceptions

ConnectorException thrown if an error response was received from the broker, or if any other error occurred.

6.21.3.29 `virtual void activemq::core::ActiveMQConnection::transportInterrupted () [virtual]`

The transport has suffered an interruption from which it hopes to recover.

Implements `activemq::transport::TransportListener` (p. 3082).

6.21.3.30 `virtual void activemq::core::ActiveMQConnection::transportResumed () [virtual]`

The transport has resumed after an interruption.

Implements `activemq::transport::TransportListener` (p. 3082).

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQConnectionFactory.h`

6.22 activemq::core::ActiveMQConnectionFactory Class Reference

```
#include <src/main/activemq/core/ActiveMQConnectionFactory.h>
```

Inheritance diagram for `activemq::core::ActiveMQConnectionFactory`:

Public Member Functions

- **ActiveMQConnectionFactory** (const std::string &url, const std::string &username="", const std::string &password="")
Constructor.
- virtual ~**ActiveMQConnectionFactory** ()
- virtual **cms::Connection** * **createConnection** () throw (cms::CMSException)
Creates a connection with the default user identity.
- virtual **cms::Connection** * **createConnection** (const std::string &username, const std::string &password) throw (cms::CMSException)
Creates a connection with the specified user identity.
- virtual **cms::Connection** * **createConnection** (const std::string &username, const std::string &password, const std::string &clientId) throw (cms::CMSException)
Creates a connection with the specified user identity.
- virtual void **setUsername** (const std::string &username)
Sets the username that should be used when creating a new connection.
- virtual const std::string & **getUsername** () const
Gets the username that this factory will use when creating a new connection instance.
- virtual void **setPassword** (const std::string &password)
Sets the password that should be used when creating a new connection.
- virtual const std::string & **getPassword** () const
Gets the password that this factory will use when creating a new connection instance.
- virtual void **setBrokerURL** (const std::string &brokerURL)
Sets the Broker URL that should be used when creating a new connection instance.
- virtual const std::string & **getBrokerURL** () const
Gets the Broker URL that this factory will use when creating a new connection instance.

Static Public Member Functions

- static **cms::Connection** * **createConnection** (const std::string &url, const std::string &username, const std::string &password, const std::string &clientId="") throw (cms::CMSException)
Creates a connection with the specified user identity.

6.22.1 Constructor & Destructor Documentation

6.22.1.1 `activemq::core::ActiveMQConnectionFactory::ActiveMQConnectionFactory ()`

6.22.1.2 `activemq::core::ActiveMQConnectionFactory::ActiveMQConnectionFactory (const std::string & url, const std::string & username = "", const std::string & password = "")`

Constructor.

Parameters

url the URL of the Broker we are connecting to.

username to authenticate with, defaults to ""

password to authenticate with, defaults to ""

6.22.1.3 `virtual activemq::core::ActiveMQConnectionFactory::~~ActiveMQConnectionFactory () [inline, virtual]`

6.22.2 Member Function Documentation

6.22.2.1 `virtual cms::Connection* activemq::core::ActiveMQConnectionFactory::createConnection () throw (cms::CMSEException) [virtual]`

Creates a connection with the default user identity.

The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called.

Returns

a Connection Pointer

Exceptions

CMSEException

Implements `cms::ConnectionFactory` (p. 1105).

6.22.2.2 `virtual cms::Connection* activemq::core::ActiveMQConnectionFactory::createConnection (const std::string & username, const std::string & password) throw (cms::CMSEException) [virtual]`

Creates a connection with the specified user identity.

The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called. The username and password values passed here do not change the defaults, subsequent calls to the parameterless createConnection will continue to use the default values that were set in the Constructor.

Parameters

username to authenticate with

password to authenticate with

Returns

a Connection Pointer

Exceptions

CMSEException

Implements **cms::ConnectionFactory** (p. 1104).

```
6.22.2.3 static cms::Connection* ac-
tivemq::core::ActiveMQConnectionFactory::createConnection (
    const std::string & url, const std::string & username, const
    std::string & password, const std::string & clientId = "" ) throw (
    cms::CMSEException ) [static]
```

Creates a connection with the specified user identity.

The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called.

Parameters

url the URL of the Broker we are connecting to.

username to authenticate with

password to authenticate with

clientId to assign to connection, defaults to ""

Exceptions

CMSEException.

```
6.22.2.4 virtual cms::Connection* ac-
tivemq::core::ActiveMQConnectionFactory::createConnection ( const
    std::string & username, const std::string & password, const std::string
    & clientId ) throw ( cms::CMSEException ) [virtual]
```

Creates a connection with the specified user identity.

The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called. The username and password values passed here do not change the defaults, subsequent calls to the parameterless createConnection will continue to use the default values that were set in the Constructor.

Parameters

username to authenticate with

password to authenticate with

clientId to assign to connection if "" then a random cleint Id is created for this connection.

Returns

a Connection Pointer

Exceptions

CMSException

Implements **cms::ConnectionFactory** (p. 1105).

6.22.2.5 `virtual const std::string& activemq::core::ActiveMQConnectionFactory::getBrokerURL () const [inline, virtual]`

Gets the Broker URL that this factory will use when creating a new connection instance.

Returns

brokerURL string

6.22.2.6 `virtual const std::string& activemq::core::ActiveMQConnectionFactory::getPassword () const [inline, virtual]`

Gets the password that this factory will use when creating a new connection instance.

Returns

password string, "" for default credentials

6.22.2.7 `virtual const std::string& activemq::core::ActiveMQConnectionFactory::getUsername () const [inline, virtual]`

Gets the username that this factory will use when creating a new connection instance.

Returns

username string, "" for default credentials

6.22.2.8 `virtual void activemq::core::ActiveMQConnectionFactory::setBrokerURL (const std::string & brokerURL) [inline, virtual]`

Sets the Broker URL that should be used when creating a new connection instance.

Parameters

brokerURL string

6.22.2.9 virtual void activemq::core::ActiveMQConnectionFactory::setPassword (const std::string & *password*) [inline, virtual]

Sets the password that should be used when creating a new connection.

Parameters

password string

6.22.2.10 virtual void activemq::core::ActiveMQConnectionFactory::setUsername (const std::string & *username*) [inline, virtual]

Sets the username that should be used when creating a new connection.

Parameters

username string

Gets the CMS provider major version number.
- virtual int **getProviderMinorVersion** () const throw (cms::CMSException)
Gets the CMS provider minor version number.
- virtual std::vector< std::string > **getCMSXPropertyNames** () const throw (cms::CMSException)
Gets an Vector of the CMSX property names.

6.23.1 Detailed Description

This class houses all the various settings and information that is used by an instance of an **ActiveMQConnection** (p. 202) class.

Since

3.0

6.23.2 Constructor & Destructor Documentation

6.23.2.1 **activemq::core::ActiveMQConnectionMetaData::ActiveMQConnectionMetaData** ()

6.23.2.2 **virtual**
activemq::core::ActiveMQConnectionMetaData::~~ActiveMQConnectionMetaData () [virtual]

6.23.3 Member Function Documentation

6.23.3.1 **virtual int** **activemq::core::ActiveMQConnectionMetaData::getCMSMajorVersion** ()
const throw (cms::CMSException) [virtual]

Gets the CMS major version number.

Returns

the CMS API major version number

Exceptions

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements **cms::ConnectionMetaData** (p. 1155).

6.23.3.2 `virtual int activemq::core::ActiveMQConnectionMetaData::getCMSMinorVersion () const throw (cms::CMSEException) [virtual]`

Gets the CMS minor version number.

Returns

the CMS API minor version number

Exceptions

CMSEException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1156).

6.23.3.3 `virtual std::string activemq::core::ActiveMQConnectionMetaData::getCMSProviderName () const throw (cms::CMSEException) [virtual]`

Gets the CMS provider name.

Returns

the CMS provider name

Exceptions

CMSEException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1156).

6.23.3.4 `virtual std::string activemq::core::ActiveMQConnectionMetaData::getCMSVersion () const throw (cms::CMSEException) [virtual]`

Gets the CMS API version.

Returns

the CMS API Version in String form.

Exceptions

CMSEException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1156).

6.23.3.5 `virtual std::vector<std::string> activemq::core::ActiveMQConnectionMetaData::getCMSXPropertyNames () const throw (cms::CMSException) [virtual]`

Gets an Vector of the CMSX property names.

Returns

an Vector of CMSX property names

Exceptions

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1157).

6.23.3.6 `virtual int activemq::core::ActiveMQConnectionMetaData::getProviderMajorVersion () const throw (cms::CMSException) [virtual]`

Gets the CMS provider major version number.

Returns

the CMS provider major version number

Exceptions

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1157).

6.23.3.7 `virtual int activemq::core::ActiveMQConnectionMetaData::getProviderMinorVersion () const throw (cms::CMSException) [virtual]`

Gets the CMS provider minor version number.

Returns

the CMS provider minor version number

Exceptions

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1157).

6.23.3.8 `virtual std::string activemq::core::ActiveMQConnectionMetaData::getProviderVersion () const throw (cms::CMSException) [virtual]`

Gets the CMS provider version.

Returns

the CMS provider version

Exceptions

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1157).

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQConnectionMetaData.h`

6.24 `activemq::core::ActiveMQConnectionSupport` Class Reference

`#include <src/main/activemq/core/ActiveMQConnectionSupport.h>`

Inheritance diagram for `activemq::core::ActiveMQConnectionSupport`:

Public Member Functions

- `ActiveMQConnectionSupport (const Pointer< transport::Transport > &transport, const Pointer< decaf::util::Properties > &properties)`
*Creates an instance of the **ActiveMQConnectionSupport** (p.220) class, the most common properties for a connection are pulled from the properties instance or are set to defaults.*
- `virtual ~ActiveMQConnectionSupport ()`
- `virtual void startupTransport () throw (decaf::lang::Exception)`
Starts the Transport, this should initiate the connection between this client and the Transports endpoint.
- `virtual void shutdownTransport () throw (decaf::lang::Exception)`
Closes this object and deallocates the appropriate resources.
- `const decaf::util::Properties & getProperties () const`
Gets the Properties object that this Config object was initialized with.
- `transport::Transport & getTransport () const`
Gets the Transport Configured for this Connection.

- **bool isAlwaysSyncSend () const**
Gets if the Connection should always send things Synchronously.
- **void setAlwaysSyncSend (bool value)**
Sets if the Connection should always send things Synchronously.
- **bool isUseAsyncSend () const**
Gets if the useAsyncSend option is set.
- **void setUseAsyncSend (bool value)**
Sets the useAsyncSend option.
- **unsigned int getSendTimeout () const**
Gets the assigned send timeout for this Connector.
- **void setSendTimeout (unsigned int timeout)**
Sets the send timeout to use when sending Message objects, this will cause all messages to be sent using a Synchronous request is non-zero.
- **unsigned int getCloseTimeout () const**
Gets the assigned close timeout for this Connector.
- **void setCloseTimeout (unsigned int timeout)**
Sets the close timeout to use when sending the disconnect request.
- **unsigned int getProducerWindowSize () const**
Gets the configured producer window size for Producers that are created from this connector.
- **void setProducerWindowSize (unsigned int windowSize)**
Sets the size in Bytes of messages that a producer can send before it is blocked to await a ProducerAck from the broker that frees enough memory to allow another message to be sent.
- **std::string getUsername () const**
Gets the Configured Username.
- **void setUsername (const std::string &username)**
Sets the Username.
- **std::string getPassword () const**
Gets the Configured Password.
- **void setPassword (const std::string &password)**
Sets the Password.
- **std::string getClientId () const**
Gets the Configured Client Id.
- **void setClientId (const std::string &clientId)**
Sets the Client Id.

- long long **getNextSessionId** ()
Get the Next available Session Id.
- long long **getNextTempDestinationId** ()
Get the Next Temporary Destination Id.
- long long **getNextLocalTransactionId** ()
Get the Next Temporary Destination Id.

6.24.1 Constructor & Destructor Documentation

6.24.1.1 **activemq::core::ActiveMQConnectionSupport::ActiveMQConnectionSupport** (const Pointer< transport::Transport > & *transport*, const Pointer< decaf::util::Properties > & *properties*)

Creates an instance of the **ActiveMQConnectionSupport** (p.220) class, the most common properties for a connection are pulled from the properties instance or are set to defaults.

Parameters

transport The Transport that this Connection will use for sending Commands to the Broker.
properties The URI configured properties for this connection.

6.24.1.2 **virtual** **activemq::core::ActiveMQConnectionSupport::~~ActiveMQConnectionSupport** () [virtual]

6.24.2 Member Function Documentation

6.24.2.1 **std::string activemq::core::ActiveMQConnectionSupport::getClientId** () **const** [inline]

Gets the Configured Client Id.

Returns

the clientId.

6.24.2.2 **unsigned int ac-** **tivemq::core::ActiveMQConnectionSupport::getCloseTimeout** () **const** [inline]

Gets the assigned close timeout for this Connector.

Returns

the close timeout configured in the connection uri

6.24.2.3 `long long activemq::core::ActiveMQConnectionSupport::getNextLocalTransactionId () [inline]`

Get the Next Temporary Destination Id.

Returns

the next id in the sequence.

6.24.2.4 `long long activemq::core::ActiveMQConnectionSupport::getNextSessionId () [inline]`

Get the Next available Session Id.

Returns

the next id in the sequence.

6.24.2.5 `long long activemq::core::ActiveMQConnectionSupport::getNextTempDestinationId () [inline]`

Get the Next Temporary Destination Id.

Returns

the next id in the sequence.

6.24.2.6 `std::string activemq::core::ActiveMQConnectionSupport::getPassword () const [inline]`

Gets the Configured Password.

Returns

the password.

6.24.2.7 `unsigned int activemq::core::ActiveMQConnectionSupport::getProducerWindowSize () const [inline]`

Gets the configured producer window size for Producers that are created from this connector.

This only applies if there is no send timeout and the producer is able to send asynchronously.

Returns

size in bytes of messages that this producer can produce before it must block and wait for ProducerAck messages to free resources.

6.24.2.8 `const decaf::util::Properties& activemq::core::ActiveMQConnectionSupport::getProperties () const [inline]`

Gets the Properties object that this Config object was initialized with.

Returns

a const reference to the Connection Config.

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

6.24.2.9 `unsigned int activemq::core::ActiveMQConnectionSupport::getSendTimeout () const [inline]`

Gets the assigned send timeout for this Connector.

Returns

the send timeout configured in the connection uri

6.24.2.10 `transport::Transport& activemq::core::ActiveMQConnectionSupport::getTransport () const [inline]`

Gets the Transport Configured for this Connection.

Returns

the configured transport

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

6.24.2.11 `std::string activemq::core::ActiveMQConnectionSupport::getUsername () const [inline]`

Gets the Configured Username.

Returns

the username.

6.24.2.12 `bool activemq::core::ActiveMQConnectionSupport::isAlwaysSyncSend () const [inline]`

Gets if the Connection should always send things Synchronously.

Returns

true if sends should always be Synchronous.

6.24.2.13 `bool activemq::core::ActiveMQConnectionSupport::isUseAsyncSend ()`
`const [inline]`

Gets if the useAsyncSend option is set.

Returns

true if on false if not.

6.24.2.14 `void activemq::core::ActiveMQConnectionSupport::setAlwaysSyncSend (`
`bool value) [inline]`

Sets if the Connection should always send things Synchronously.

Parameters

value true if sends should always be Synchronous.

6.24.2.15 `void activemq::core::ActiveMQConnectionSupport::setClientId (const`
`std::string & clientId) [inline]`

Sets the Client Id.

Parameters

clientId - The new clientId value.

6.24.2.16 `void activemq::core::ActiveMQConnectionSupport::setCloseTimeout (`
`unsigned int timeout) [inline]`

Sets the close timeout to use when sending the disconnect request.

Parameters

timeout - The time to wait for a close message.

6.24.2.17 `void activemq::core::ActiveMQConnectionSupport::setPassword (const`
`std::string & password) [inline]`

Sets the Password.

Parameters

password - The new password value.

6.24.2.18 `void activemq::core::ActiveMQConnectionSupport::setProducerWindowSize (unsigned int windowSize) [inline]`

Sets the size in Bytes of messages that a producer can send before it is blocked to await a ProducerAck from the broker that frees enough memory to allow another message to be sent.

Parameters

windowSize - The size in bytes of the Producers memory window.

6.24.2.19 `void activemq::core::ActiveMQConnectionSupport::setSendTimeout (unsigned int timeout) [inline]`

Sets the send timeout to use when sending Message objects, this will cause all messages to be sent using a Synchronous request is non-zero.

Parameters

timeout - The time to wait for a response.

6.24.2.20 `void activemq::core::ActiveMQConnectionSupport::setUseAsyncSend (bool value) [inline]`

Sets the useAsyncSend option.

Parameters

value - true to activate, false to disable.

6.24.2.21 `void activemq::core::ActiveMQConnectionSupport::setUsername (const std::string & username) [inline]`

Sets the Username.

Parameters

username - The new username value.

6.24.2.22 `virtual void activemq::core::ActiveMQConnectionSupport::shutdownTransport () throw (decaf::lang::Exception) [virtual]`

Closes this object and deallocates the appropriate resources.

The object is generally no longer usable after calling close.

Exceptions

Exception

```
6.24.2.23 virtual void ac-
        tivemq::core::ActiveMQConnectionSupport::startupTransport (    )
        throw ( decaf::lang::Exception ) [virtual]
```

Starts the Transport, this should initiate the connection between this client and the Transports endpoint.

Exceptions

Exception

The documentation for this class was generated from the following file:

- src/main/activemq/core/ActiveMQConnectionSupport.h

6.25 activemq::core::ActiveMQConstants Class Reference

Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back and forth between string and enum values.

```
#include <src/main/activemq/core/ActiveMQConstants.h>
```

Data Structures

- class StaticInitializer

Public Types

- enum TransactionState {
TRANSACTION_STATE_BEGIN = 0, TRANSACTION_STATE_PREPARE = 1, TRANSACTION_STATE_COMMITONEPHASE = 2, TRANSACTION_STATE_COMMITTWOPHASE = 3, TRANSACTION_STATE_ROLLBACK = 4, TRANSACTION_STATE_RECOVER = 5, TRANSACTION_STATE_FORGET = 6, TRANSACTION_STATE_END = 7 }
- enum DestinationActions { DESTINATION_ADD_OPERATION = 0, DESTINATION_REMOVE_OPERATION = 1 }
- enum AckType {
ACK_TYPE_DELIVERED = 0, ACK_TYPE_POISON = 1, ACK_TYPE_CONSUMED = 2, ACK_TYPE_REDELIVERED = 3, ACK_TYPE_INDIVIDUAL = 4 }
- enum DestinationOption {
CONSUMER_PREFETCHSIZE, CUNSUMER_MAXPENDINGMSGLIMIT, CONSUMER_NOLOCAL, CONSUMER_DISPATCHASYNC, CONSUMER_RETROACTIVE, CONSUMER_SELECTOR, CONSUMER_EXCLUSIVE, CONSUMER_PRIORITY, NUM_OPTIONS }

These values represent the options that can be appended to an Destination name, i.e.

- enum **URIParam** {
CONNECTION_SENDTIMEOUT, **CONNECTION_PRODUCERWINDOWSIZE**, **CONNECTION_CLOSETIMEOUT**,
CONNECTION_ALWAYSSENDCSEND,
CONNECTION_USEASYNCSSEND, **PARAM_USERNAME**, **PARAM_PASSWORD**, **PARAM_CLIENTID**,
NUM_PARAMS }

These values represent the parameters that can be added to the connection URI that affect the ActiveMQ Core API.

Static Public Member Functions

- static const std::string & **toString** (const **DestinationOption** option)
- static **DestinationOption** **toDestinationOption** (const std::string &option)
- static const std::string & **toString** (const **URIParam** option)
- static **URIParam** **toURIOption** (const std::string &option)

6.25.1 Detailed Description

Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back an forth between string and enum values.

6.25.2 Member Enumeration Documentation

6.25.2.1 enum activemq::core::ActiveMQConstants::AckType

Enumerator:

ACK_TYPE_DELIVERED
ACK_TYPE_POISON
ACK_TYPE_CONSUMED
ACK_TYPE_REDELIVERED
ACK_TYPE_INDIVIDUAL

6.25.2.2 enum activemq::core::ActiveMQConstants::DestinationActions

Enumerator:

DESTINATION_ADD_OPERATION
DESTINATION_REMOVE_OPERATION

6.25.2.3 enum activemq::core::ActiveMQConstants::DestinationOption

These values represent the options that can be appended to an Destination name, i.e.

/topic/foo?consumer.exclusive=true

Enumerator:

```
CONSUMER_PREFECTCHSIZE  
CUNSUMER_MAXPENDINGMSGLIMIT  
CONSUMER_NOLOCAL  
CONSUMER_DISPATCHASYNC  
CONSUMER_RETROACTIVE  
CONSUMER_SELECTOR  
CONSUMER_EXCLUSIVE  
CONSUMER_PRIORITY  
NUM_OPTIONS
```

6.25.2.4 enum activemq::core::ActiveMQConstants::TransactionState

Enumerator:

```
TRANSACTION_STATE_BEGIN  
TRANSACTION_STATE_PREPARE  
TRANSACTION_STATE_COMMITONEPHASE  
TRANSACTION_STATE_COMMITTWOPHASE  
TRANSACTION_STATE_ROLLBACK  
TRANSACTION_STATE_RECOVER  
TRANSACTION_STATE_FORGET  
TRANSACTION_STATE_END
```

6.25.2.5 enum activemq::core::ActiveMQConstants::URIPParam

These values represent the parameters that can be added to the connection URI that affect the ActiveMQ Core API.

Enumerator:

```
CONNECTION_SENDTIMEOUT  
CONNECTION_PRODUCERWINDOWSIZE  
CONNECTION_CLOSETIMEOUT  
CONNECTION_ALWAYSASYNCSEND  
CONNECTION_USEASYNCSEND  
PARAM_USERNAME  
PARAM_PASSWORD  
PARAM_CLIENTID  
NUM_PARAMS
```

6.25.3 Member Function Documentation

- 6.25.3.1 static `DestinationOption` `activemq::core::ActiveMQConstants::toDestinationOption (const std::string & option)` [inline, static]
- 6.25.3.2 static const std::string& `activemq::core::ActiveMQConstants::toString (const DestinationOption option)` [inline, static]
- 6.25.3.3 static const std::string& `activemq::core::ActiveMQConstants::toString (const URIParam option)` [inline, static]
- 6.25.3.4 static `URIParam` `activemq::core::ActiveMQConstants::toURIOption (const std::string & option)` [inline, static]

The documentation for this class was generated from the following file:

6.26 activemq::core::ActiveMQConsumer Class Reference

```
#include <src/main/activemq/core/ActiveMQConsumer.h>
```

Inheritance diagram for `activemq::core::ActiveMQConsumer`:

Public Member Functions

- **ActiveMQConsumer** (const **Pointer**< **commands::ConsumerInfo** > &consumerInfo, **ActiveMQSession** *session, const **Pointer**< **ActiveMQTransactionContext** > &transaction)
Constructor.
- virtual **~ActiveMQConsumer** ()
- virtual void **start** ()
Starts the Consumer if not already started and not closed.
- virtual void **stop** ()
Stops a Consumer, the Consumer will not deliver any messages that are dispatched to it until it is started again.
- virtual void **close** () throw (cms::CMSException)
Closes the Consumer.
- virtual **cms::Message** * **receive** () throw (cms::CMSException)
Synchronously Receive a Message.
- virtual **cms::Message** * **receive** (int millisecs) throw (cms::CMSException)
Synchronously Receive a Message, time out after defined interval.

- virtual **cms::Message** * **receiveNoWait** () throw (cms::CMSEException)
Receive a Message, does not wait if there isn't a new message to read, returns NULL if nothing read.
- virtual void **setMessageListener** (cms::MessageListener *listener) throw (cms::CMSEException)
Sets the MessageListener that this class will send notifs on.
- virtual **cms::MessageListener** * **getMessageListener** () const throw (cms::CMSEException)
Gets the MessageListener that this class will send events to.
- virtual std::string **getMessageSelector** () const throw (cms::CMSEException)
Gets this message consumer's message selector expression.
- virtual void **acknowledge** (const Pointer< commands::MessageDispatch > &dispatch) throw (cms::CMSEException)
Method called to acknowledge the message passed, called from a message when the mode is client ack.
- virtual void **dispatch** (const Pointer< MessageDispatch > &message)
Called asynchronously by the session to dispatch a message.
- void **acknowledge** () throw (cms::CMSEException)
Method called to acknowledge all messages that have been received so far.
- void **commit** () throw (exceptions::ActiveMQException)
Called to Commit the current set of messages in this Transaction.
- void **rollback** () throw (exceptions::ActiveMQException)
Called to Roll back the current set of messages in this Transaction.
- void **doClose** () throw (exceptions::ActiveMQException)
Performs the actual close operation on this consumer.
- const **commands::ConsumerInfo** & **getConsumerInfo** () const
Get the Consumer information for this consumer.
- const **commands::ConsumerId** & **getConsumerId** () const
Get the Consumer Id for this consumer.
- bool **isClosed** () const
- bool **isSynchronizationRegistered** () const
*Has this Consumer Transaction **Synchronization** (p. 2945) been added to the transaction.*
- void **setSynchronizationRegistered** (bool value)
*Sets the **Synchronization** (p. 2945) Registered state of this consumer.*
- bool **iterate** ()

Deliver any pending messages to the registered MessageListener if there is one, return true if not all dispatched, or false if no listener or all pending messages have been dispatched.

- void **deliverAcks** () throw (exceptions::ActiveMQException)

Forces this consumer to send all pending acks to the broker.

- void **clearMessagesInProgress** ()

Called on a Failover to clear any pending messages.

- long long **getLastDeliveredSequenceId** () const

Gets the currently set Last Delivered Sequence Id.

- void **setLastDeliveredSequenceId** (long long value)

Sets the value of the Last Delivered Sequence Id.

Protected Member Functions

- **Pointer< MessageDispatch > dequeue** (long long timeout) throw (cms::CMSException)

Used by synchronous receive methods to wait for messages to come in.

- void **beforeMessageIsConsumed** (const **Pointer< commands::MessageDispatch >** &dispatch)

Pre-consume processing.

- void **afterMessageIsConsumed** (const **Pointer< commands::MessageDispatch >** &dispatch, bool messageExpired)

Post-consume processing.

6.26.1 Constructor & Destructor Documentation

- 6.26.1.1** **activemq::core::ActiveMQConsumer::ActiveMQConsumer** (const **Pointer< commands::ConsumerInfo >** & *consumerInfo*, **ActiveMQSession** * *session*, const **Pointer< ActiveMQTransactionContext >** & *transaction*)

Constructor.

- 6.26.1.2** **virtual activemq::core::ActiveMQConsumer::~~ActiveMQConsumer** ()
[virtual]

6.26.2 Member Function Documentation

- 6.26.2.1** **virtual void activemq::core::ActiveMQConsumer::acknowledge** (const **Pointer< commands::MessageDispatch >** & *dispatch*) throw (**cms::CMSException**) [virtual]

Method called to acknowledge the message passed, called from a message when the mode is client ack.

Parameters

message the Message to Acknowledge

Exceptions

CMSEException

6.26.2.2 void activemq::core::ActiveMQConsumer::acknowledge () throw (cms::CMSEException)

Method called to acknowledge all messages that have been received so far.

Exceptions

CMSEException

6.26.2.3 void activemq::core::ActiveMQConsumer::afterMessageIsConsumed (const Pointer< commands::MessageDispatch > & *dispatch*, bool *messageExpired*) [protected]

Post-consume processing.

Parameters

dispatch - the consumed message

messageExpired - flag indicating if the message has expired.

6.26.2.4 void activemq::core::ActiveMQConsumer::beforeMessageIsConsumed (const Pointer< commands::MessageDispatch > & *dispatch*) [protected]

Pre-consume processing.

Parameters

dispatch - the message being consumed.

6.26.2.5 void activemq::core::ActiveMQConsumer::clearMessagesInProgress ()

Called on a Failover to clear any pending messages.

6.26.2.6 virtual void activemq::core::ActiveMQConsumer::close () throw (cms::CMSEException) [virtual]

Closes the Consumer.

This will return all allocated resources and purge any outstanding messages. This method will block if there is a call to receive in progress, or a dispatch to a MessageListener in place

Exceptions

CMSEException

6.26.2.7 `void activemq::core::ActiveMQConsumer::commit () throw (exceptions::ActiveMQException)`

Called to Commit the current set of messages in this Transaction.

Exceptions

ActiveMQException

6.26.2.8 `void activemq::core::ActiveMQConsumer::deliverAcks () throw (exceptions::ActiveMQException)`

Forces this consumer to send all pending acks to the broker.

6.26.2.9 `Pointer<MessageDispatch> activemq::core::ActiveMQConsumer::dequeue (long long timeout) throw (cms::CMSException)` [protected]

Used by synchronous receive methods to wait for messages to come in.

Parameters

timeout - The maximum number of milliseconds to wait before returning. If -1, it will block until a messages is received or this consumer is closed. If 0, will not block at all. If > 0, will wait at a maximum the specified number of milliseconds before returning.

Returns

the message, if received within the allotted time. Otherwise NULL.

Exceptions

InvalidStateException if this consumer is closed upon entering this method.

6.26.2.10 `virtual void activemq::core::ActiveMQConsumer::dispatch (const Pointer< MessageDispatch > & message)` [virtual]

Called asynchronously by the session to dispatch a message.

Parameters

message dispatch object pointer

Implements `activemq::core::Dispatcher` (p. 1441).

6.26.2.11 `void activemq::core::ActiveMQConsumer::doClose () throw (exceptions::ActiveMQException)`

Performs the actual close operation on this consumer.

Exceptions

ActiveMQException

6.26.2.12 `const commands::ConsumerId& activemq::core::ActiveMQConsumer::getConsumerId ()
const [inline]`

Get the Consumer Id for this consumer.

Returns

Reference to a Consumer Id Object

6.26.2.13 `const commands::ConsumerInfo& activemq::core::ActiveMQConsumer::getConsumerInfo ()
const [inline]`

Get the Consumer information for this consumer.

Returns

Reference to a Consumer Info Object

6.26.2.14 `long long activemq::core::ActiveMQConsumer::getLastDeliveredSequenceId ()
const [inline]`

Gets the currently set Last Delivered Sequence Id.

Returns

long long containing the sequence id of the last delivered Message.

6.26.2.15 `virtual cms::MessageListener* activemq::core::ActiveMQConsumer::getMessageListener ()
const throw (cms::CMSEException) [inline, virtual]`

Gets the MessageListener that this class will send events to.

Returns

the currently registered MessageListener interface pointer.

6.26.2.16 `virtual std::string activemq::core::ActiveMQConsumer::getMessageSelector ()
const throw (cms::CMSEException) [virtual]`

Gets this message consumer's message selector expression.

Returns

This Consumer's selector expression or "".

Exceptions

cms::CMSEException (p. 960)

6.26.2.17 `bool activemq::core::ActiveMQConsumer::isClosed () const [inline]`**Returns**

if this Consumer has been closed.

6.26.2.18 `bool activemq::core::ActiveMQConsumer::isSynchronizationRegistered () const [inline]`

Has this Consumer Transaction **Synchronization** (p. 2945) been added to the transaction.

Returns

true if the synchronization has been added.

6.26.2.19 `bool activemq::core::ActiveMQConsumer::iterate ()`

Deliver any pending messages to the registered MessageListener if there is one, return true if not all dispatched, or false if no listener or all pending messages have been dispatched.

6.26.2.20 `virtual cms::Message* activemq::core::ActiveMQConsumer::receive () throw (cms::CMSException) [virtual]`

Synchronously Receive a Message.

Returns

new message

Exceptions

CMSException

6.26.2.21 `virtual cms::Message* activemq::core::ActiveMQConsumer::receive (int milliseconds) throw (cms::CMSException) [virtual]`

Synchronously Receive a Message, time out after defined interval.

Returns null if nothing read.

Parameters

milliseconds the time in milliseconds to wait before returning

Returns

new message or null on timeout

Exceptions

CMSException

6.26.2.22 `virtual cms::Message* activemq::core::ActiveMQConsumer::receiveNoWait () throw (cms::CMSException) [virtual]`

Receive a Message, does not wait if there isn't a new message to read, returns NULL if nothing read.

Returns

new message

Exceptions

CMSException

6.26.2.23 `void activemq::core::ActiveMQConsumer::rollback () throw (exceptions::ActiveMQException)`

Called to Roll back the current set of messages in this Transaction.

Exceptions

ActiveMQException

6.26.2.24 `void activemq::core::ActiveMQConsumer::setLastDeliveredSequenceId (long long value) [inline]`

Sets the value of the Last Delivered Sequence Id.

Parameters

value The new value to assign to the Last Delivered Sequence Id property.

6.26.2.25 `virtual void activemq::core::ActiveMQConsumer::setMessageListener (cms::MessageListener * listener) throw (cms::CMSException) [virtual]`

Sets the MessageListener that this class will send notifs on.

Parameters

listener MessageListener interface pointer

6.26.2.26 `void activemq::core::ActiveMQConsumer::setSynchronizationRegistered (bool value) [inline]`

Sets the **Synchronization** (p. 2945) Registered state of this consumer.

Parameters

value - true if registered false otherwise.

6.26.2.27 virtual void activemq::core::ActiveMQConsumer::start () [virtual]

Starts the Consumer if not already started and not closed.

A consumer will no deliver messages until started.

6.26.2.28 virtual void activemq::core::ActiveMQConsumer::stop () [virtual]

Stops a Consumer, the Consumer will not deliver any messages that are dispatched to it until it is started again.

A Closed Consumer is also a stopped consumer.

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQConsumer.h`

6.27 activemq::library::ActiveMQCPP Class Reference

```
#include <src/main/activemq/library/ActiveMQCPP.h>
```

Public Member Functions

- virtual `~ActiveMQCPP ()`

Static Public Member Functions

- static void `initializeLibrary ()`

Initialize the ActiveMQ-CPP Library constructs, this method will init all the internal Registry objects and initialize the Decaf library.

- static void `initializeLibrary (int argc, char **argv)`

Initialize the ActiveMQ-CPP Library constructs, this method will initialize all the internal Registry objects and initialize the Decaf library.

- static void `shutdownLibrary ()`

Shutdown the ActiveMQ-CPP Library, freeing any resources that could not be freed up to this point.

Protected Member Functions

- `ActiveMQCPP ()`
- `ActiveMQCPP (const ActiveMQCPP &)`
- `ActiveMQCPP & operator= (const ActiveMQCPP &)`

6.27.1 Constructor & Destructor Documentation

6.27.1.1 `activemq::library::ActiveMQCPP::ActiveMQCPP ()` [inline, protected]

6.27.1.2 `activemq::library::ActiveMQCPP::ActiveMQCPP (const ActiveMQCPP &)` [protected]

6.27.1.3 `virtual activemq::library::ActiveMQCPP::~~ActiveMQCPP ()` [inline, virtual]

6.27.2 Member Function Documentation

6.27.2.1 `static void activemq::library::ActiveMQCPP::initializeLibrary ()` [static]

Initialize the ActiveMQ-CPP Library constructs, this method will init all the internal Registry objects and initialize the Decaf library.

Exceptions

runtime_error if an error occurs while initializing this library.

6.27.2.2 `static void activemq::library::ActiveMQCPP::initializeLibrary (int argc, char ** argv)` [static]

Initialize the ActiveMQ-CPP Library constructs, this method will initialize all the internal Registry objects and initialize the Decaf library.

This method takes the args passed to the main method of process for use is setting system properties and configuring the ActiveMQ-CPP Library.

Parameters

argc - the count of arguments passed to this Process.

argv - the array of string arguments passed to this process.

Exceptions

runtime_error if an error occurs while initializing this library.

6.27.2.3 `ActiveMQCPP& activemq::library::ActiveMQCPP::operator= (const ActiveMQCPP &)` [protected]

6.27.2.4 `static void activemq::library::ActiveMQCPP::shutdownLibrary ()` [static]

Shutdown the ActiveMQ-CPP Library, freeing any resources that could not be freed up to this point.

All the user created ActiveMQ-CPP objects and Decaf Library objects should have been destroyed by the time this method is called.

The documentation for this class was generated from the following file:

- `src/main/activemq/library/ActiveMQCPP.h`

6.28 `activemq::commands::ActiveMQDestination` Class Reference

```
#include <src/main/activemq/commands/ActiveMQDestination.h>
```

Inheritance diagram for `activemq::commands::ActiveMQDestination`:

Data Structures

- struct `DestinationFilter`

Public Member Functions

- `ActiveMQDestination ()`
- `ActiveMQDestination (const std::string &physicalName)`
- virtual `~ActiveMQDestination ()`
- virtual `ActiveMQDestination * cloneDataStructure () const`
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void `copyDataStructure (const DataStructure *src)`
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual bool `equals (const DataStructure *value) const`
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual unsigned char `getDataStructureType () const`
*Get the **DataStructure** (p. 1372) Type as defined in *CommandTypes.h*.*
- virtual std::string `toString () const`
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual const std::string & `getPhysicalName () const`
Fetch this destination's physical name.
- virtual std::string & `getPhysicalName ()`
- virtual void `setPhysicalName (const std::string &physicalName)`
Set this destination's physical name.
- virtual bool `isAdvisory () const`
- virtual void `setAdvisory (bool advisory)`
- virtual bool `isConsumerAdvisory () const`
- virtual bool `isProducerAdvisory () const`
- virtual bool `isConnectionAdvisory () const`

- virtual bool **isExclusive** () const
- virtual void **setExclusive** (bool **exclusive**)
- virtual bool **isOrdered** () const
- virtual void **setOrdered** (bool **ordered**)
- virtual std::string **getOrderedTarget** () const
- virtual void **setOrderedTarget** (const std::string &**orderedTarget**)
- virtual **cms::Destination::DestinationType** **getDestinationType** () const =0
Returns the Type of Destination that this object represents.
- virtual bool **isTemporary** () const
Returns true if a temporary Destination.
- virtual bool **isTopic** () const
Returns true if a Topic Destination.
- virtual bool **isQueue** () const
Returns true if a Queue Destination.
- virtual bool **isComposite** () const
Returns true if this destination represents a collection of destinations; allowing a set of destinations to be published to or subscribed from in one CMS operation.
- virtual bool **isWildcard** () const
- const **activemq::util::ActiveMQProperties** & **getOptions** () const
- virtual const **cms::Destination** * **getCMSDestination** () const

Static Public Member Functions

- static std::string **createTemporaryName** (const std::string &clientId)
Create a temporary name from the clientId.
- static std::string **getClientId** (const **ActiveMQDestination** *destination)
From a temporary destination find the clientId of the Connection that created it.
- static **Pointer< ActiveMQDestination >** **createDestination** (int type, const std::string &name)
Creates a Destination given the String Name to use and a Type.

Static Public Attributes

- static const unsigned char **ID _ACTIVEMQDESTINATION** = 0

Protected Attributes

- bool **exclusive**
- bool **ordered**
- bool **advisory**
- std::string **orderedTarget**
- std::string **physicalName**
- **util::ActiveMQProperties** **options**

Static Protected Attributes

- static const std::string **ADVISORY_PREFIX**
prefix for Advisory message destinations
- static const std::string **CONSUMER_ADVISORY_PREFIX**
prefix for consumer advisory destinations
- static const std::string **PRODUCER_ADVISORY_PREFIX**
prefix for producer advisory destinations
- static const std::string **CONNECTION_ADVISORY_PREFIX**
prefix for connection advisory destinations
- static const std::string **DEFAULT_ORDERED_TARGET**
The default target for ordered destinations.
- static const std::string **TEMP_PREFIX**
- static const std::string **TEMP_POSTFIX**
- static const std::string **COMPOSITE_SEPARATOR**
- static const std::string **QUEUE_QUALIFIED_PREFIX**

- static const std::string **TEMP_TOPIC_QUALIFIED_PREFIX**

6.28.1 Constructor & Destructor Documentation

6.28.1.1 `activemq::commands::ActiveMQDestination::ActiveMQDestination ()`

6.28.1.2 `activemq::commands::ActiveMQDestination::ActiveMQDestination (const std::string & physicalName)`

6.28.1.3 `virtual
activemq::commands::ActiveMQDestination::~~ActiveMQDestination ()
[inline, virtual]`

6.28.2 Member Function Documentation

6.28.2.1 `virtual ActiveMQDestination* ac-
tivemq::commands::ActiveMQDestination::cloneDataStructure () const
[inline, virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Implements `activemq::commands::DataStructure` (p. 1373).

6.28.2.2 `virtual void activemq::commands::ActiveMQDestination::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Implements **activemq::commands::DataStructure** (p. 1374).

Referenced by **activemq::commands::ActiveMQTempDestination::copyDataStructure()**.

6.28.2.3 `static Pointer<ActiveMQDestination> activemq::commands::ActiveMQDestination::createDestination (int type, const std::string & name) [static]`

Creates a Destination given the String Name to use and a Type.

Parameters

type - The Type of Destination to Create

name - The Name to use in the creation of the Destination

Returns

Pointer to a new **ActiveMQDestination** (p. 240) instance.

6.28.2.4 `static std::string activemq::commands::ActiveMQDestination::createTemporaryName (const std::string & clientId) [inline, static]`

Create a temporary name from the clientId.

Parameters

clientId

Returns

6.28.2.5 `virtual bool activemq::commands::ActiveMQDestination::equals (const DataStructure * value) const [virtual]`

Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Implements **activemq::commands::DataStructure** (p. 1374).

Referenced by **activemq::commands::ActiveMQTopic::equals()**, and **activemq::commands::ActiveMQTempDestination::equals()**.

6.28.2.6 `static std::string activemq::commands::ActiveMQDestination::getClientId (const ActiveMQDestination * destination) [static]`

From a temporary destination find the clientId of the Connection that created it.

Parameters

destination

Returns

the clientId or null if not a temporary destination

6.28.2.7 `virtual const cms::Destination* activemq::commands::ActiveMQDestination::getCMSDestination () const [inline, virtual]`

Returns

the **cms::Destination** (p. 1387) interface pointer that the objects that derive from this class implement.

6.28.2.8 `virtual unsigned char activemq::commands::ActiveMQDestination::getDataStructureType () const [virtual]`

Get the **DataStructure** (p. 1372) Type as defined in CommandTypes.h.

Returns

The type of the data structure

Implements **activemq::commands::DataStructure** (p. 1375).

6.28.2.9 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQDestination::getDestinationType () const [pure virtual]`

Returns the Type of Destination that this object represents.

Returns

int type qualifier.

6.28.2.10 `const activemq::util::ActiveMQProperties& activemq::commands::ActiveMQDestination::getOptions () const`
[inline]

Returns

a reference (const) to the options properties for this Destination.

6.28.2.11 `virtual std::string activemq::commands::ActiveMQDestination::getOrderedTarget () const`
[inline, virtual]

Returns

Returns the orderedTarget.

6.28.2.12 `virtual const std::string& activemq::commands::ActiveMQDestination::getPhysicalName () const`
[inline, virtual]

Fetch this destination's physical name.

Returns

const string containing the name

6.28.2.13 `virtual std::string& activemq::commands::ActiveMQDestination::getPhysicalName ()`
[inline, virtual]

6.28.2.14 `virtual bool activemq::commands::ActiveMQDestination::isAdvisory () const` [inline, virtual]

Returns

Returns the advisory.

6.28.2.15 `virtual bool activemq::commands::ActiveMQDestination::isComposite () const` [inline, virtual]

Returns true if this destination represents a collection of destinations; allowing a set of destinations to be published to or subscribed from in one CMS operation.

Returns

true if this destination represents a collection of child destinations.

6.28.2.16 `virtual bool activemq::commands::ActiveMQDestination::isConnectionAdvisory ()`
`const [inline, virtual]`

Returns

true if this is a destination for Connection advisories

6.28.2.17 `virtual bool activemq::commands::ActiveMQDestination::isConsumerAdvisory ()`
`const [inline, virtual]`

Returns

true if this is a destination for Consumer advisories

6.28.2.18 `virtual bool activemq::commands::ActiveMQDestination::isExclusive ()`
`const [inline, virtual]`

Returns

Returns the exclusive.

6.28.2.19 `virtual bool activemq::commands::ActiveMQDestination::isOrdered ()`
`const [inline, virtual]`

Returns

Returns the ordered.

6.28.2.20 `virtual bool activemq::commands::ActiveMQDestination::isProducerAdvisory ()`
`const [inline, virtual]`

Returns

true if this is a destination for Producer advisories

6.28.2.21 `virtual bool activemq::commands::ActiveMQDestination::isQueue ()`
`const [inline, virtual]`

Returns true if a Queue Destination.

Returns

true/false

6.28.2.22 `virtual bool activemq::commands::ActiveMQDestination::isTemporary () const [inline, virtual]`

Returns true if a temporary Destination.

Returns

true/false

References cms::Destination::TEMPORARY_TOPIC.

6.28.2.23 `virtual bool activemq::commands::ActiveMQDestination::isTopic () const [inline, virtual]`

Returns true if a Topic Destination.

Returns

true/false

References cms::Destination::TOPIC.

6.28.2.24 `virtual bool activemq::commands::ActiveMQDestination::isWildcard () const [inline, virtual]`

Returns

true if the destination matches multiple possible destinations

6.28.2.25 `virtual void activemq::commands::ActiveMQDestination::setAdvisory (bool advisory) [inline, virtual]`

Parameters

advisory The advisory to set.

6.28.2.26 `virtual void activemq::commands::ActiveMQDestination::setExclusive (bool exclusive) [inline, virtual]`

Parameters

exclusive The exclusive to set.

6.28.2.27 `virtual void activemq::commands::ActiveMQDestination::setOrdered (bool ordered) [inline, virtual]`

Parameters

ordered The ordered to set.

6.28.2.28 `virtual void activemq::commands::ActiveMQDestination::setOrderedTarget (const std::string & orderedTarget)` [inline, virtual]

Parameters

orderedTarget The orderedTarget to set.

6.28.2.29 `virtual void activemq::commands::ActiveMQDestination::setPhysicalName (const std::string & physicalName)` [virtual]

Set this destination's physical name.

Returns

const string containing the name

6.28.2.30 `virtual std::string activemq::commands::ActiveMQDestination::toString () const` [virtual]

Returns a string containing the information for this **DataStructure** (p.1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from `activemq::commands::BaseDataStructure` (p.662).

6.28.3 Field Documentation

6.28.3.1 `bool activemq::commands::ActiveMQDestination::advisory` [protected]

6.28.3.2 `const std::string activemq::commands::ActiveMQDestination::ADVISORY_PREFIX` [static, protected]

prefix for Advisory message destinations

6.28.3.3 `const std::string activemq::commands::ActiveMQDestination::COMPOSITE_SEPARATOR` [static, protected]

6.28.3.4 `const std::string activemq::commands::ActiveMQDestination::CONNECTION_ADVISORY_PREFIX` [static, protected]

prefix for connection advisory destinations

6.28.3.5 `const std::string`
`activemq::commands::ActiveMQDestination::CONSUMER_`
`ADVISORY_PREFIX` [static, protected]

prefix for consumer advisory destinations

6.28.3.6 `const std::string`
`activemq::commands::ActiveMQDestination::DEFAULT_`
`ORDERED_TARGET` [static, protected]

The default target for ordered destinations.

6.28.3.7 `bool activemq::commands::ActiveMQDestination::exclusive` [protected]

6.29 `activemq::wireformat::openwire::marshal::v3::ActiveMQDestination` Class Reference

Marshaling code for Open Wire Format for `ActiveMQDestinationMarshaller` (p. 250).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQDestinationMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller`:

Public Member Functions

- `ActiveMQDestinationMarshaller ()`
- `virtual ~ActiveMQDestinationMarshaller ()`
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Write a object instance to data output stream.

- virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.29.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQDestinationMarshaller** (p. 250).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.29.2 Constructor & Destructor Documentation

6.29.2.1 activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::ActiveMQDestinationMarshaller () [inline]

6.29.2.2 virtual activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::~~ActiveMQDestinationMarshaller () [inline, virtual]

6.29.3 Member Function Documentation

6.29.3.1 virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::looseMarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1342).

Reimplemented in **activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller** (p. 384), **activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller**

(p. 460), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 483), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 507), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 555).

6.29.3.2 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller` (p. 385), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 460), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 483), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 507), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 555).

6.29.3.3 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1354).

Reimplemented in **activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller** (p. 385), **activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller** (p. 461), **activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller** (p. 483), **activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller** (p. 507), and **activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller** (p. 556).

6.29.3.4 virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::tightMarshal2
(OpenWireFormat * *wireFormat*, commands::DataStructure
*** *dataStructure*, decaf::io::DataOutputStream * *dataOut*,**
utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1360).

Reimplemented in **activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller** (p. 385), **activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller** (p. 461), **activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller** (p. 484), **activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller** (p. 508), and **activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller** (p. 556).

6.29.3.5 virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::tightUnmarshal
(OpenWireFormat * *wireFormat*, commands::DataStructure
*** *dataStructure*, decaf::io::DataInputStream * *dataIn*,**
utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller` (p. 386), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 462), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 484), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 508), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 557).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQDestinationMarshaller.h`

6.30 `activemq::wireformat::openwire::marshal::v1::ActiveMQDestination` Class Reference

Marshaling code for Open Wire Format for `ActiveMQDestinationMarshaller` (p. 254).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQDestinationMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller`:

Public Member Functions

- `ActiveMQDestinationMarshaller ()`
- `virtual ~ActiveMQDestinationMarshaller ()`
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Un-marshal an object instance from the data input stream.

- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Write the booleans that this object uses to a BooleanStream.

Un-marshal an object instance from the data input stream.

- virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.30.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQDestinationMarshaller** (p. 254).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.30.2 Constructor & Destructor Documentation

6.30.2.1 activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::ActiveMQDestinationMarshaller () [inline]

6.30.2.2 virtual activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::~~ActiveMQDestinationMarshaller () [inline, virtual]

6.30.3 Member Function Documentation

6.30.3.1 virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::looseMarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1342).

Reimplemented in **activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller** (p. 388), **activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller** (p. 463), **activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller** (p. 487), **activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller** (p. 511), and **activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller** (p. 559).

```

6.30.3.2 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::looseUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn ) throw (
decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 389), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 464), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 487), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 511), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 559).

```

6.30.3.3 virtual int ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::tightMarshall
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
) [virtual]

```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 389), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 464), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 487), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 511), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 560).

6.30.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 389), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 465), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 488), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 512), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 560).

6.30.3.5 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 390), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 465), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 488), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller`

(p. 512), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 560).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQDestinationMarshaller.h`

6.31 `activemq::wireformat::openwire::marshal::v4::ActiveMQDestination` Class Reference

Marshaling code for Open Wire Format for `ActiveMQDestinationMarshaller` (p. 258).

```
#include <src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQDestinationMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller`:

Public Member Functions

- `ActiveMQDestinationMarshaller ()`
- `virtual ~ActiveMQDestinationMarshaller ()`
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Un-marshal an object instance from the data input stream.

- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Write the booleans that this object uses to a BooleanStream.

- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Write a object instance to data output stream.

- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`

Un-marshal an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.31.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQDestinationMarshaller** (p. 258).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.31.2 Constructor & Destructor Documentation

6.31.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::ActiveMQDestinationMarshaller()` [inline]

6.31.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::~~ActiveMQDestinationMarshaller()` [inline, virtual]

6.31.3 Member Function Documentation

6.31.3.1 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut)` throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryWriter that provides that data sink

Exceptions

- IOException* if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 392), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 467), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 491), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 515), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 563).

6.31.3.2 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn)` throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 393), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 468), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 491), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 515), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 563).

```
6.31.3.3 virtual int ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::tightMarshal1
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 393), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 468), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 491), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 515), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 563).

```
6.31.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 393), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 469), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 492), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 516), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 564).

6.31.3.5 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 394), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 469), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 492), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 516), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 564).

          tivemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::tightMarshal1
          ( OpenWireFormat * wireFormat, commands::DataStructure *
            dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
          ) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller` (p. 397), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 472), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 495), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 519), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller` (p. 567).

```
6.32.3.4 virtual void ac-
          tivemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::tightMarshal2
          ( OpenWireFormat * wireFormat, commands::DataStructure
            * dataStructure, decaf::io::DataOutputStream * dataOut,
            utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1360).

Reimplemented in **activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller** (p. 397), **activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller** (p. 472), **activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller** (p. 496), **activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller** (p. 520), and **activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller** (p. 568).

6.32.3.5 virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1366).

Reimplemented in **activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller** (p. 398), **activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller** (p. 473), **activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller** (p. 496), **activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller** (p. 520), and **activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller** (p. 568).

6.33.2 Constructor & Destructor Documentation

6.33.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::ActiveMQDestinationMarshaller () [inline]`

6.33.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::~~ActiveMQDestinationMarshaller () [inline, virtual]`

6.33.3 Member Function Documentation

6.33.3.1 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::marshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 400), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 474), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 499), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 523), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 571).

6.33.3.2 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::unmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataIn* - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 401), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 475), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 499), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 523), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 571).

```
6.33.3.3 virtual int ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 401), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 475), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 499), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 523), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 571).

```
6.33.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 401), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 476), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 500), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 524), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 572).

```
6.33.3.5 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 402), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 476), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 500), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 524), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 572).

The documentation for this class was generated from the following file:

6.34 activemq::exceptions::ActiveMQException Class Reference

```
#include <src/main/activemq/exceptions/ActiveMQException.h>
```

Inheritance diagram for `activemq::exceptions::ActiveMQException`:

Public Member Functions

- **ActiveMQException** () throw ()
Default Constructor.
- **ActiveMQException** (const **ActiveMQException** &ex) throw ()
Copy Constructor.
- **ActiveMQException** (const **decaf::lang::Exception** &ex) throw ()
Copy Constructor.
- **ActiveMQException** (const char *file, const int lineNumber, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- virtual ~**ActiveMQException** () throw ()
- virtual **ActiveMQException** * **clone** () const
Clones this exception.
- virtual **cms::CMSEException** **convertToCMSEException** () const
Converts this exception to a new CMSEException.

6.34.1 Constructor & Destructor Documentation

6.34.1.1 **activemq::exceptions::ActiveMQException::ActiveMQException** () throw ()

Default Constructor.

6.34.1.2 **activemq::exceptions::ActiveMQException::ActiveMQException** (const **ActiveMQException** & *ex*) throw ()

Copy Constructor.

Parameters

ex The Exception whose internal data is copied into this instance.

6.34.1.3 **activemq::exceptions::ActiveMQException::ActiveMQException** (const **decaf::lang::Exception** & *ex*) throw ()

Copy Constructor.

Parameters

ex The Exception whose internal data is copied into this instance.

6.34.1.4 `activemq::exceptions::ActiveMQException::ActiveMQException (const char * file, const int lineNumber, const char * msg, ...) throw ()`

Constructor - Initializes the file name and line number where this message occurred.

Sets the message to report, using an optional list of arguments to parse into the message.

Parameters

file The file name where exception occurs.

lineNumber The line number where the exception occurred.

msg The message to report.

... The list of primitives that are formatted into the message.

6.34.1.5 `virtual activemq::exceptions::ActiveMQException::~~ActiveMQException () throw () [virtual]`

6.34.2 Member Function Documentation

6.34.2.1 `virtual ActiveMQException* activemq::exceptions::ActiveMQException::clone () const [virtual]`

Clones this exception.

This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Returns

Copy of this Exception object

Reimplemented from `decaf::lang::Exception` (p. 1479).

Reimplemented in `activemq::exceptions::BrokerException` (p. 691).

6.34.2.2 `virtual cms::CMSException activemq::exceptions::ActiveMQException::convertToCMSException () const [virtual]`

Converts this exception to a new CMSException.

Returns

a CMSException with the data from this exception

The documentation for this class was generated from the following file:

- `src/main/activemq/exceptions/ActiveMQException.h`

6.35 activemq::commands::ActiveMQMapMessage Class Reference

```
#include <src/main/activemq/commands/ActiveMQMapMessage.h>
```

Inheritance diagram for activemq::commands::ActiveMQMapMessage:

Public Member Functions

- **ActiveMQMapMessage** ()
- virtual **~ActiveMQMapMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual bool **isMarshalAware** () const
Determine if this object is aware of marshaling and should have its before and after marshaling methods called.
- virtual **ActiveMQMapMessage** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual void **beforeMarshal** (**wireformat::WireFormat** *wireFormat) throw (decaf::io::IOException)
Perform any processing needed before an marshal.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual void **clearBody** () throw (cms::CMSEException)
Clears out the body of the message.
- virtual **cms::MapMessage** * **clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual std::vector< std::string > **getMapNames** () const throw (cms::CMSEException)
Returns an Enumeration of all the names in the MapMessage object.
- virtual bool **itemExists** (const std::string &name) const throw (cms::CMSEException)
Indicates whether an item exists in this MapMessage object.

- virtual bool **getBoolean** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Boolean value of the Specified name.
- virtual void **setBoolean** (const std::string &name, bool value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a boolean value with the specified name into the Map.
- virtual unsigned char **getByte** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Byte value of the Specified name.
- virtual void **setByte** (const std::string &name, unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Byte value with the specified name into the Map.
- virtual std::vector< unsigned char > **getBytes** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Bytes value of the Specified name.
- virtual void **setBytes** (const std::string &name, const std::vector< unsigned char > &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Bytes value with the specified name into the Map.
- virtual char **getChar** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Char value of the Specified name.
- virtual void **setChar** (const std::string &name, char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Char value with the specified name into the Map.
- virtual double **getDouble** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Double value of the Specified name.
- virtual void **setDouble** (const std::string &name, double value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Double value with the specified name into the Map.
- virtual float **getFloat** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Float value of the Specified name.
- virtual void **setFloat** (const std::string &name, float value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Float value with the specified name into the Map.
- virtual int **getInt** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Int value of the Specified name.

- virtual void **setInt** (const std::string &name, int value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Int value with the specified name into the Map.
- virtual long long **getLong** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Long value of the Specified name.
- virtual void **setLong** (const std::string &name, long long value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Long value with the specified name into the Map.
- virtual short **getShort** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Short value of the Specified name.
- virtual void **setShort** (const std::string &name, short value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Short value with the specified name into the Map.
- virtual std::string **getString** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the String value of the Specified name.
- virtual void **setString** (const std::string &name, const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a String value with the specified name into the Map.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQMAPMESSAGE** = 25

Protected Member Functions

- **util::PrimitiveMap & getMap** () throw (decaf::lang::exceptions::NullPointerException)
Fetches a reference to this objects PrimitiveMap, if one needs to be created or unmarshaled, this will perform the correct steps.
- const **util::PrimitiveMap & getMap** () const throw (decaf::lang::exceptions::NullPointerException)
- virtual void **checkMapIsUnmarshalled** () const throw (decaf::lang::exceptions::NullPointerException)
Performs the unmarshal on the Map if needed, otherwise just returns.

6.35.1 Constructor & Destructor Documentation

6.35.1.1 `activemq::commands::ActiveMQMapMessage::ActiveMQMapMessage ()`

6.35.1.2 `virtual
activemq::commands::ActiveMQMapMessage::~~ActiveMQMapMessage ()` [virtual]

6.35.2 Member Function Documentation

6.35.2.1 `virtual void activemq::commands::ActiveMQMapMessage::beforeMarshal (wireformat::WireFormat * wireFormat) throw (decaf::io::IOException)` [virtual]

Perform any processing needed before an marshal.

Parameters

wireFormat - the OpenWireFormat object in use.

Implements `activemq::wireformat::MarshalAware` (p. 1994).

6.35.2.2 `virtual void activemq::commands::ActiveMQMapMessage::checkMapIsUnmarshalled () const throw (decaf::lang::exceptions::NullPointerException)` [protected, virtual]

Performs the unmarshal on the Map if needed, otherwise just returns.

6.35.2.3 `virtual void activemq::commands::ActiveMQMapMessage::clearBody () throw (cms::CMSException)` [virtual]

Clears out the body of the message.

This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::MapMessage >` (p. 331).

6.35.2.4 `virtual cms::MapMessage* activemq::commands::ActiveMQMapMessage::clone () const` [inline, virtual]

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns

new copy of this message

6.35.2.5 `virtual ActiveMQMapMessage* activemq::commands::ActiveMQMapMessage::cloneDataStructure ()`
`const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2023).

6.35.2.6 `virtual void activemq::commands::ActiveMQMapMessage::copyDataStructure (const DataStructure * src)`
`[virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2023).

6.35.2.7 `virtual bool activemq::commands::ActiveMQMapMessage::equals (const DataStructure * value)`
`const [virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::MapMessage >` (p. 331).

6.35.2.8 `virtual bool activemq::commands::ActiveMQMapMessage::getBoolean (const std::string & name)`
`const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Boolean value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.9 `virtual unsigned char activemq::commands::ActiveMQMapMessage::getByte (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Byte value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.10 `virtual std::vector<unsigned char> activemq::commands::ActiveMQMapMessage::getBytes (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Bytes value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.11 `virtual char activemq::commands::ActiveMQMapMessage::getChar (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Char value of the Specified name.

Parameters

name name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.12 `virtual unsigned char activemq::commands::ActiveMQMapMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns

new **DataStructure** (p. 1372) type copy.

Reimplemented from **activemq::commands::Message** (p. 2025).

6.35.2.13 `virtual double activemq::commands::ActiveMQMapMessage::getDouble (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Double value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.14 `virtual float activemq::commands::ActiveMQMapMessage::getFloat (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Float value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.15 `virtual int activemq::commands::ActiveMQMapMessage::getInt (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Int value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.16 `virtual long long activemq::commands::ActiveMQMapMessage::getLong (const std::string & name) const throw (cms::MessageFormatException, cms::CMSEException) [virtual]`

Returns the Long value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.17 `util::PrimitiveMap& activemq::commands::ActiveMQMapMessage::getMap () throw (decaf::lang::exceptions::NullPointerException) [protected]`

Fetches a reference to this objects PrimitiveMap, if one needs to be created or unmarshaled, this will perform the correct steps.

Returns

reference to a PrimitiveMap.

6.35.2.18 `const util::PrimitiveMap& activemq::commands::ActiveMQMapMessage::getMap () const throw (decaf::lang::exceptions::NullPointerException) [protected]`

6.35.2.19 `virtual std::vector< std::string > activemq::commands::ActiveMQMapMessage::getMapNames () const throw (cms::CMSEException) [virtual]`

Returns an Enumeration of all the names in the MapMessage object.

Returns

STL Vector of String values, each of which is the name of an item in the MapMessage

Exceptions

CMSEException - if the operation fails due to an internal error.

6.35.2.20 `virtual short activemq::commands::ActiveMQMapMessage::getShort (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Short value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.21 `virtual std::string activemq::commands::ActiveMQMapMessage::getString (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the String value of the Specified name.

Parameters

name Name of the value to fetch from the map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

6.35.2.22 `virtual bool activemq::commands::ActiveMQMapMessage::isMarshalAware () const [inline, virtual]`

Determine if this object is aware of marshaling and should have its before and after marshaling methods called.

Defaults to false.

Returns

true if aware of marshaling

Reimplemented from `activemq::commands::Message` (p. 2029).

6.35.2.23 `virtual bool activemq::commands::ActiveMQMapMessage::itemExists (const std::string & name) const throw (cms::CMSException) [virtual]`

Indicates whether an item exists in this MapMessage object.

Parameters

name String name of the Object in question

Returns

boolean value indicating if the name is in the map

Exceptions

CMSEException - if the operation fails due to an internal error.

6.35.2.24 virtual void activemq::commands::ActiveMQMapMessage::setBoolean
(const std::string & *name*, bool *value*) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]

Sets a boolean value with the specified name into the Map.

Parameters

name the name of the boolean

value the boolean value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2018) is in Read-only Mode.

6.35.2.25 virtual void activemq::commands::ActiveMQMapMessage::setByte
(const std::string & *name*, unsigned char *value*) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]

Sets a Byte value with the specified name into the Map.

Parameters

name the name of the Byte

value the Byte value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2018) is in Read-only Mode.

6.35.2.26 virtual void activemq::commands::ActiveMQMapMessage::setBytes (const std::string & *name*, const std::vector< unsigned char > & *value*) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]

Sets a Bytes value with the specified name into the Map.

Parameters

name The name of the Bytes
value The Bytes value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.
MessageNotWriteableException - if the **Message** (p. 2018) is in Read-only Mode.

6.35.2.27 `virtual void activemq::commands::ActiveMQMapMessage::setChar
 (const std::string & name, char value) throw (
 cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Char value with the specified name into the Map.

Parameters

name the name of the Char
value the Char value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.
MessageNotWriteableException - if the **Message** (p. 2018) is in Read-only Mode.

6.35.2.28 `virtual void activemq::commands::ActiveMQMapMessage::setDouble
 (const std::string & name, double value) throw (
 cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Double value with the specified name into the Map.

Parameters

name The name of the Double
value The Double value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.
MessageNotWriteableException - if the **Message** (p. 2018) is in Read-only Mode.

6.35.2.29 `virtual void activemq::commands::ActiveMQMapMessage::setFloat
 (const std::string & name, float value) throw (
 cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Float value with the specified name into the Map.

Parameters

name The name of the Float

value The Float value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the `Message` (p. 2018) is in Read-only Mode.

6.35.2.30 `virtual void activemq::commands::ActiveMQMapMessage::setInt (const std::string & name, int value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Int value with the specified name into the Map.

Parameters

name The name of the Int

value The Int value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the `Message` (p. 2018) is in Read-only Mode.

6.35.2.31 `virtual void activemq::commands::ActiveMQMapMessage::setLong (const std::string & name, long long value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Long value with the specified name into the Map.

Parameters

name The name of the Long

value The Long value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the `Message` (p. 2018) is in Read-only Mode.

6.35.2.32 `virtual void activemq::commands::ActiveMQMapMessage::setShort (const std::string & name, short value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Short value with the specified name into the Map.

Parameters

name The name of the Short

value The Short value to set in the Map

Exceptions

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the `Message` (p. 2018) is in Read-only Mode.

6.35.2.33 `virtual void activemq::commands::ActiveMQMapMessage::setString
(const std::string & name, const std::string & value) throw (cms::MessageNotWriteableException, cms::CMSException)` [virtual]

Sets a String value with the specified name into the Map.

Parameters

name The name of the String

value The String value to set in the Map

Exceptions

CMSException - if the operation fails due to an internal error.

MessageNotWriteableException - if the `Message` (p. 2018) is in Read-only Mode.

6.35.2.34 `virtual std::string activemq::commands::ActiveMQMapMessage::toString
() const` [virtual]

Returns a string containing the information for this `DataStructure` (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2033).

6.35.3 Field Documentation

6.35.3.1 `const unsigned char activemq::commands::ActiveMQMapMessage::ID_-
ACTIVEMQMAPMESSAGE = 25` [static]

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQMapMessage.h`

6.36 activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessage Class Reference

Marshaling code for Open Wire Format for `ActiveMQMapMessageMarshaller` (p. 284).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQMapMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller`:

Public Member Functions

- **ActiveMQMapMessageMarshaller** ()
- virtual **~ActiveMQMapMessageMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaller.
- virtual void **tightUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal1** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)
Write a object instance to data output stream.

6.36.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p.284).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.36.2 Constructor & Destructor Documentation

6.36.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller () [inline]`

6.36.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller () [inline, virtual]`

6.36.3 Member Function Documentation

6.36.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.36.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.36.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.36.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.36.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2177).

6.36.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

```
6.36.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQMapMessageMarshaller.h`

6.37 `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQMapMessageMarshaller` (p. 288).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQMapMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller`:

Public Member Functions

- **ActiveMQMapMessageMarshaller** ()
- virtual **~ActiveMQMapMessageMarshaller** ()

- virtual int **tightMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshall an object instance from the data input stream.
- virtual void **looseMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)
Write a object instance to data output stream.

6.37.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p.288).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.37.2 Constructor & Destructor Documentation

6.37.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller () [inline]`

6.37.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller () [inline, virtual]`

6.37.3 Member Function Documentation

6.37.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.37.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.37.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.37.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.37.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2185).

6.37.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

```
6.37.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQMapMessageMarshaller.h`

6.38 `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQMapMessageMarshaller` (p. 292).

```
#include <src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQMapMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller`:

Public Member Functions

- **ActiveMQMapMessageMarshaller** ()

6.38.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p.292).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.38.2 Constructor & Destructor Documentation

6.38.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller () [inline]`

6.38.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller () [inline, virtual]`

6.38.3 Member Function Documentation

6.38.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.38.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.38.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.38.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.38.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2173).

6.38.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

```
6.38.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

6.39.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p.296).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.39.2 Constructor & Destructor Documentation

6.39.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller () [inline]`

6.39.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller () [inline, virtual]`

6.39.3 Member Function Documentation

6.39.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.39.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.39.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.39.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.39.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2181).

6.39.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

```
6.39.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

6.40.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p.300).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.40.2 Constructor & Destructor Documentation

6.40.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller()` [inline]

6.40.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller()` [inline, virtual]

6.40.3 Member Function Documentation

6.40.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.40.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.40.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut)` throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167).

6.40.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168).

6.40.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

6.40.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.40.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2170).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQMapMessageMarshaller.h`

6.41 `activemq::commands::ActiveMQMessage` Class Reference

```
#include <src/main/activemq/commands/ActiveMQMessage.h>
```

Inheritance diagram for `activemq::commands::ActiveMQMessage`:

Public Member Functions

- **ActiveMQMessage** ()
- virtual **~ActiveMQMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual **ActiveMQMessage** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual **cms::Message** * **clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQMESSAGE** = 23

6.41.1 Constructor & Destructor Documentation

- 6.41.1.1 **activemq::commands::ActiveMQMessage::ActiveMQMessage** ()
- 6.41.1.2 **virtual activemq::commands::ActiveMQMessage::~~ActiveMQMessage** () [inline, virtual]

6.41.2 Member Function Documentation

- 6.41.2.1 **virtual cms::Message* activemq::commands::ActiveMQMessage::clone** () const [inline, virtual]

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns

new copy of this message

6.41.2.2 `virtual ActiveMQMessage* activemq::commands::ActiveMQMessage::cloneDataStructure () const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2023).

6.41.2.3 `virtual void activemq::commands::ActiveMQMessage::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2023).

6.41.2.4 `virtual bool activemq::commands::ActiveMQMessage::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::Message >` (p. 331).

6.41.2.5 `virtual unsigned char activemq::commands::ActiveMQMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns

new `DataStructure` (p. 1372) type copy.

Reimplemented from `activemq::commands::Message` (p. 2025).

6.41.2.6 `virtual std::string activemq::commands::ActiveMQMessage::toString ()`
`const [virtual]`

Returns a string containing the information for this **DataSet** (p.1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2033).

6.41.3 Field Documentation

6.41.3.1 `const unsigned char activemq::commands::ActiveMQMessage::ID_ -`
`ACTIVEMQMESSAGE = 23 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQMessage.h`

6.42 `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller` Class Reference

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 307).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller`:

Public Member Functions

- **ActiveMQMessageMarshaller** ()
- `virtual ~ActiveMQMessageMarshaller` ()
- `virtual commands::DataSet * createObject () const`
Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaler.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataSet *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataSet *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.42.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 307). NOTE! This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.42.2 Constructor & Destructor Documentation

6.42.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller () [inline]`

6.42.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::~~ActiveMQMessageMarshaller () [inline, virtual]`

6.42.3 Member Function Documentation

6.42.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.42.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.42.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.42.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.42.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2177).

```
6.42.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

```
6.42.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQMessageMarshaller.h`

6.43 `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMa` Class Reference

Marshaling code for Open Wire Format for `ActiveMQMessageMarshaller` (p. 311).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller`:

Public Member Functions

- `ActiveMQMessageMarshaller ()`
- `virtual ~ActiveMQMessageMarshaller ()`

Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.

- virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.43.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p.311). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.43.2 Constructor & Destructor Documentation

6.43.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller () [inline]`

6.43.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::~~ActiveMQMessageMarshaller () [inline, virtual]`

6.43.3 Member Function Documentation

6.43.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p.1331).

6.43.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p.1336).

```

6.43.3.3 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::looseMarshal
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataOutputStream * dataOut ) throw (
decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller`
(p. 2184).

```

6.43.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::looseUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn ) throw (
decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller`
(p. 2184).

```

6.43.3.5 virtual int ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::tightMarshal1
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
) [virtual]

```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2185).

```
6.43.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

```
6.43.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

The documentation for this class was generated from the following file:

6.44.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::~ActiveMQMessageMarshaller () [inline, virtual]`

6.44.3 Member Function Documentation

6.44.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.44.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.44.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.44.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.44.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2173).

```
6.44.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

```
6.44.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

The documentation for this class was generated from the following file:

6.45.2 Constructor & Destructor Documentation

6.45.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller () [inline]`

6.45.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::~ActiveMQMessageMarshaller () [inline, virtual]`

6.45.3 Member Function Documentation

6.45.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.45.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.45.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.45.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.45.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2181).

```
6.45.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

```
6.45.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

The documentation for this class was generated from the following file:

6.46.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::~ActiveMQMessageMarshaller () [inline, virtual]`

6.46.3 Member Function Documentation

6.46.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.46.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.46.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167).

6.46.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168).

6.46.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.46.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.46.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2170).

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/marshal/v2/**ActiveMQMessageMarshaller.h**

6.47 activemq::commands::ActiveMQMessageTemplate< T > Class Template Reference

- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual void **clearBody** () throw (cms::CMSException)
Clears out the body of the message.
- virtual void **clearProperties** () throw (cms::CMSException)
Clears the message properties.
- virtual std::vector< std::string > **getPropertyNames** () const throw (cms::CMSException)
Retrieves the property names.
- virtual bool **propertyExists** (const std::string &name) const throw (cms::CMSException)
Indicates whether or not a given property exists.
- virtual bool **getBooleanProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSException)

Gets a boolean property.

- virtual unsigned char **getByteProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a byte property.

- virtual double **getDoubleProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a double property.

- virtual float **getFloatProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a float property.

- virtual int **getIntProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a int property.

- virtual long long **getLongProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a long property.

- virtual short **getShortProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a short property.

- virtual std::string **getStringProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a string property.

- virtual void **setBooleanProperty** (const std::string &name, bool value) throw (cms::MessageNot WriteableException, cms::CMSEException)

Sets a boolean property.

- virtual void **setByteProperty** (const std::string &name, unsigned char value) throw (cms::MessageNot WriteableException, cms::CMSEException)

Sets a byte property.

- virtual void **setDoubleProperty** (const std::string &name, double value) throw (cms::MessageNot WriteableException, cms::CMSEException)

Sets a double property.

- virtual void **setFloatProperty** (const std::string &name, float value) throw (cms::MessageNot WriteableException, cms::CMSEException)

Sets a float property.

- virtual void **setIntProperty** (const std::string &name, int value) throw (cms::MessageNot WriteableException, cms::CMSEException)

Sets a int property.

- virtual void **setLongProperty** (const std::string &name, long long value) throw (cms::MessageNotWriteableException, cms::CMSException)
Sets a long property.
- virtual void **setShortProperty** (const std::string &name, short value) throw (cms::MessageNotWriteableException, cms::CMSException)
Sets a short property.
- virtual void **setStringProperty** (const std::string &name, const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSException)
Sets a string property.
- virtual std::string **getCMSCorrelationID** () const throw (cms::CMSException)
Get the Correlation Id for this message.
- virtual void **setCMSCorrelationID** (const std::string &correlationId) throw (cms::CMSException)
Sets the Correlation Id used by this message.
- virtual int **getCMSDeliveryMode** () const throw (cms::CMSException)
Gets the DeliveryMode for this message.
- virtual void **setCMSDeliveryMode** (int mode) throw (cms::CMSException)
Sets the DeliveryMode for this message.
- virtual const cms::Destination * **getCMSDestination** () const throw (cms::CMSException)
*Gets the Destination for this **Message** (p. 2018), returns a.*
- virtual void **setCMSDestination** (const cms::Destination *destination) throw (cms::CMSException)
Sets the Destination for this message.
- virtual long long **getCMSExpiration** () const throw (cms::CMSException)
*Gets the Expiration Time for this **Message** (p. 2018).*
- virtual void **setCMSExpiration** (long long expireTime) throw (cms::CMSException)
Sets the Expiration Time for this message.
- virtual std::string **getCMSMessageID** () const throw (cms::CMSException)
*Gets the CMS **Message** (p. 2018) Id for this **Message** (p. 2018).*
- virtual void **setCMSMessageID** (const std::string &id AMQCPP_UNUSED) throw (cms::CMSException)
*Sets the CMS **Message** (p. 2018) Id for this message.*
- virtual int **getCMSPriority** () const throw (cms::CMSException)
*Gets the Priority Value for this **Message** (p. 2018).*
- virtual void **setCMSPriority** (int priority) throw (cms::CMSException)

Sets the Priority Value for this message.

- virtual bool **getCMSRedelivered** () const throw (cms::CMSEException)

*Gets the Redelivered Flag for this **Message** (p. 2018).*

- virtual void **setCMSRedelivered** (bool redelivered AMQCPP_UNUSED) throw (cms::CMSEException)

Sets the Redelivered Flag for this message.

- virtual const cms::Destination * **getCMSReplyTo** () const throw (cms::CMSEException)

*Gets the CMS Reply To Address for this **Message** (p. 2018).*

- virtual void **setCMSReplyTo** (const cms::Destination *destination) throw (cms::CMSEException)

Sets the CMS Reply To Address for this message.

- virtual long long **getCMSTimestamp** () const throw (cms::CMSEException)

*Gets the Time Stamp for this **Message** (p. 2018).*

- virtual void **setCMSTimestamp** (long long timeStamp) throw (cms::CMSEException)

Sets the Time Stamp for this message.

- virtual std::string **getCMSType** () const throw (cms::CMSEException)

*Gets the CMS **Message** (p. 2018) Type for this **Message** (p. 2018).*

- virtual void **setCMSType** (const std::string &type) throw (cms::CMSEException)

*Sets the CMS **Message** (p. 2018) Type for this message.*

```
template<typename T> class activemq::commands::ActiveMQMessageTemplate< T
>
```

6.47.1 Constructor & Destructor Documentation

6.47.1.1 `template<typename T>
activemq::commands::ActiveMQMessageTemplate< T
>::ActiveMQMessageTemplate () [inline]`

6.47.1.2 `template<typename T> virtual
activemq::commands::ActiveMQMessageTemplate< T
>::~~ActiveMQMessageTemplate () [inline, virtual]`

6.47.2 Member Function Documentation

6.47.2.1 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::acknowledge () const throw (cms::IllegalStateException,
cms::CMSException) [inline, virtual]`

Acknowledges all consumed messages of the session of this consumed message.

6.47.2.2 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::clearBody () throw (cms::CMSException) [inline, virtual]`

Clears out the body of the message.

This does not clear the headers or properties.

Reimplemented in `activemq::commands::ActiveMQBytesMessage` (p. 170), `activemq::commands::ActiveMQMapMessage` (p. 275), `activemq::commands::ActiveMQStreamMessage` (p. 425), and `activemq::commands::ActiveMQTextMessage` (p. 527).

6.47.2.3 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::clearProperties () throw (cms::CMSException) [inline, virtual]`

Clears the message properties.

Does not clear the body or header values.

6.47.2.4 `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::equals (const DataStructure * value) const [inline, virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::Message` (p. 2023).

Reimplemented in `activemq::commands::ActiveMQBlobMessage` (p. 144), `activemq::commands::ActiveMQBytesMessage` (p. 171), `activemq::commands::ActiveMQMapMessage` (p. 276), `activemq::commands::ActiveMQMessage` (p. 306), `activemq::commands::ActiveMQObjectMessage` (p. 346), `activemq::commands::ActiveMQStreamMessage` (p. 426), and `activemq::commands::ActiveMQTextMessage` (p. 527).

- 6.47.2.5** `template<typename T> void
activemq::commands::ActiveMQMessageTemplate< T
>::failIfReadOnlyBody () const [inline, protected]`
- 6.47.2.6** `template<typename T> void
activemq::commands::ActiveMQMessageTemplate< T
>::failIfReadOnlyProperties () const [inline, protected]`
- 6.47.2.7** `template<typename T> void
activemq::commands::ActiveMQMessageTemplate< T
>::failIfWriteOnlyBody () const [inline, protected]`
- 6.47.2.8** `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::getBooleanProperty (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [inline, virtual]`

Gets a boolean property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

- 6.47.2.9** `template<typename T> virtual unsigned char
activemq::commands::ActiveMQMessageTemplate< T >::getByteProperty
(const std::string & name) const throw (cms::MessageFormatException,
cms::CMSException) [inline, virtual]`

Gets a byte property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

6.47.2.10 `template<typename T> virtual std::string
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSCorrelationID () const throw (cms::CMSEException)
[inline, virtual]`

Get the Correlation Id for this message.

Returns

string representation of the correlation Id

Exceptions

CMSEException

6.47.2.11 `template<typename T> virtual int
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSDeliveryMode () const throw (cms::CMSEException)
[inline, virtual]`

Gets the DeliveryMode for this message.

Returns

DeliveryMode enumerated value.

Exceptions

CMSEException

6.47.2.12 `template<typename T> virtual const cms::Destination*
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSDestination () const throw (cms::CMSEException)
[inline, virtual]`

Gets the Destination for this **Message** (p. 2018), returns a.

Returns

Destination object

Exceptions

CMSEException

6.47.2.13 `template<typename T> virtual long long
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSExpiration () const throw (cms::CMSException) [inline,
virtual]`

Gets the Expiration Time for this **Message** (p. 2018).

Returns

time value

Exceptions

CMSException

6.47.2.14 `template<typename T> virtual std::string
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSMessageID () const throw (cms::CMSException)
[inline, virtual]`

Gets the CMS **Message** (p. 2018) Id for this **Message** (p. 2018).

Returns

time value

Exceptions

CMSException

6.47.2.15 `template<typename T> virtual int
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSPriority () const throw (cms::CMSException) [inline,
virtual]`

Gets the Priority Value for this **Message** (p. 2018).

Returns

priority value

Exceptions

CMSException

6.47.2.16 `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSRedelivered () const throw (cms::CMSException)
[inline, virtual]`

Gets the Redelivered Flag for this **Message** (p. 2018).

Returns

redelivered value

Exceptions

CMSException

6.47.2.17 `template<typename T> virtual const cms::Destination*
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSReplyTo () const throw (cms::CMSException) [inline,
virtual]`

Gets the CMS Reply To Address for this **Message** (p.2018).

Returns

Reply To Value

Exceptions

CMSException

6.47.2.18 `template<typename T> virtual long long
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSTimestamp () const throw (cms::CMSException)
[inline, virtual]`

Gets the Time Stamp for this **Message** (p.2018).

Returns

time stamp value

Exceptions

CMSException

6.47.2.19 `template<typename T> virtual std::string
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSType () const throw (cms::CMSException) [inline,
virtual]`

Gets the CMS **Message** (p.2018) Type for this **Message** (p.2018).

Returns

type value

Exceptions

CMSException

```
6.47.2.20  template<typename T> virtual double
           activemq::commands::ActiveMQMessageTemplate< T
           >::getDoubleProperty ( const std::string &  name ) const throw (
           cms::MessageFormatException, cms::CMSException ) [inline, virtual]
```

Gets a double property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.21  template<typename T> virtual float
           activemq::commands::ActiveMQMessageTemplate< T
           >::getFloatProperty ( const std::string &  name ) const throw (
           cms::MessageFormatException, cms::CMSException ) [inline, virtual]
```

Gets a float property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.22  template<typename T> virtual int
           activemq::commands::ActiveMQMessageTemplate< T
           >::getIntProperty ( const std::string &  name ) const throw (
           cms::MessageFormatException, cms::CMSException ) [inline, virtual]
```

Gets a int property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.23  template<typename T> virtual long long
           activemq::commands::ActiveMQMessageTemplate< T
           >::getLongProperty ( const std::string & name ) const throw (
           cms::MessageFormatException, cms::CMSEException ) [inline, virtual]
```

Gets a long property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.24  template<typename T> virtual std::vector<std::string>
           activemq::commands::ActiveMQMessageTemplate< T
           >::getPropertyNames ( ) const throw ( cms::CMSEException ) [inline,
           virtual]
```

Retrieves the property names.

Returns

The complete set of property names currently in this message.

```
6.47.2.25  template<typename T> virtual short
           activemq::commands::ActiveMQMessageTemplate< T
           >::getShortProperty ( const std::string & name ) const throw (
           cms::MessageFormatException, cms::CMSEException ) [inline, virtual]
```

Gets a short property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

6.47.2.26 `template<typename T> virtual std::string
activemq::commands::ActiveMQMessageTemplate< T
>::getStringProperty (const std::string & name) const throw (
cms::MessageFormatException, cms::CMSException) [inline, virtual]`

Gets a string property.

Parameters

name The name of the property to retrieve.

Returns

The value for the named property.

Exceptions

CMSException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

6.47.2.27 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::onSend () [inline, virtual]`

Resets the **Message** (p. 2018) to a Read-Only state.

Reimplemented from **activemq::commands::Message** (p. 2030).

Reimplemented in **activemq::commands::ActiveMQBytesMessage** (p. 172), and **activemq::commands::ActiveMQStreamMessage** (p. 426).

6.47.2.28 `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::propertyExists (const std::string & name) const throw (
cms::CMSException) [inline, virtual]`

Indicates whether or not a given property exists.

Parameters

name The name of the property to look up.

Returns

True if the property exists in this message.

6.47.2.29 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setBooleanProperty (const std::string & name, bool value) throw (
cms::MessageNotWriteableException, cms::CMSException) [inline,
virtual]`

Sets a boolean property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

```
6.47.2.30  template<typename T> virtual void
           activemq::commands::ActiveMQMessageTemplate< T
           >::setByteProperty ( const std::string & name, unsigned char value )
           throw ( cms::MessageNotWriteableException, cms::CMSException )
           [inline, virtual]
```

Sets a byte property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

```
6.47.2.31  template<typename T> virtual void
           activemq::commands::ActiveMQMessageTemplate< T
           >::setCMSCorrelationID ( const std::string & correlationId ) throw (
           cms::CMSException ) [inline, virtual]
```

Sets the Correlation Id used by this message.

Parameters

correlationId - String representing the correlation id.

Exceptions

CMSException

```
6.47.2.32  template<typename T> virtual void
           activemq::commands::ActiveMQMessageTemplate< T
           >::setCMSDeliveryMode ( int mode ) throw ( cms::CMSException )
           [inline, virtual]
```

Sets the DeliveryMode for this message.

Parameters

mode - DeliveryMode enumerated value.

Exceptions

CMSException

```
6.47.2.33  template<typename T> virtual void
             activemq::commands::ActiveMQMessageTemplate< T
             >::setCMSDestination ( const cms::Destination * destination ) throw (
             cms::CMSException ) [inline, virtual]
```

Sets the Destination for this message.

Parameters

destination - Destination Object

Exceptions

CMSException

```
6.47.2.34  template<typename T> virtual void
             activemq::commands::ActiveMQMessageTemplate< T
             >::setCMSExpiration ( long long expireTime ) throw (
             cms::CMSException ) [inline, virtual]
```

Sets the Expiration Time for this message.

Parameters

expireTime - time value

Exceptions

CMSException

```
6.47.2.35  template<typename T> virtual void
             activemq::commands::ActiveMQMessageTemplate< T
             >::setCMSMessageID ( const std::string &id AMQCPP_UNUSED )
             throw ( cms::CMSException ) [inline, virtual]
```

Sets the CMS **Message** (p. 2018) Id for this message.

Parameters

id - time value

Exceptions

CMSException

6.47.2.36 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSPriority (int priority) throw (cms::CMSException)
[inline, virtual]`

Sets the Priority Value for this message.

Parameters

priority - priority value for this message

Exceptions

CMSException

6.47.2.37 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSRedelivered (bool redelivered AMQCPP_UNUSED)
throw (cms::CMSException) [inline, virtual]`

Sets the Redelivered Flag for this message.

Parameters

redelivered - boolean redelivered value

Exceptions

CMSException

6.47.2.38 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSReplyTo (const cms::Destination * destination) throw (cms::CMSException) [inline, virtual]`

Sets the CMS Reply To Address for this message.

Parameters

destination Pointer to the CMS Destination that is the Reply-To value.

Exceptions

CMSException

6.47.2.39 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSTimestamp (long long timeStamp) throw (cms::CMSException) [inline, virtual]`

Sets the Time Stamp for this message.

Parameters

timeStamp - integer time stamp value

Exceptions

CMSException

```
6.47.2.40  template<typename T> virtual void
           activemq::commands::ActiveMQMessageTemplate< T
           >::setCMSType ( const std::string & type ) throw ( cms::CMSException
           ) [inline, virtual]
```

Sets the CMS **Message** (p. 2018) Type for this message.

Parameters

type - message type value string

Exceptions

CMSException

```
6.47.2.41  template<typename T> virtual void
           activemq::commands::ActiveMQMessageTemplate< T
           >::setDoubleProperty ( const std::string & name, double value )
           throw ( cms::MessageNotWriteableException, cms::CMSException )
           [inline, virtual]
```

Sets a double property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

```
6.47.2.42  template<typename T> virtual void
           activemq::commands::ActiveMQMessageTemplate< T
           >::setFloatProperty ( const std::string & name, float value ) throw (
           cms::MessageNotWriteableException, cms::CMSException ) [inline,
           virtual]
```

Sets a float property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.43 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setIntProperty (const std::string & name, int value) throw (cms::MessageNotWriteableException, cms::CMSException) [inline, virtual]`

Sets a int property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.44 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setLongProperty (const std::string & name, long long value)
throw (cms::MessageNotWriteableException, cms::CMSException)
[inline, virtual]`

Sets a long property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.45 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setShortProperty (const std::string & name, short value) throw (cms::MessageNotWriteableException, cms::CMSException) [inline, virtual]`

Sets a short property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSEException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

```
6.47.2.46  template<typename T> virtual void
            activemq::commands::ActiveMQMessageTemplate< T
            >::setStringProperty (  const std::string &  name,  const
            std::string &  value  ) throw ( cms::MessageNotWriteableException,
            cms::CMSEException ) [inline, virtual]
```

Sets a string property.

Parameters

name The name of the property to retrieve.

value The value for the named property.

Exceptions

CMSEException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.48 activemq::commands::ActiveMQObjectMessage Class Reference

```
#include <src/main/activemq/commands/ActiveMQObjectMessage.h>
```

Inheritance diagram for activemq::commands::ActiveMQObjectMessage:

Public Member Functions

- **ActiveMQObjectMessage** ()
- virtual **~ActiveMQObjectMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual **ActiveMQObjectMessage * cloneDataStructure** () const

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual **cms::Message** * **clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQOBJECTMESSAGE** = 26

6.48.1 Constructor & Destructor Documentation

6.48.1.1 **activemq::commands::ActiveMQObjectMessage::ActiveMQObjectMessage**
()

6.48.1.2 **virtual**
activemq::commands::ActiveMQObjectMessage::~~ActiveMQObjectMessage
() [inline, virtual]

6.48.2 Member Function Documentation

6.48.2.1 **virtual cms::Message*** **activemq::commands::ActiveMQObjectMessage::clone** ()
const [inline, virtual]

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns

new copy of this message

6.48.2.2 **virtual ActiveMQObjectMessage*** **activemq::commands::ActiveMQObjectMessage::cloneDataStructure** ()
const [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2023).

6.48.2.3 `virtual void activemq::commands::ActiveMQObjectMessage::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

`src` - Source Object

Reimplemented from `activemq::commands::Message` (p. 2023).

6.48.2.4 `virtual bool activemq::commands::ActiveMQObjectMessage::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate<cms::ObjectMessage>` (p. 331).

6.48.2.5 `virtual unsigned char activemq::commands::ActiveMQObjectMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns

new `DataStructure` (p. 1372) type copy.

Reimplemented from `activemq::commands::Message` (p. 2025).

6.48.2.6 `virtual std::string activemq::commands::ActiveMQObjectMessage::toString () const [virtual]`

Returns a string containing the information for this `DataStructure` (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2033).

6.48.3 Field Documentation

- 6.48.3.1 `const unsigned char activemq::commands::ActiveMQObjectMessage::ID_ - ACTIVEMQOBJECTMESSAGE = 26` [static]

The documentation for this class was generated from the following file:

6.49 activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller Class Reference

Marshaling code for Open Wire Format for `ActiveMQObjectMessageMarshaller` (p. 347).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQObjectMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller`:

Public Member Functions

- `ActiveMQObjectMessageMarshaller ()`
- `virtual ~ActiveMQObjectMessageMarshaller ()`
- `virtual commands::DataStructure * createObject () const`
Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaler.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshall an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`
Un-marshall an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.49.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 347).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.49.2 Constructor & Destructor Documentation

6.49.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller () [inline]`

6.49.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::~ActiveMQObjectMessageMarshaller () [inline, virtual]`

6.49.3 Member Function Documentation

6.49.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.49.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.49

activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller

Class Reference

351

```
6.49.3.3 virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::looseMarshal(
    ( OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut ) throw (
    decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

```
6.49.3.4 virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::looseUnmarshal(
    ( OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn ) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

```
6.49.3.5 virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::tightMarshal(
    ( OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
    ) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2177).

```
6.49.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

```
6.49.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::tightUnma
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQObjectMessageMarshaller.h`

6.50 activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller Class Reference

Marshaling code for Open Wire Format for `ActiveMQObjectMessageMarshaller` (p. 351).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQObjectMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller`:

Public Member Functions

- `ActiveMQObjectMessageMarshaller ()`
- `virtual ~ActiveMQObjectMessageMarshaller ()`
- `virtual commands::DataStructure * createObject () const`
Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaller.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`

Un-marshall an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.50.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 351).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.50.2 Constructor & Destructor Documentation

6.50.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller () [inline]`

6.50.3 Member Function Documentation

6.50.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.50.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.50

activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller

Class Reference

355

```
6.50.3.3 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::looseMars
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataOutputStream * dataOut ) throw (
decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller`
(p. 2184).

```
6.50.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::looseUnmars
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn ) throw (
decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller`
(p. 2184).

```
6.50.3.5 virtual int ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::tightMars
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2185).

```
6.50.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

```
6.50.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::tightUnma
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

6.51.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::~ActiveMQObjectMessageMarshaller () [inline, virtual]`

6.51.3 Member Function Documentation

6.51.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.51.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

```

6.51.3.3 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::looseMars
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataOutputStream * dataOut ) throw (
decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

```

6.51.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::looseUnmars
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn ) throw (
decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

```

6.51.3.5 virtual int ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::tightMars
( OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
) [virtual]

```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2173).

```
6.51.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

```
6.51.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::tightUnma
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

The documentation for this class was generated from the following file:

Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaller.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`

Un-marshall an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.52.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 359).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.52.2 Constructor & Destructor Documentation

6.52.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller () [inline]`

6.52.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::~ActiveMQObjectMessageMarshaller () [inline, virtual]`

6.52.3 Member Function Documentation

6.52.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.52.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

```

6.52.3.3 virtual void ac-
        tivemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::looseMars
        ( OpenWireFormat * wireFormat, commands::DataStructure *
          dataStructure, decaf::io::DataOutputStream * dataOut ) throw (
          decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

```

6.52.3.4 virtual void ac-
        tivemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::looseUnm
        ( OpenWireFormat * wireFormat, commands::DataStructure *
          dataStructure, decaf::io::DataInputStream * dataIn ) throw (
          decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

```

6.52.3.5 virtual int ac-
        tivemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::tightMars
        ( OpenWireFormat * wireFormat, commands::DataStructure *
          dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
        ) [virtual]

```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2181).

```
6.52.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

```
6.52.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::tightUnma
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v5/ActiveMQObjectMessageMarshaller.h`

6.53 activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller Class Reference

Marshaling code for Open Wire Format for `ActiveMQObjectMessageMarshaller` (p. 363).

```
#include <src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQObjectMessageMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller`:

Public Member Functions

- `ActiveMQObjectMessageMarshaller ()`
- `virtual ~ActiveMQObjectMessageMarshaller ()`
- `virtual commands::DataStructure * createObject () const`
Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaller.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`

Un-marshall an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.53.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 363).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.53.2 Constructor & Destructor Documentation

6.53.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller () [inline]`

6.53.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::~ActiveMQObjectMessageMarshaller () [inline, virtual]`

6.53.3 Member Function Documentation

6.53.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.53.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

```

6.53.3.3 virtual void ac-
          tivemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::looseMars
          ( OpenWireFormat * wireFormat, commands::DataStructure *
            dataStructure, decaf::io::DataOutputStream * dataOut ) throw (
            decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167).

```

6.53.3.4 virtual void ac-
          tivemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::looseUnmars
          ( OpenWireFormat * wireFormat, commands::DataStructure *
            dataStructure, decaf::io::DataInputStream * dataIn ) throw (
            decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168).

```

6.53.3.5 virtual int ac-
          tivemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::tightMars
          ( OpenWireFormat * wireFormat, commands::DataStructure *
            dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
            ) [virtual]

```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.53.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.53.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::tightUnma
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2170).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQObjectMessageMarshaller.h`

6.54 activemq::core::ActiveMQProducer Class Reference

```
#include <src/main/activemq/core/ActiveMQProducer.h>
```

Inheritance diagram for **activemq::core::ActiveMQProducer**:

Public Member Functions

- **ActiveMQProducer** (const **Pointer**< **commands::ProducerInfo** > &producerInfo, const **Pointer**< **cms::Destination** > &destination, **ActiveMQSession** *session)

*Constructor, creates an instance of an **ActiveMQProducer** (p. 367).*

- virtual **~ActiveMQProducer** ()
- virtual void **close** () throw (cms::CMSException)

Closes the Consumer.

- virtual void **send** (cms::Message *message) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)

Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it.

- virtual void **send** (cms::Message *message, int deliveryMode, int priority, long long timeToLive) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)

Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it.

- virtual void **send** (const cms::Destination *destination, cms::Message *message) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)

Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it.

- virtual void **send** (const cms::Destination *destination, cms::Message *message, int deliveryMode, int priority, long long timeToLive) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)

Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it.

- virtual void **setDeliveryMode** (int mode) throw (cms::CMSEException)
Sets the delivery mode for this Producer.
- virtual int **getDeliveryMode** () const throw (cms::CMSEException)
Gets the delivery mode for this Producer.
- virtual void **setDisableMessageID** (bool value) throw (cms::CMSEException)
Sets if Message Ids are disabled for this Producer.
- virtual bool **getDisableMessageID** () const throw (cms::CMSEException)
Gets if Message Ids are disabled for this Producer.
- virtual void **setDisableMessageTimeStamp** (bool value) throw (cms::CMSEException)
Sets if Message Time Stamps are disabled for this Producer.
- virtual bool **getDisableMessageTimeStamp** () const throw (cms::CMSEException)
Gets if Message Time Stamps are disabled for this Producer.
- virtual void **setPriority** (int priority) throw (cms::CMSEException)
Sets the Priority that this Producers sends messages at.
- virtual int **getPriority** () const throw (cms::CMSEException)
Gets the Priority level that this producer sends messages at.
- virtual void **setTimeToLive** (long long time) throw (cms::CMSEException)
Sets the Time to Live that this Producers sends messages with.
- virtual long long **getTimeToLive** () const throw (cms::CMSEException)
Gets the Time to Live that this producer sends messages with.
- virtual void **setSendTimeout** (long long time) throw (cms::CMSEException)
Sets the Send Timeout that this Producers sends messages with.
- virtual long long **getSendTimeout** () const throw (cms::CMSEException)
Gets the Send Timeout that this producer sends messages with.
- bool **isClosed** () const
- const **commands::ProducerInfo** & **getProducerInfo** () const
Retries this object ProducerInfo pointer.
- **commands::ProducerId** & **getProducerId** () const
Retries this object ProducerId or NULL if closed.
- virtual void **onProducerAck** (const **commands::ProducerAck** &ack)
Handles the work of Processing a ProducerAck Command from the Broker.

6.54.1 Constructor & Destructor Documentation

6.54.1.1 `activemq::core::ActiveMQProducer::ActiveMQProducer (const Pointer< commands::ProducerInfo > & producerInfo, const Pointer< cms::Destination > & destination, ActiveMQSession * session)`

Constructor, creates an instance of an **ActiveMQProducer** (p. 367).

Parameters

producerInfo Pointer to a ProducerInfo command which identifies this producer.
destination The assigned Destination this Producer sends to, or null if not set. The Producer does not own the Pointer passed.
session The Session which is the parent of this Producer.

6.54.1.2 `virtual activemq::core::ActiveMQProducer::~~ActiveMQProducer ()`
 [virtual]

6.54.2 Member Function Documentation

6.54.2.1 `virtual void activemq::core::ActiveMQProducer::close () throw (cms::CMSException)` [virtual]

Closes the Consumer.

This will return all allocated resources and purge any outstanding messages. This method will block if there is a call to receive in progress, or a dispatch to a MessageListener in place

Exceptions

CMSException

Implements **cms::Closeable** (p. 952).

6.54.2.2 `virtual int activemq::core::ActiveMQProducer::getDeliveryMode () const throw (cms::CMSException)` [inline, virtual]

Gets the delivery mode for this Producer.

Returns

The DeliveryMode

Implements **cms::MessageProducer** (p. 2191).

6.54.2.3 `virtual bool activemq::core::ActiveMQProducer::getDisableMessageID () const throw (cms::CMSException)` [inline, virtual]

Gets if Message Ids are disabled for this Producer.

Returns

a boolean indicating state enable / disable (true / false) for MessageIds.

Implements **cms::MessageProducer** (p. 2191).

6.54.2.4 `virtual bool activemq::core::ActiveMQProducer::getDisableMessageTimeStamp () const throw (cms::CMSException) [inline, virtual]`

Gets if Message Time Stamps are disabled for this Producer.

Returns

boolean indicating state of enable / disable (true / false)

Implements `cms::MessageProducer` (p. 2192).

6.54.2.5 `virtual int activemq::core::ActiveMQProducer::getPriority () const throw (cms::CMSException) [inline, virtual]`

Gets the Priority level that this producer sends messages at.

Returns

int based priority level

Implements `cms::MessageProducer` (p. 2192).

6.54.2.6 `commands::ProducerId& activemq::core::ActiveMQProducer::getProducerId () const [inline]`

Retries this object ProducerId or NULL if closed.

Returns

ProducerId Reference

6.54.2.7 `const commands::ProducerInfo& activemq::core::ActiveMQProducer::getProducerInfo () const [inline]`

Retries this object ProducerInfo pointer.

Returns

ProducerInfo Reference

6.54.2.8 `virtual long long activemq::core::ActiveMQProducer::getSendTimeout () const throw (cms::CMSException) [inline, virtual]`

Gets the Send Timeout that this producer sends messages with.

Returns

The default send timeout value in milliseconds.

6.54.2.9 `virtual long long activemq::core::ActiveMQProducer::getTimeToLive ()
const throw (cms::CMSException) [inline, virtual]`

Gets the Time to Live that this producer sends messages with.

Returns

The default time to live value in milliseconds.

Implements **cms::MessageProducer** (p. 2192).

6.54.2.10 `bool activemq::core::ActiveMQProducer::isClosed () const [inline]`

Returns

true if this Producer has been closed.

6.54.2.11 `virtual void activemq::core::ActiveMQProducer::onProducerAck (const
commands::ProducerAck & ack) [virtual]`

Handles the work of Processing a ProducerAck Command from the Broker.

Parameters

ack - The ProducerAck message received from the Broker.

6.54.2.12 `virtual void activemq::core::ActiveMQProducer::send (const
cms::Destination * destination, cms::Message * message,
int deliveryMode, int priority, long long timeToLive)
throw (cms::CMSException, cms::MessageFormatException,
cms::InvalidDestinationException, cms::UnsupportedOperationException
) [virtual]`

Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it.

Parameters

destination The destination on which to send the message

message The message to be sent.

deliveryMode The delivery mode to be used.

priority The priority for this message.

timeToLive The time to live value for this message in milliseconds.

Exceptions

CMSException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements **cms::MessageProducer** (p. 2193).

6.54.2.13 `virtual void activemq::core::ActiveMQProducer::send (cms::Message *
message) throw (cms::CMSException, cms::MessageFormatException,
cms::InvalidDestinationException, cms::UnsupportedOperationException
) [virtual]`

Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it.

Uses default values for deliveryMode, priority, and time to live.

Parameters

message The message to be sent.

Exceptions

CMSException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements **cms::MessageProducer** (p. 2194).

6.54.2.14 `virtual void activemq::core::ActiveMQProducer::send (cms::Message
* message, int deliveryMode, int priority, long long timeToLive
) throw (cms::CMSException, cms::MessageFormatException,
cms::InvalidDestinationException, cms::UnsupportedOperationException
) [virtual]`

Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it.

Parameters

message The message to be sent.

deliveryMode The delivery mode to be used.

priority The priority for this message.

timeToLive The time to live value for this message in milliseconds.

Exceptions

CMSException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements **cms::MessageProducer** (p. 2192).

6.54.2.15 `virtual void activemq::core::ActiveMQProducer::send (const cms::Destination * destination, cms::Message * message) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException) [virtual]`

Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it.

Uses default values for deliveryMode, priority, and time to live.

Parameters

destination The destination on which to send the message

message the message to be sent.

Exceptions

CMSException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements `cms::MessageProducer` (p. 2194).

6.54.2.16 `virtual void activemq::core::ActiveMQProducer::setDeliveryMode (int mode) throw (cms::CMSException) [inline, virtual]`

Sets the delivery mode for this Producer.

Parameters

mode - The DeliveryMode to use for Message sends.

Implements `cms::MessageProducer` (p. 2195).

6.54.2.17 `virtual void activemq::core::ActiveMQProducer::setDisableMessageID (bool value) throw (cms::CMSException) [inline, virtual]`

Sets if Message Ids are disabled for this Producer.

Parameters

value - boolean indicating enable / disable (true / false)

Implements `cms::MessageProducer` (p. 2195).

6.54.2.18 `virtual void activemq::core::ActiveMQProducer::setDisableMessageTimeStamp (bool value) throw (cms::CMSExcption) [inline, virtual]`

Sets if Message Time Stamps are disabled for this Producer.

Parameters

value - boolean indicating enable / disable (true / false)

Implements **cms::MessageProducer** (p. 2195).

6.54.2.19 `virtual void activemq::core::ActiveMQProducer::setPriority (int priority) throw (cms::CMSExcption) [inline, virtual]`

Sets the Priority that this Producers sends messages at.

Parameters

priority int value for Priority level

Implements **cms::MessageProducer** (p. 2195).

6.54.2.20 `virtual void activemq::core::ActiveMQProducer::setSendTimeout (long long time) throw (cms::CMSExcption) [inline, virtual]`

Sets the Send Timeout that this Producers sends messages with.

Parameters

time The new default send timeout value in milliseconds.

6.54.2.21 `virtual void activemq::core::ActiveMQProducer::setTimeToLive (long long time) throw (cms::CMSExcption) [inline, virtual]`

Sets the Time to Live that this Producers sends messages with.

Parameters

time The new default time to live value in milliseconds.

Implements **cms::MessageProducer** (p. 2196).

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQProducer.h`

6.55 activemq::util::ActiveMQProperties Class Reference

Implementation of the CMSProperties interface that delegates to a **decaf::util::Properties** (p. 2494) object.

```
#include <src/main/activemq/util/ActiveMQProperties.h>
```

Inheritance diagram for activemq::util::ActiveMQProperties:

Public Member Functions

- virtual `~ActiveMQProperties ()`
- virtual `decaf::util::Properties & getProperties ()`
- virtual const `decaf::util::Properties & getProperties () const`
- virtual void `setProperties (decaf::util::Properties &props)`
- virtual bool `isEmpty () const`
Returns true if the properties object is empty.
- virtual const char * `getProperty (const std::string &name) const`
Looks up the value for the given property.
- virtual std::string `getProperty (const std::string &name, const std::string &defaultValue) const`
Looks up the value for the given property.
- virtual void `setProperty (const std::string &name, const std::string &value)`
Sets the value for a given property.
- virtual bool `hasProperty (const std::string &name) const`
Check to see if the Property exists in the set.
- virtual void `remove (const std::string &name)`
Removes the property with the given name.
- virtual std::vector< std::pair< std::string, std::string > > `toArray () const`
Method that serializes the contents of the property map to an array.
- virtual void `copy (const CMSProperties *source)`
Copies the contents of the given properties object to this one.
- virtual CMSProperties * `clone () const`
Clones this object.
- virtual void `clear ()`
Clears all properties from the map.
- virtual std::string `toString () const`
Formats the contents of the Properties Object into a string that can be logged, etc.

6.55.1 Detailed Description

Implementation of the CMSProperties interface that delegates to a **decaf::util::Properties** (p. 2494) object.

Since

2.0

6.55.2 Constructor & Destructor Documentation

6.55.2.1 `virtual activemq::util::ActiveMQProperties::~ActiveMQProperties ()`
[virtual]

6.55.3 Member Function Documentation

6.55.3.1 `virtual void activemq::util::ActiveMQProperties::clear ()` [inline,
virtual]

Clears all properties from the map.

Implements **cms::CMSProperties** (p. 966).

6.55.3.2 `virtual CMSProperties* activemq::util::ActiveMQProperties::clone ()`
`const` [virtual]

Clones this object.

Returns

a replica of this object.

Implements **cms::CMSProperties** (p. 966).

6.55.3.3 `virtual void activemq::util::ActiveMQProperties::copy (const`
`CMSProperties * source)` [virtual]

Copies the contents of the given properties object to this one.

Parameters

source The source properties object.

6.55.3.4 `virtual decaf::util::Properties& activemq::util::ActiveMQProperties::getProperties ()`
[inline, virtual]

6.55.3.5 `virtual const decaf::util::Properties& activemq::util::ActiveMQProperties::getProperties ()`
`const` [inline, virtual]

6.55.3.6 `virtual const char* activemq::util::ActiveMQProperties::getProperty (`
`const std::string & name) const` [inline, virtual]

Looks up the value for the given property.

Parameters

name The name of the property to be looked up.

Returns

the value of the property with the given name, if it exists. If it does not exist, returns NULL.

Implements `cms::CMSProperties` (p. 966).

6.55.3.7 `virtual std::string activemq::util::ActiveMQProperties::getProperty (`
`const std::string & name, const std::string & defaultValue) const`
[inline, virtual]

Looks up the value for the given property.

Parameters

name the name of the property to be looked up.

defaultValue The value to be returned if the given property does not exist.

Returns

The value of the property specified by *name*, if it exists, otherwise the *defaultValue*.

Implements `cms::CMSProperties` (p. 967).

6.55.3.8 `virtual bool activemq::util::ActiveMQProperties::hasProperty (const`
`std::string & name) const` [inline, virtual]

Check to see if the Property exists in the set.

Parameters

name - property name to check for in this properties set.

Returns

true if property exists, false otherwise.

Implements `cms::CMSProperties` (p. 967).

6.55.3.9 `virtual bool activemq::util::ActiveMQProperties::isEmpty () const`
[inline, virtual]

Returns true if the properties object is empty.

Returns

true if empty

Implements `cms::CMSProperties` (p. 967).

6.55.3.10 `virtual void activemq::util::ActiveMQProperties::remove (const`
`std::string & name)` [inline, virtual]

Removes the property with the given name.

Parameters

name the name of the property to remove.

Implements `cms::CMSProperties` (p. 967).

6.55.3.11 `virtual void activemq::util::ActiveMQProperties::setProperties (`
`decaf::util::Properties & props)` [inline, virtual]

6.55.3.12 `virtual void activemq::util::ActiveMQProperties::setProperty (const`
`std::string & name, const std::string & value)` [inline, virtual]

Sets the value for a given property.

If the property already exists, overwrites the value.

Parameters

name The name of the value to be written.

value The value to be written.

Implements `cms::CMSProperties` (p. 968).

6.55.3.13 `virtual std::vector< std::pair< std::string, std::string > >`
`activemq::util::ActiveMQProperties::toArray () const` [inline,
virtual]

Method that serializes the contents of the property map to an array.

Returns

list of pairs where the first is the name and the second is the value.

Implements `cms::CMSProperties` (p. 968).

6.55.3.14 virtual std::string activemq::util::ActiveMQProperties::toString () const [inline, virtual]

Formats the contents of the Properties Object into a string that can be logged, etc.

Returns

string value of this object.

Implements **cms::CMSProperties** (p. 968).

The documentation for this class was generated from the following file:

- src/main/activemq/util/**ActiveMQProperties.h**

6.56 activemq::commands::ActiveMQQueue Class Reference

```
#include <src/main/activemq/commands/ActiveMQQueue.h>
```

Inheritance diagram for activemq::commands::ActiveMQQueue:

Public Member Functions

- **ActiveMQQueue** ()
- **ActiveMQQueue** (const std::string &name)
- virtual ~**ActiveMQQueue** ()
- virtual unsigned char **getDataStructureType** () const
- virtual **ActiveMQQueue** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual const **cms::Destination** * **getCMSDestination** () const
- virtual **cms::Destination::DestinationType** **getDestinationType** () const
Retrieve the Destination Type for this Destination.
- virtual **cms::Destination** * **clone** () const
Creates a new instance of this destination type that is a copy of this one, and returns it.
- virtual void **copy** (const **cms::Destination** &source)

Copies the contents of the given Destination object to this one.

- virtual const **cms::CMSProperties** & **getCMSProperties** () const
Retrieve any properties that might be part of the destination that was specified.
- virtual std::string **getQueueName** () const throw (cms::CMSException)
Gets the name of this queue.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQQUEUE** = 100

6.56.1 Constructor & Destructor Documentation

- 6.56.1.1 **activemq::commands::ActiveMQQueue::ActiveMQQueue** ()
- 6.56.1.2 **activemq::commands::ActiveMQQueue::ActiveMQQueue** (const std::string & *name*)
- 6.56.1.3 **virtual activemq::commands::ActiveMQQueue::~~ActiveMQQueue** ()
[inline, virtual]

6.56.2 Member Function Documentation

- 6.56.2.1 **virtual cms::Destination* activemq::commands::ActiveMQQueue::clone** () const [inline, virtual]

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns

cloned copy of this object

Implements **cms::Destination** (p.1389).

- 6.56.2.2 **virtual ActiveMQQueue* activemq::commands::ActiveMQQueue::cloneDataStructure** () const [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

- 6.56.2.3 **virtual void activemq::commands::ActiveMQQueue::copy** (const cms::Destination & *source*) [inline, virtual]

Copies the contents of the given Destination object to this one.

Parameters

source The source Destination object.

Implements **cms::Destination** (p.1389).

6.56.2.4 virtual void activemq::commands::ActiveMQQueue::copyDataStructure (const DataStructure * *src*) [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

6.56.2.5 virtual bool activemq::commands::ActiveMQQueue::equals (const DataStructure * *value*) const [virtual]

Compares the **DataStructure** (p.1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

6.56.2.6 virtual const cms::Destination* activemq::commands::ActiveMQQueue::getCMSDestination () const [inline, virtual]

Returns

the **cms::Destination** (p.1387) interface pointer that the objects that derive from this class implement.

6.56.2.7 virtual const cms::CMSProperties& activemq::commands::ActiveMQQueue::getCMSProperties () const [inline, virtual]

Retrieve any properties that might be part of the destination that was specified.

This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns

const reference to a properties object.

Implements **cms::Destination** (p.1389).

6.56.2.8 `virtual unsigned char activemq::commands::ActiveMQQueue::getDataStructureType () const`
[virtual]

6.56.2.9 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQQueue::getDestinationType () const`
[inline, virtual]

Retrieve the Destination Type for this Destination.

Returns

The Destination Type

Implements **cms::Destination** (p. 1389).

6.56.2.10 `virtual std::string activemq::commands::ActiveMQQueue::getQueueName () const throw (cms::CMSException)` [inline, virtual]

Gets the name of this queue.

Returns

The queue name.

Implements **cms::Queue** (p. 2511).

6.56.2.11 `virtual std::string activemq::commands::ActiveMQQueue::toString () const` [virtual]

Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

6.56.3 Field Documentation

6.56.3.1 `const unsigned char activemq::commands::ActiveMQQueue::ID _ - ACTIVEMQQUEUE = 100` [static]

The documentation for this class was generated from the following file:

Write a object instance to data output stream.

6.57.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 382). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.57.2 Constructor & Destructor Documentation

6.57.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller () [inline]`

6.57.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller () [inline, virtual]`

6.57.3 Member Function Documentation

6.57.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.57.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.57.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 251).

6.57.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 252).

6.57.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 252).

6.57.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 253).

```
6.57.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 253).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQQueueMarshaller.h`

6.58 `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQQueueMarshaller` (p. 386).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQQueueMarshaller.h>
```

Write a object instance to data output stream.

6.58.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 386). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.58.2 Constructor & Destructor Documentation

6.58.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller () [inline]`

6.58.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller () [inline, virtual]`

6.58.3 Member Function Documentation

6.58.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.58.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.58.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 255).

6.58.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 256).

6.58.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 256).

6.58.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 257).

```
6.58.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 257).

6.59.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller () [inline]`

6.59.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller () [inline, virtual]`

6.59.3 Member Function Documentation

6.59.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.59.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.59.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 259).

6.59.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 259).

6.59.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 260).

6.59.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 260).

```
6.59.3.7 virtual void ac-
        tivemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::tightUnmarshal
        ( OpenWireFormat * wireFormat, commands::DataStructure
        * dataStructure, decaf::io::DataInputStream * dataIn,
        utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 261).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQQueueMarshaller.h`

6.60 `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller` Class Reference

- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshall an object instance from the data input stream.
- virtual void **looseMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)
Write a object instance to data output stream.

6.60.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 394). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.60.2 Constructor & Destructor Documentation

6.60.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller () [inline]`

6.60.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller () [inline, virtual]`

6.60.3 Member Function Documentation

6.60.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.60.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.60.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 263).

6.60.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 263).

6.60.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 264).

6.60.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 264).

```
6.60.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 265).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v5/ActiveMQQueueMarshaller.h`

6.61 `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQQueueMarshaller` (p. 398).

```
#include <src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQQueueMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller`:

Public Member Functions

6.61.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 398). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.61.2 Constructor & Destructor Documentation

6.61.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller () [inline]`

6.61.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller () [inline, virtual]`

6.61.3 Member Function Documentation

6.61.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.61.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.61.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 267).

6.61.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 267).

6.61.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 268).

6.61.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 268).

```
6.61.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 269).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQQueueMarshaller.h`

6.62 `activemq::core::ActiveMQSession` Class Reference

```
#include <src/main/activemq/core/ActiveMQSession.h>
```

Inheritance diagram for `activemq::core::ActiveMQSession`:

Public Member Functions

- **ActiveMQSession** (const **Pointer**< **commands::SessionInfo** > &sessionInfo, **cms::Session::AcknowledgeMode** ackMode, const **decaf::util::Properties** &properties, **ActiveMQConnection** *connection)
- virtual **~ActiveMQSession** ()
- void **redispatch** (**MessageDispatchChannel** &unconsumedMessages)
Redispatches the given set of unconsumed messages to the consumers.
- void **start** ()
Stops asynchronous message delivery.
- void **stop** ()
Starts asynchronous message delivery.
- bool **isStarted** () const
Indicates whether or not the session is currently in the started state.
- bool **isAutoAcknowledge** () const
- bool **isDupsOkAcknowledge** () const
- bool **isClientAcknowledge** () const
- bool **isIndividualAcknowledge** () const
- void **fire** (const **exceptions::ActiveMQException** &ex)
Fires the given exception to the exception listener of the connection.
- virtual void **dispatch** (const **Pointer**< **MessageDispatch** > &message)
Dispatches a message to a particular consumer.
- virtual void **close** () throw (**cms::CMSEException**)
Closes this session as well as any active child consumers or producers.
- virtual void **commit** () throw (**cms::CMSEException**)
Commits all messages done in this transaction and releases any locks currently held.
- virtual void **rollback** () throw (**cms::CMSEException**)
Rollsback all messages done in this transaction and releases any locks currently held.
- virtual void **recover** () throw (**cms::CMSEException**)
Stops message delivery in this session, and restarts message delivery with the oldest unacknowledged message.
- virtual **cms::MessageConsumer** * **createConsumer** (const **cms::Destination** *destination) throw (**cms::CMSEException**)
Creates a MessageConsumer for the specified destination.
- virtual **cms::MessageConsumer** * **createConsumer** (const **cms::Destination** *destination, const std::string &selector) throw (**cms::CMSEException**)
Creates a MessageConsumer for the specified destination, using a message selector.

- virtual **cms::MessageConsumer** * **createConsumer** (const **cms::Destination** *destination, const std::string &selector, bool noLocal) throw (cms::CMSEException)
Creates a MessageConsumer for the specified destination, using a message selector.
- virtual **cms::MessageConsumer** * **createDurableConsumer** (const **cms::Topic** *destination, const std::string &name, const std::string &selector, bool noLocal=false) throw (cms::CMSEException)
Creates a durable subscriber to the specified topic, using a message selector.
- virtual **cms::MessageProducer** * **createProducer** (const **cms::Destination** *destination) throw (cms::CMSEException)
Creates a MessageProducer to send messages to the specified destination.
- virtual **cms::QueueBrowser** * **createBrowser** (const **cms::Queue** *queue) throw (cms::CMSEException)
Creates a new QueueBrowser to peek at Messages on the given Queue.
- virtual **cms::QueueBrowser** * **createBrowser** (const **cms::Queue** *queue, const std::string &selector) throw (cms::CMSEException)
Creates a new QueueBrowser to peek at Messages on the given Queue.
- virtual **cms::Queue** * **createQueue** (const std::string &queueName) throw (cms::CMSEException)
Creates a queue identity given a Queue name.
- virtual **cms::Topic** * **createTopic** (const std::string &topicName) throw (cms::CMSEException)
Creates a topic identity given a Queue name.
- virtual **cms::TemporaryQueue** * **createTemporaryQueue** () throw (cms::CMSEException)
Creates a TemporaryQueue object.
- virtual **cms::TemporaryTopic** * **createTemporaryTopic** () throw (cms::CMSEException)
Creates a TemporaryTopic object.
- virtual **cms::Message** * **createMessage** () throw (cms::CMSEException)
Creates a new Message.
- virtual **cms::BytesMessage** * **createBytesMessage** () throw (cms::CMSEException)
Creates a BytesMessage.
- virtual **cms::BytesMessage** * **createBytesMessage** (const unsigned char *bytes, std::size_t bytesSize) throw (cms::CMSEException)
Creates a BytesMessage and sets the pay-load to the passed value.
- virtual **cms::StreamMessage** * **createStreamMessage** () throw (cms::CMSEException)
Creates a new StreamMessage.

- virtual **cms::TextMessage** * **createTextMessage** () throw (cms::CMSEException)
Creates a new TextMessage.
- virtual **cms::TextMessage** * **createTextMessage** (const std::string &text) throw (cms::CMSEException)
Creates a new TextMessage and set the text to the value given.
- virtual **cms::MapMessage** * **createMapMessage** () throw (cms::CMSEException)
Creates a new MapMessage.
- virtual **cms::Session::AcknowledgeMode** **getAcknowledgeMode** () const throw (cms::CMSEException)
Returns the acknowledgment mode of the session.
- virtual bool **isTransacted** () const throw (cms::CMSEException)
Gets if the Sessions is a Transacted Session.
- virtual void **unsubscribe** (const std::string &name) throw (cms::CMSEException)
Unsubscribes a durable subscription that has been created by a client.
- void **send** (cms::Message *message, **ActiveMQProducer** *producer, **util::Usage** *usage) throw (cms::CMSEException)
Sends a message from the Producer specified using this session's connection the message will be sent using the best available means depending on the configuration of the connection.
- **cms::ExceptionListener** * **getExceptionListener** ()
This method gets any registered exception listener of this sessions connection and returns it.
- const **commands::SessionInfo** & **getSessionInfo** () const
Gets the Session Information object for this session, if the session is closed than this method throws an exception.
- const **commands::SessionId** & **getSessionId** () const
Gets the Session Id object for this session, if the session is closed than this method throws an exception.
- **ActiveMQConnection** * **getConnection** () const
*Gets the **ActiveMQConnection** (p. 202) that is associated with this session.*
- long long **getLastDeliveredSequenceId** () const
Gets the currently set Last Delivered Sequence Id.
- void **setLastDeliveredSequenceId** (long long value)
Sets the value of the Last Delivered Sequence Id.
- void **oneway** (Pointer< **commands::Command** > command) throw (activemq::exceptions::ActiveMQException)
Sends a oneway message.

- void **syncRequest** (**Pointer**< **commands::Command** > command, unsigned int timeout=0) throw (**activemq::exceptions::ActiveMQException**)
Sends a synchronous request and returns the response from the broker.
- void **disposeOf** (**decaf::lang::Pointer**< **commands::ConsumerId** > id, long long last-DeliveredSequenceId) throw (**activemq::exceptions::ActiveMQException**)
Dispose of a Consumer from this session.
- void **disposeOf** (**decaf::lang::Pointer**< **commands::ProducerId** > id) throw (**activemq::exceptions::ActiveMQException**)
Dispose of a Producer from this session.
- void **doStartTransaction** () throw (**exceptions::ActiveMQException**)
Starts if not already start a Transaction for this Session.
- void **acknowledge** ()
Request that the Session inform all its consumers to Acknowledge all Message's that have been received so far.
- void **deliverAcks** ()
Request that this Session inform all of its consumers to deliver their pending acks.
- void **clearMessagesInProgress** ()
Request that this Session inform all of its consumers to clear all messages that are currently in progress.
- void **wakeup** ()
Causes the Session to wakeup its executor and ensure all messages are dispatched.

6.62.1 Constructor & Destructor Documentation

- 6.62.1.1** **activemq::core::ActiveMQSession::ActiveMQSession** (const **Pointer**< **commands::SessionInfo** > & *sessionInfo*, **cms::Session::AcknowledgeMode** *ackMode*, const **decaf::util::Properties** & *properties*, **ActiveMQConnection** * *connection*)
- 6.62.1.2** **virtual activemq::core::ActiveMQSession::~~ActiveMQSession** ()
 [virtual]

6.62.2 Member Function Documentation

- 6.62.2.1** void **activemq::core::ActiveMQSession::acknowledge** ()

Request that the Session inform all its consumers to Acknowledge all Message's that have been received so far.

6.62.2.2 void activemq::core::ActiveMQSession::clearMessagesInProgress ()

Request that this Session inform all of its consumers to clear all messages that are currently in progress.

6.62.2.3 virtual void activemq::core::ActiveMQSession::close () throw (cms::CMSException) [virtual]

Closes this session as well as any active child consumers or producers.

Exceptions

CMSException

6.62.2.4 virtual void activemq::core::ActiveMQSession::commit () throw (cms::CMSException) [virtual]

Commits all messages done in this transaction and releases any locks currently held.

Exceptions

CMSException

6.62.2.5 virtual cms::QueueBrowser* activemq::core::ActiveMQSession::createBrowser (const cms::Queue * queue) throw (cms::CMSException) [virtual]

Creates a new QueueBrowser to peek at Messages on the given Queue.

Parameters

queue the Queue to browse

Returns

New QueueBrowser that is owned by the caller.

Exceptions

CMSException - If an internal error occurs.

InvalidDestinationException - if the destination given is invalid.

6.62.2.6 virtual cms::QueueBrowser* activemq::core::ActiveMQSession::createBrowser (const cms::Queue * queue, const std::string & selector) throw (cms::CMSException) [virtual]

Creates a new QueueBrowser to peek at Messages on the given Queue.

Parameters

queue the Queue to browse

selector the Message selector to filter which messages are browsed.

Returns

New QueueBrowser that is owned by the caller.

Exceptions

CMSEException - If an internal error occurs.

InvalidDestinationException - if the destination given is invalid.

```
6.62.2.7 virtual cms::BytesMessage* ac-
        tivemq::core::ActiveMQSession::createBytesMessage (    )
        throw ( cms::CMSEException ) [virtual]
```

Creates a BytesMessage.

Returns

a newly created BytesMessage.

Exceptions

CMSEException

```
6.62.2.8 virtual cms::BytesMessage* ac-
        tivemq::core::ActiveMQSession::createBytesMessage (
        const unsigned char * bytes, std::size_t bytesSize ) throw (
        cms::CMSEException ) [virtual]
```

Creates a BytesMessage and sets the pay-load to the passed value.

Parameters

bytes - an array of bytes to set in the message

bytesSize - the size of the bytes array, or number of bytes to use

Returns

a newly created BytesMessage.

Exceptions

CMSEException

```
6.62.2.9 virtual cms::MessageConsumer* ac-
        tivemq::core::ActiveMQSession::createConsumer ( const
        cms::Destination * destination, const std::string & selector, bool
        noLocal ) throw ( cms::CMSEException ) [virtual]
```

Creates a MessageConsumer for the specified destination, using a message selector.

Parameters

- destination* - The Destination that this consumer receiving messages for.
- selector* - The Message Selector string to use for this destination
- noLocal* - if true, and the destination is a topic, inhibits the delivery of messages published by its own connection. The behavior for NoLocal is not specified if the destination is a queue.

Exceptions

CMSException

6.62.2.10 `virtual cms::MessageConsumer* activemq::core::ActiveMQSession::createConsumer (const cms::Destination * destination, const std::string & selector) throw (cms::CMSException)` [virtual]

Creates a MessageConsumer for the specified destination, using a message selector.

Parameters

- destination* - The Destination that this consumer receiving messages for.
- selector* - The Message Selector string to use for this destination

Exceptions

CMSException

6.62.2.11 `virtual cms::MessageConsumer* activemq::core::ActiveMQSession::createConsumer (const cms::Destination * destination) throw (cms::CMSException)` [virtual]

Creates a MessageConsumer for the specified destination.

Parameters

- destination* - The Destination that this consumer receiving messages for.

Exceptions

CMSException

6.62.2.12 `virtual cms::MessageConsumer* activemq::core::ActiveMQSession::createDurableConsumer (const cms::Topic * destination, const std::string & name, const std::string & selector, bool noLocal = false) throw (cms::CMSException)` [virtual]

Creates a durable subscriber to the specified topic, using a message selector.

Parameters

destination - the topic to subscribe to

name - The name used to identify the subscription

selector - only messages matching the selector are received

noLocal - if true, and the destination is a topic, inhibits the delivery of messages published by its own connection. The behavior for NoLocal is not specified if the destination is a queue.

Exceptions

CMSEException

6.62.2.13 `virtual cms::MapMessage* activemq::core::ActiveMQSession::createMapMessage ()
throw (cms::CMSEException) [virtual]`

Creates a new MapMessage.

Returns

a newly created MapMessage.

Exceptions

CMSEException

6.62.2.14 `virtual cms::Message* activemq::core::ActiveMQSession::createMessage ()
throw (cms::CMSEException) [virtual]`

Creates a new Message.

Exceptions

CMSEException

6.62.2.15 `virtual cms::MessageProducer* activemq::core::ActiveMQSession::createProducer (const
cms::Destination * destination) throw (cms::CMSEException)
[virtual]`

Creates a MessageProducer to send messages to the specified destination.

Parameters

destination - the Destination to publish on

Exceptions

CMSEException

6.62.2.16 virtual cms::Queue* activemq::core::ActiveMQSession::createQueue
(const std::string & *queueName*) throw (cms::CMSException)
[virtual]

Creates a queue identity given a Queue name.

Parameters

queueName - the name of the new Queue

Exceptions

CMSException

6.62.2.17 virtual cms::StreamMessage* activemq::core::ActiveMQSession::createStreamMessage () throw (cms::CMSException) [virtual]

Creates a new StreamMessage.

Returns

a newly created StreamMessage.

Exceptions

CMSException

6.62.2.18 virtual cms::TemporaryQueue* activemq::core::ActiveMQSession::createTemporaryQueue () throw (cms::CMSException) [virtual]

Creates a TemporaryQueue object.

Exceptions

CMSException

6.62.2.19 virtual cms::TemporaryTopic* activemq::core::ActiveMQSession::createTemporaryTopic () throw (cms::CMSException) [virtual]

Creates a TemporaryTopic object.

Exceptions

CMSException

6.62.2.20 `virtual cms::TextMessage* activemq::core::ActiveMQSession::createTextMessage ()
throw (cms::CMSException) [virtual]`

Creates a new TextMessage.

Returns

a newly created TextMessage.

Exceptions

CMSException

6.62.2.21 `virtual cms::TextMessage* activemq::core::ActiveMQSession::createTextMessage (const std::string & text) throw (cms::CMSException) [virtual]`

Creates a new TextMessage and set the text to the value given.

Parameters

text - The initial text for the message

Returns

a newly created TextMessage with the given Text set in the Message body.

Exceptions

CMSException

6.62.2.22 `virtual cms::Topic* activemq::core::ActiveMQSession::createTopic (const std::string & topicName) throw (cms::CMSException) [virtual]`

Creates a topic identity given a Queue name.

Parameters

topicName - the name of the new Topic

Exceptions

CMSException

6.62.2.23 `void activemq::core::ActiveMQSession::deliverAcks ()`

Request that this Session inform all of its consumers to deliver their pending acks.

6.62.2.24 `virtual void activemq::core::ActiveMQSession::dispatch (const Pointer< MessageDispatch > & message) [virtual]`

Dispatches a message to a particular consumer.

Parameters

message - the message to be dispatched

Implements `activemq::core::Dispatcher` (p. 1441).

6.62.2.25 `void activemq::core::ActiveMQSession::disposeOf (decaf::lang::Pointer< commands::ConsumerId > id, long long lastDeliveredSequenceId) throw (activemq::exceptions::ActiveMQException)`

Dispose of a Consumer from this session.

Removes it from the Connection and clean up any resources associated with it.

Parameters

id The Id of the Consumer to dispose.

lastDeliveredSequenceId The Broker Sequence Id of the last message the Consumer delivered.

Exceptions

ActiveMQException if an internal error occurs.

6.62.2.26 `void activemq::core::ActiveMQSession::disposeOf (decaf::lang::Pointer< commands::ProducerId > id) throw (activemq::exceptions::ActiveMQException)`

Dispose of a Producer from this session.

Removes it from the Connection and clean up any resources associated with it.

Parameters

id - the Id of the Producer to dispose.

Exceptions

ActiveMQException if an internal error occurs.

6.62.2.27 `void activemq::core::ActiveMQSession::doStartTransaction () throw (exceptions::ActiveMQException)`

Starts if not already start a Transaction for this Session.

If the session is not a Transacted Session then an exception is thrown. If a transaction is already in progress then this method has no effect.

Exceptions

ActiveMQException if this is not a Transacted Session.

6.62.2.28 `void activemq::core::ActiveMQSession::fire (const exceptions::ActiveMQException & ex)`

Fires the given exception to the exception listener of the connection.

6.62.2.29 `virtual cms::Session::AcknowledgeMode activemq::core::ActiveMQSession::getAcknowledgeMode () const throw (cms::CMSException) [virtual]`

Returns the acknowledgment mode of the session.

Returns

the Sessions Acknowledge Mode

6.62.2.30 `ActiveMQConnection* activemq::core::ActiveMQSession::getConnection () const [inline]`

Gets the **ActiveMQConnection** (p. 202) that is associated with this session.

6.62.2.31 `cms::ExceptionListener* activemq::core::ActiveMQSession::getExceptionListener ()`

This method gets any registered exception listener of this sessions connection and returns it.

Mainly intended for use by the objects that this session creates so that they can notify the client of exceptions that occur in the context of another thread.

Returns

cms::ExceptionListener (p. 1483) pointer or NULL

6.62.2.32 `long long activemq::core::ActiveMQSession::getLastDeliveredSequenceId () const [inline]`

Gets the currently set Last Delivered Sequence Id.

Returns

long long containing the sequence id of the last delivered Message.

6.62.2.33 `const commands::SessionId& activemq::core::ActiveMQSession::getSessionId () const [inline]`

Gets the Session Id object for this session, if the session is closed than this method throws an exception.

Returns

SessionId Reference

6.62.2.34 `const commands::SessionInfo& activemq::core::ActiveMQSession::getSessionInfo () const`
[inline]

Gets the Session Information object for this session, if the session is closed than this method throws an exception.

Returns

SessionInfo Reference

6.62.2.35 `bool activemq::core::ActiveMQSession::isAutoAcknowledge () const`
[inline]

6.62.2.36 `bool activemq::core::ActiveMQSession::isClientAcknowledge () const`
[inline]

6.62.2.37 `bool activemq::core::ActiveMQSession::isDupsOkAcknowledge () const`
[inline]

6.62.2.38 `bool activemq::core::ActiveMQSession::isIndividualAcknowledge () const` [inline]

6.62.2.39 `bool activemq::core::ActiveMQSession::isStarted () const`

Indicates whether or not the session is currently in the started state.

6.62.2.40 `virtual bool activemq::core::ActiveMQSession::isTransacted () const`
`throw (cms::CMSException)` [virtual]

Gets if the Sessions is a Transacted Session.

Returns

transacted true - false.

6.62.2.41 `void activemq::core::ActiveMQSession::oneway (`
`Pointer< commands::Command > command) throw (`
`activemq::exceptions::ActiveMQException)`

Sends a oneway message.

Parameters

command The message to send.

Exceptions

ActiveMQException if not currently connected, or if the operation fails for any reason.

6.62.2.42 `virtual void activemq::core::ActiveMQSession::recover () throw (cms::CMSException) [virtual]`

Stops message delivery in this session, and restarts message delivery with the oldest unacknowledged message.

All consumers deliver messages in a serial order. Acknowledging a received message automatically acknowledges all messages that have been delivered to the client.

Restarting a session causes it to take the following actions:

- Stop message delivery
- Mark all messages that might have been delivered but not acknowledged as "redelivered"
- Restart the delivery sequence including all unacknowledged messages that had been previously delivered. Redelivered messages do not have to be delivered in exactly their original delivery order.

Exceptions

CMSException - if the CMS provider fails to stop and restart message delivery due to some internal error.

IllegalStateException - if the method is called by a transacted session.

6.62.2.43 `void activemq::core::ActiveMQSession::redispatch (MessageDispatchChannel & unconsumedMessages)`

Redispatches the given set of unconsumed messages to the consumers.

Parameters

unconsumedMessages - unconsumed messages to be redelivered.

6.62.2.44 `virtual void activemq::core::ActiveMQSession::rollback () throw (cms::CMSException) [virtual]`

Rollsback all messages done in this transaction and releases any locks currently held.

Exceptions

CMSException

6.62.2.45 `void activemq::core::ActiveMQSession::send (cms::Message * message, ActiveMQProducer * producer, util::Usage * usage) throw (cms::CMSException)`

Sends a message from the Producer specified using this session's connection the message will be sent using the best available means depending on the configuration of the connection.

Asynchronous sends will be chosen if at all possible.

Parameters

message The message to send to the broker.

producer The sending Producer

usage Pointer to a Usage tracker which if set will be increased by the size of the given message.

Exceptions

CMSException

6.62.2.46 `void activemq::core::ActiveMQSession::setLastDeliveredSequenceId (long long value) [inline]`

Sets the value of the Last Delivered Sequence Id.

Parameters

value The new value to assign to the Last Delivered Sequence Id property.

6.62.2.47 `void activemq::core::ActiveMQSession::start ()`

Stops asynchronous message delivery.

6.62.2.48 `void activemq::core::ActiveMQSession::stop ()`

Starts asynchronous message delivery.

6.62.2.49 `void activemq::core::ActiveMQSession::syncRequest (Pointer< commands::Command > command, unsigned int timeout = 0) throw (activemq::exceptions::ActiveMQException)`

Sends a synchronous request and returns the response from the broker.

Converts any error responses into an exception.

Parameters

command The request command.

timeout The time to wait for a response, default is zero or infinite.

Exceptions

ActiveMQException thrown if an error response was received from the broker, or if any other error occurred.

6.62.2.50 `virtual void activemq::core::ActiveMQSession::unsubscribe (const std::string & name) throw (cms::CMSException) [virtual]`

Unsubscribes a durable subscription that has been created by a client.

This method deletes the state being maintained on behalf of the subscriber by its provider. It is erroneous for a client to delete a durable subscription while there is an active MessageConsumer or Subscriber for the subscription, or while a consumed message is part of a pending transaction or has not been acknowledged in the session.

Parameters

name the name used to identify this subscription

Exceptions

CMSException

6.62.2.51 `void activemq::core::ActiveMQSession::wakeup ()`

Causes the Session to wakeup its executor and ensure all messages are dispatched.

6.62.3 Friends And Related Function Documentation

6.62.3.1 `friend class ActiveMQSessionExecutor [friend]`

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQSession.h`

6.63 activemq::core::ActiveMQSessionExecutor Class Reference

Delegate dispatcher for a single session.

```
#include <src/main/activemq/core/ActiveMQSessionExecutor.h>
```

Inheritance diagram for `activemq::core::ActiveMQSessionExecutor`:

Public Member Functions

- `ActiveMQSessionExecutor (ActiveMQSession *session)`
Creates an un-started executor for the given session.
- `virtual ~ActiveMQSessionExecutor ()`
Calls `stop()` (p. 421) then `clear()` (p. 420).
- `virtual void execute (const Pointer< MessageDispatch > &data)`
Executes the dispatch.

- virtual void **executeFirst** (const **Pointer**< **MessageDispatch** > &data)
Executes the dispatch.
- virtual void **clearMessagesInProgress** ()
Removes all messages in the Dispatch Channel so that non are delivered.
- virtual bool **hasUnconsumedMessages** () const
- virtual void **wakeup** ()
wakeup this executor and dispatch any pending messages.
- virtual void **start** ()
Starts the dispatching.
- virtual void **stop** ()
Stops dispatching.
- virtual void **close** ()
Terminates the dispatching thread.
- virtual bool **isRunning** () const
- virtual bool **isEmpty** ()
- virtual void **clear** ()
Removes all queued messages and destroys them.
- virtual bool **iterate** ()
*Iterates on the **MessageDispatchChannel** (p. 2088) sending all pending messages to the Consumers they are destined for.*
- std::vector< **Pointer**< **MessageDispatch** > > **getUnconsumedMessages** ()

6.63.1 Detailed Description

Delegate dispatcher for a single session. Contains a thread to provide for asynchronous dispatching.

6.63.2 Constructor & Destructor Documentation

6.63.2.1 **activemq::core::ActiveMQSessionExecutor::ActiveMQSessionExecutor** (**ActiveMQSession** * *session*)

Creates an un-started executor for the given session.

6.63.2.2 **virtual** **activemq::core::ActiveMQSessionExecutor::~ActiveMQSessionExecutor** () [virtual]

Calls **stop()** (p. 421) then **clear()** (p. 420).

6.63.3 Member Function Documentation

6.63.3.1 `virtual void activemq::core::ActiveMQSessionExecutor::clear ()`
[inline, virtual]

Removes all queued messages and destroys them.

6.63.3.2 `virtual void activemq::core::ActiveMQSessionExecutor::clearMessagesInProgress ()`
[inline, virtual]

Removes all messages in the Dispatch Channel so that non are delivered.

6.63.3.3 `virtual void activemq::core::ActiveMQSessionExecutor::close ()`
[inline, virtual]

Terminates the dispatching thread.

Once this is called, the executor is no longer usable.

6.63.3.4 `virtual void activemq::core::ActiveMQSessionExecutor::execute (const Pointer< MessageDispatch > & data)` [virtual]

Executes the dispatch.

Adds the given data to the end of the queue.

Parameters

data - the data to be dispatched.

6.63.3.5 `virtual void activemq::core::ActiveMQSessionExecutor::executeFirst (const Pointer< MessageDispatch > & data)` [virtual]

Executes the dispatch.

Adds the given data to the beginning of the queue.

Parameters

data - the data to be dispatched.

6.63.3.6 `std::vector< Pointer<MessageDispatch> > activemq::core::ActiveMQSessionExecutor::getUnconsumedMessages ()`
[inline]

Returns

a vector containing all the unconsumed messages, this clears the Message Dispatch Channel when called.

6.63.3.7 `virtual bool activemq::core::ActiveMQSessionExecutor::hasUnconsumedMessages ()`
`const [inline, virtual]`

Returns

true if there are any pending messages in the dispatch channel.

6.63.3.8 `virtual bool activemq::core::ActiveMQSessionExecutor::isEmpty ()`
`[inline, virtual]`

Returns

true if there are no messages in the Dispatch Channel.

6.63.3.9 `virtual bool activemq::core::ActiveMQSessionExecutor::isRunning ()`
`const [inline, virtual]`

Returns

true indicates if the executor is started

6.63.3.10 `virtual bool activemq::core::ActiveMQSessionExecutor::iterate ()`
`[virtual]`

Iterates on the **MessageDispatchChannel** (p. 2088) sending all pending messages to the Consumers they are destined for.

Returns

false if there are no more messages to dispatch.

Implements **activemq::threads::Task** (p. 2956).

6.63.3.11 `virtual void activemq::core::ActiveMQSessionExecutor::start ()`
`[virtual]`

Starts the dispatching.

6.63.3.12 `virtual void activemq::core::ActiveMQSessionExecutor::stop ()`
`[virtual]`

Stops dispatching.

6.63.3.13 `virtual void activemq::core::ActiveMQSessionExecutor::wakeup ()`
`[virtual]`

wakeup this executer and dispatch any pending messages.

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQSessionExecutor.h`

6.64 activemq::commands::ActiveMQStreamMessage Class Reference

```
#include <src/main/activemq/commands/ActiveMQStreamMessage.h>
```

Inheritance diagram for activemq::commands::ActiveMQStreamMessage:

Public Member Functions

- **ActiveMQStreamMessage** ()
- virtual **~ActiveMQStreamMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual **ActiveMQStreamMessage * cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual void **onSend** ()
Store the Data that was written to the stream before a send.
- virtual **cms::StreamMessage * clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual void **clearBody** () throw (cms::CMSException)
Clears out the body of the message.
- virtual void **reset** () throw (cms::CMSException)
Puts the message body in read-only mode and repositions the stream of bytes to the beginning.
- virtual bool **readBoolean** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException)
Reads a Boolean from the Stream message stream.
- virtual void **writeBoolean** (bool value) throw (cms::MessageNotWriteableException, cms::CMSException)
Writes a boolean to the Stream message stream as a 1-byte value.

- virtual unsigned char **readByte** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Byte from the Stream message stream.
- virtual void **writeByte** (unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte to the Stream message stream as a 1-byte value.
- virtual std::size_t **readBytes** (std::vector< unsigned char > &value) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a byte array from the Stream message stream.
- virtual void **writeBytes** (const std::vector< unsigned char > &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte array to the Stream message stream using the vector size as the number of bytes to write.
- virtual std::size_t **readBytes** (unsigned char *buffer, std::size_t length) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a portion of the Stream message stream.
- virtual void **writeBytes** (const unsigned char *value, std::size_t offset, std::size_t length) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a portion of a byte array to the Stream message stream.
- virtual char **readChar** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Char from the Stream message stream.
- virtual void **writeChar** (char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a char to the Stream message stream as a 1-byte value.
- virtual float **readFloat** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 32 bit float from the Stream message stream.
- virtual void **writeFloat** (float value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a float to the Stream message stream as a 4 byte value.
- virtual double **readDouble** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 64 bit double from the Stream message stream.

- virtual void **writeDouble** (double value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a double to the Stream message stream as a 8 byte value.
- virtual short **readShort** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 16 bit signed short from the Stream message stream.
- virtual void **writeShort** (short value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a signed short to the Stream message stream as a 2 byte value.
- virtual unsigned short **readUnsignedShort** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 16 bit unsigned short from the Stream message stream.
- virtual void **writeUnsignedShort** (unsigned short value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a unsigned short to the Stream message stream as a 2 byte value.
- virtual int **readInt** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 32 bit signed integer from the Stream message stream.
- virtual void **writeInt** (int value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a signed int to the Stream message stream as a 4 byte value.
- virtual long long **readLong** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 64 bit long from the Stream message stream.
- virtual void **writeLong** (long long value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a long long to the Stream message stream as a 8 byte value.
- virtual std::string **readString** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads an ASCII String from the Stream message stream.
- virtual void **writeString** (const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes an ASCII String to the Stream message stream.

Static Public Attributes

- static const unsigned char `ID_ACTIVEMQSTREAMMESSAGE` = 27

6.64.1 Constructor & Destructor Documentation

6.64.1.1 `activemq::commands::ActiveMQStreamMessage::ActiveMQStreamMessage ()`

6.64.1.2 `virtual activemq::commands::ActiveMQStreamMessage::~~ActiveMQStreamMessage () [virtual]`

6.64.2 Member Function Documentation

6.64.2.1 `virtual void activemq::commands::ActiveMQStreamMessage::clearBody () throw (cms::CMSException) [virtual]`

Clears out the body of the message.

This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::StreamMessage >` (p. 331).

6.64.2.2 `virtual cms::StreamMessage* activemq::commands::ActiveMQStreamMessage::clone () const [inline, virtual]`

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns

new copy of this message

6.64.2.3 `virtual ActiveMQStreamMessage* activemq::commands::ActiveMQStreamMessage::cloneDataStructure () const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2023).

6.64.2.4 `virtual void activemq::commands::ActiveMQStreamMessage::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2023).

6.64.2.5 `virtual bool activemq::commands::ActiveMQStreamMessage::equals (const DataStructure * value) const` [virtual]

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::StreamMessage >` (p. 331).

6.64.2.6 `virtual unsigned char activemq::commands::ActiveMQStreamMessage::getDataStructureType () const` [virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns

new `DataStructure` (p. 1372) type copy.

Reimplemented from `activemq::commands::Message` (p. 2025).

6.64.2.7 `virtual void activemq::commands::ActiveMQStreamMessage::onSend ()` [virtual]

Store the Data that was written to the stream before a send.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::StreamMessage >` (p. 338).

6.64.2.8 `virtual bool activemq::commands::ActiveMQStreamMessage::readBoolean () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)` [virtual]

Reads a Boolean from the Stream message stream.

Returns

boolean value from stream

Exceptions

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.9 virtual unsigned char activemq::commands::ActiveMQStreamMessage::readByte () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a Byte from the Stream message stream.

Returns

unsigned char value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.10 virtual std::size_t activemq::commands::ActiveMQStreamMessage::readBytes (unsigned char * *buffer*, std::size_t *length*) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a portion of the Stream message stream.

If the length of array value is less than the number of bytes remaining to be read from the stream, the array should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of array value, the bytes should be read into the array. The return value of the total number of bytes read will be less than the length of the array, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

If length is negative, or length is greater than the length of the array value, then an CMSException is thrown. No bytes will be read from the stream for this exception case.

Parameters

buffer the buffer into which the data is read

length the number of bytes to read; must be less than or equal to value.length

Returns

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.11 `virtual std::size_t activemq::commands::ActiveMQStreamMessage::readBytes (std::vector< unsigned char > & value) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a byte array from the Stream message stream.

If the length of vector value is less than the number of bytes remaining to be read from the stream, the vector should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of vector value, the bytes should be read into the vector. The return value of the total number of bytes read will be less than the length of the vector, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

Parameters

value buffer to place data in

Returns

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.12 `virtual char activemq::commands::ActiveMQStreamMessage::readChar () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a Char from the Stream message stream.

Returns

char value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.13 virtual double activemq::commands::ActiveMQStreamMessage::readDouble
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]

Reads a 64 bit double from the Stream message stream.

Returns

double value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.14 virtual float activemq::commands::ActiveMQStreamMessage::readFloat
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]

Reads a 32 bit float from the Stream message stream.

Returns

double value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.15 virtual int activemq::commands::ActiveMQStreamMessage::readInt
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]

Reads a 32 bit signed integer from the Stream message stream.

Returns

int value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.16 virtual long long activemq::commands::ActiveMQStreamMessage::readLong
 () const throw (cms::MessageEOFException,
 cms::MessageFormatException, cms::MessageNotReadableException,
 cms::CMSException) [virtual]

Reads a 64 bit long from the Stream message stream.

Returns

long long value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.17 virtual short activemq::commands::ActiveMQStreamMessage::readShort
 () const throw (cms::MessageEOFException,
 cms::MessageFormatException, cms::MessageNotReadableException,
 cms::CMSException) [virtual]

Reads a 16 bit signed short from the Stream message stream.

Returns

short value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.18 virtual std::string activemq::commands::ActiveMQStreamMessage::readString () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads an ASCII String from the Stream message stream.

Returns

String from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.19 virtual unsigned short activemq::commands::ActiveMQStreamMessage::readUnsignedShort () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 16 bit unsigned short from the Stream message stream.

Returns

unsigned short value from stream

Exceptions

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

6.64.2.20 virtual void activemq::commands::ActiveMQStreamMessage::reset () throw (cms::CMSException) [virtual]

Puts the message body in read-only mode and repositions the stream of bytes to the beginning.

Exceptions

CMSException

6.64.2.21 `virtual std::string activemq::commands::ActiveMQStreamMessage::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p.1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from **activemq::commands::Message** (p. 2033).

6.64.2.22 `virtual void activemq::commands::ActiveMQStreamMessage::writeBoolean (bool value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a boolean to the Stream message stream as a 1-byte value.

The value true is written as the value (byte)1; the value false is written as the value (byte)0.

Parameters

value boolean to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.23 `virtual void activemq::commands::ActiveMQStreamMessage::writeByte (unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a byte to the Stream message stream as a 1-byte value.

Parameters

value byte to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.24 `virtual void activemq::commands::ActiveMQStreamMessage::writeBytes (const unsigned char * value, std::size_t offset, std::size_t length) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a portion of a byte array to the Stream message stream.

size as the number of bytes to write.

Parameters

value bytes to write to the stream
offset the initial offset within the byte array
length the number of bytes to use

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.
MessageNotWriteableException - if the message is in read-only mode.

6.64.2.25 virtual void activemq::commands::ActiveMQStreamMessage::writeBytes
(const std::vector< unsigned char > & *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a byte array to the Stream message stream using the vector size as the number of bytes to write.

Parameters

value bytes to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.
MessageNotWriteableException - if the message is in read-only mode.

6.64.2.26 virtual void activemq::commands::ActiveMQStreamMessage::writeChar
(char *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a char to the Stream message stream as a 1-byte value.

Parameters

value char to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.
MessageNotWriteableException - if the message is in read-only mode.

6.64.2.27 virtual void activemq::commands::ActiveMQStreamMessage::writeDouble
(double *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a double to the Stream message stream as a 8 byte value.

Parameters

value double to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.28 virtual void activemq::commands::ActiveMQStreamMessage::writeFloat
(float *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a float to the Stream message stream as a 4 byte value.

Parameters

value float to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.29 virtual void activemq::commands::ActiveMQStreamMessage::writeInt
(int *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a signed int to the Stream message stream as a 4 byte value.

Parameters

value signed int to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.30 virtual void activemq::commands::ActiveMQStreamMessage::writeLong
(long long *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a long long to the Stream message stream as a 8 byte value.

Parameters

value signed long long to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.31 virtual void activemq::commands::ActiveMQStreamMessage::writeShort (short *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a signed short to the Stream message stream as a 2 byte value.

Parameters

value signed short to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.32 virtual void activemq::commands::ActiveMQStreamMessage::writeString (const std::string & *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes an ASCII String to the Stream message stream.

Parameters

value String to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.2.33 virtual void activemq::commands::ActiveMQStreamMessage::writeUnsignedShort (unsigned short *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a unsigned short to the Stream message stream as a 2 byte value.

Parameters

value unsigned short to write to the stream

Exceptions

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

6.64.3 Field Documentation

Un-marshal an object instance from the data input stream.
- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`
Write a object instance to data output stream.

6.65.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 436).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.65.2 Constructor & Destructor Documentation

6.65.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller()` [inline]

6.65.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller()` [inline, virtual]

6.65.3 Member Function Documentation

6.65.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.65.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.65.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut)` throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.65.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.65.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2177).

6.66

activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller

Class Reference

441

```
6.65.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::tightMars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2178).

```
6.65.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::tightUnm
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2178).

The documentation for this class was generated from the following file:

6.66.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 439).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the `activemq-openwire-generator` module

6.66.2 Constructor & Destructor Documentation

6.66.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller () [inline]`

6.66.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::~~ActiveMQStreamMessageMarshaller () [inline, virtual]`

6.66.3 Member Function Documentation

6.66.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.66.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.66.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::marshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.66.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.66.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2185).

6.66.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

6.67

activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller

Class Reference

445

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2186).

6.66.3.7 virtual void ac-

```
ativemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::tightUnm  
( OpenWireFormat * wireFormat, commands::DataStructure  
* dataStructure, decaf::io::DataInputStream * dataIn,  
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2186).

6.67.3 Member Function Documentation

6.67.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.67.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.67.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::marshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.67.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.67.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2173).

6.67.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

6.68

activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller

Class Reference

449

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::MessageMarshaller** (p. 2174).

6.67.3.7 virtual void ac-

```
activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::tightUnm  
( OpenWireFormat * wireFormat, commands::DataStructure  
* dataStructure, decaf::io::DataInputStream * dataIn,  
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::MessageMarshaller** (p. 2174).

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQStreamMessageMarshaller.h

6.68 activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMes Class Reference

6.68.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller () [inline, virtual]`

6.68.3 Member Function Documentation

6.68.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.68.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.68.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::marshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.68.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.68.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2181).

6.68.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

```
6.68.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::tightUnm
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v5/ActiveMQStreamMessageMarshaller.h`

6.69 activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMes

Class Reference

Marshaling code for Open Wire Format for `ActiveMQStreamMessageMarshaller` (p. 451).

```
#include <src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQStreamMessageMarshaller.h>
```

Write a object instance to data output stream.

6.69.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 451).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.69.2 Constructor & Destructor Documentation

6.69.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller () [inline]`

6.69.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller () [inline, virtual]`

6.69.3 Member Function Documentation

6.69.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.69.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.69.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::marshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167).

6.69.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168).

6.69.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

6.69.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.69.3.7 virtual void ac-
      tivemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::tightUnm
      ( OpenWireFormat * wireFormat, commands::DataStructure
      * dataStructure, decaf::io::DataInputStream * dataIn,
      utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2170).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQStreamMessageMarshaller.h`

6.70 activemq::commands::ActiveMQTempDestination Class Reference

```
#include <src/main/activemq/commands/ActiveMQTempDestination.h>
```

Inheritance diagram for `activemq::commands::ActiveMQTempDestination`:

Public Member Functions

- **ActiveMQTempDestination** ()
- **ActiveMQTempDestination** (const std::string &name)
- virtual ~**ActiveMQTempDestination** ()
- virtual unsigned char **getDataStructureType** () const
- virtual **ActiveMQTempDestination** * **cloneDataStructure** () const

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

- virtual void **copyDataStructure** (const **DataStructure** *src)

Copy the contents of the passed object into this objects members, overwriting any existing data.

- virtual std::string **toString** () const

*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*

- virtual bool **equals** (const **DataStructure** *value) const

*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*

- virtual void **close** () throw (cms::CMSException)

Closes down this Destination resulting in a call to dispose of the TempDestination resource at the Broker.

- void **setConnection** (core::ActiveMQConnection *connection)

Sets the Parent Connection that is notified when this destination is destroyed.

Static Public Attributes

- static const unsigned char **ID _ACTIVEMQTEMPDESTINATION** = 0

Protected Attributes

- core::ActiveMQConnection * **connection**

Connection that we call back on close to allow this resource to be cleaned up correctly at this end and at the Broker End.

6.70.1 Constructor & Destructor Documentation

- 6.70.1.1** `activemq::commands::ActiveMQTempDestination::ActiveMQTempDestination ()`
- 6.70.1.2** `activemq::commands::ActiveMQTempDestination::ActiveMQTempDestination (const std::string & name)`
- 6.70.1.3** `virtual
activemq::commands::ActiveMQTempDestination::~~ActiveMQTempDestination () [virtual]`

6.70.2 Member Function Documentation

- 6.70.2.1** `virtual ActiveMQTempDestination* activemq::commands::ActiveMQTempDestination::cloneDataStructure () const [inline, virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

- 6.70.2.2** `virtual void activemq::commands::ActiveMQTempDestination::close () throw (cms::CMSException) [virtual]`

Closes down this Destination resulting in a call to dispose of the TempDestination resource at the Broker.

This should only be called when the user is certain that they are finished with this destination. The TempDestination is not closed automatically on shutdown. throws **cms::CMSException** (p. 960)

Implements **cms::Closeable** (p. 952).

- 6.70.2.3** `virtual void activemq::commands::ActiveMQTempDestination::copyDataStructure (const DataStructure * src) [inline, virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

References `activemq::commands::ActiveMQDestination::copyDataStructure()`.

- 6.70.2.4** `virtual bool activemq::commands::ActiveMQTempDestination::equals (const DataStructure * value) const [inline, virtual]`

Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

References `activemq::commands::ActiveMQDestination::equals()`.

6.70.2.5 `virtual unsigned char activemq::commands::ActiveMQTempDestination::getDataStructureType () const [virtual]`

6.70.2.6 `void activemq::commands::ActiveMQTempDestination::setConnection (core::ActiveMQConnection * connection) [inline]`

Sets the Parent Connection that is notified when this destination is destroyed.

Parameters

connection - The parent connection.

6.70.2.7 `virtual std::string activemq::commands::ActiveMQTempDestination::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p.1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

6.70.3 Field Documentation

6.70.3.1 `core::ActiveMQConnection* activemq::commands::ActiveMQTempDestination::connection [protected]`

Connection that we call back on close to allow this resource to be cleaned up correctly at this end and at the Broker End.

6.70.3.2 `const unsigned char activemq::commands::ActiveMQTempDestination::ID _ - ACTIVEMQTEMPDESTINATION = 0 [static]`

6.71.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::ActiveMQTempDestinationMarshaller()` [inline]

6.71.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::~ActiveMQTempDestinationMarshaller()` [inline, virtual]

6.71.3 Member Function Documentation

6.71.3.1 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::marshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut)` throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 251).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 483), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 507).

6.71.3.2 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::unmarshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn)` throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

            * dataStructure, decaf::io::DataOutputStream * dataOut,
            utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 253).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 484), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 508).

```
6.71.3.5 virtual void ac-
      tivemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::tightUn
      ( OpenWireFormat * wireFormat, commands::DataStructure
      * dataStructure, decaf::io::DataInputStream * dataIn,
      utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 253).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 484), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 508).

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 255).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 487), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 511).

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled

6.72

activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller

Class Reference

467

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 256).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 487), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 511).

6.72.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller::tightMa`
(`OpenWireFormat * wireFormat`, `commands::DataStructure`
* `dataStructure`, `decaf::io::DataOutputStream * dataOut`,
`utils::BooleanStream * bs`) throw (`decaf::io::IOException`) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 257).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 488), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 512).

6.72.3.5 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller::tightUn`
(`OpenWireFormat * wireFormat`, `commands::DataStructure`
* `dataStructure`, `decaf::io::DataInputStream * dataIn`,
`utils::BooleanStream * bs`) throw (`decaf::io::IOException`) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller** (p. 257).

Reimplemented in **activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller** (p. 488), and **activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller** (p. 512).

6.73.2 Constructor & Destructor Documentation

6.73.2.1 **activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller::ActiveMQTempDestinationMarshaller** () [inline]

6.73.2.2 **virtual**
activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller::~ActiveMQTempDestinationMarshaller () [inline, virtual]

6.73.3 Member Function Documentation

6.73.3.1 **virtual void** **activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller::looseMarshal** (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller** (p. 259).

Reimplemented in **activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller** (p. 491), and **activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller** (p. 515).

```

6.73.3.2 virtual void ac-
    tivemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller::looseUn-
    ( OpenWireFormat * wireFormat, commands::DataStructure *
      dataStructure, decaf::io::DataInputStream * dataIn ) throw (
      decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 259).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 491), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 515).

```

6.73.3.3 virtual int ac-
    tivemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller::tightMa-
    ( OpenWireFormat * wireFormat, commands::DataStructure *
      dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
    ) [virtual]

```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 260).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 491), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 515).

6.73

activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller
Class Reference 471

```
6.73.3.4 virtual void ac-
        tivemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller::tightMa
        ( OpenWireFormat * wireFormat, commands::DataStructure
        * dataStructure, decaf::io::DataOutputStream * dataOut,
        utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller** (p. 260).

Reimplemented in **activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller** (p. 492), and **activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller** (p. 516).

```
6.73.3.5 virtual void ac-
        tivemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller::tightUnm

        * dataStructure, decaf::io::DataInputStream * dataIn,
        utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller** (p. 261).

Reimplemented in **activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller** (p. 492), and **activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller** (p. 516).

6.74.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller::~ActiveMQTempDestinationMarshaller()` [inline, virtual]

6.74.3 Member Function Documentation

6.74.3.1 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller::marshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut)` throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 263).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 495), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 519).

6.74.3.2 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller::unmarshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn)` throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 263).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 495), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 519).

```
6.74.3.3  virtual int ac-
          tivemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller::tightMa
          ( OpenWireFormat * wireFormat, commands::DataStructure *
            dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
          ) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 264).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 495), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 519).

```
6.74.3.4  virtual void ac-
          tivemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller::tightMa
          ( OpenWireFormat * wireFormat, commands::DataStructure
            * dataStructure, decaf::io::DataOutputStream * dataOut,
            utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn) throw (
decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 267).

Reimplemented in **activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller** (p. 499), and **activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller** (p. 523).

6.75.3.3 virtual int ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::tightMa-
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException
) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 268).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 499), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 523).

```
6.75.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::tightMa
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 268).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 500), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 524).

```
6.75.3.5 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::tightUn
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 269).

Reimplemented in **activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller** (p. 500), and **activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller** (p. 524).

```

Inheritance diagram for `activemq::commands::ActiveMQTempQueue`:

Public Member Functions

- **ActiveMQTempQueue** ()
- **ActiveMQTempQueue** (const std::string &name)
- virtual ~**ActiveMQTempQueue** ()
- virtual unsigned char **getDataStructureType** () const
- virtual **ActiveMQTempQueue** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
Converts the Destination Name into a String.
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual const **cms::Destination** * **getCMSDestination** () const
- virtual **cms::Destination::DestinationType** **getDestinationType** () const
Retrieve the Destination Type for this Destination.

- virtual **cms::Destination * clone** () const
Creates a new instance of this destination type that is a copy of this one, and returns it.
- virtual void **copy** (const **cms::Destination** &source)
Copies the contents of the given Destination object to this one.
- virtual const **cms::CMSProperties** & **getCMSProperties** () const
Retrieve any properties that might be part of the destination that was specified.
- virtual std::string **getQueueName** () const throw (cms::CMSException)
Gets the name of this queue.
- virtual void **destroy** () throw (cms::CMSException)
Destroy's the Temp Destination at the Broker.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQTEMPQUEUE** = 102

6.76.1 Constructor & Destructor Documentation

- 6.76.1.1 **activemq::commands::ActiveMQTempQueue::ActiveMQTempQueue** ()
- 6.76.1.2 **activemq::commands::ActiveMQTempQueue::ActiveMQTempQueue** (const std::string & *name*)
- 6.76.1.3 **virtual**
activemq::commands::ActiveMQTempQueue::~~ActiveMQTempQueue () [virtual]

6.76.2 Member Function Documentation

- 6.76.2.1 **virtual cms::Destination*** **activemq::commands::ActiveMQTempQueue::clone** ()
const [inline, virtual]

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns

cloned copy of this object

Implements **cms::Destination** (p.1389).

- 6.76.2.2 **virtual ActiveMQTempQueue*** **activemq::commands::ActiveMQTempQueue::cloneDataStructure** () **const** [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

6.76.2.3 `virtual void activemq::commands::ActiveMQTempQueue::copy (const cms::Destination & source) [inline, virtual]`

Copies the contents of the given Destination object to this one.

Parameters

source The source Destination object.

Implements `cms::Destination` (p. 1389).

6.76.2.4 `virtual void activemq::commands::ActiveMQTempQueue::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

6.76.2.5 `virtual void activemq::commands::ActiveMQTempQueue::destroy () throw (cms::CMSException) [virtual]`

Destroy's the Temp Destination at the Broker.

Exceptions

CMSException

Implements `cms::TemporaryQueue` (p. 2972).

6.76.2.6 `virtual bool activemq::commands::ActiveMQTempQueue::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

6.76.2.7 `virtual const cms::Destination* activemq::commands::ActiveMQTempQueue::getCMSDestination () const`
`[inline, virtual]`

Returns

the **cms::Destination** (p.1387) interface pointer that the objects that derive from this class implement.

6.76.2.8 `virtual const cms::CMSProperties& activemq::commands::ActiveMQTempQueue::getCMSProperties () const`
`[inline, virtual]`

Retrieve any properties that might be part of the destination that was specified.

This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns

const reference to a properties object.

Implements **cms::Destination** (p.1389).

6.76.2.9 `virtual unsigned char activemq::commands::ActiveMQTempQueue::getDataStructureType () const`
`[virtual]`

6.76.2.10 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQTempQueue::getDestinationType () const`
`[inline, virtual]`

Retrieve the Destination Type for this Destination.

Returns

The Destination Type

Implements **cms::Destination** (p.1389).

6.76.2.11 `virtual std::string activemq::commands::ActiveMQTempQueue::getQueueName () const throw (cms::CMSException)`
`[inline, virtual]`

Gets the name of this queue.

Returns

The queue name.

Implements **cms::TemporaryQueue** (p.2972).

6.76.2.12 `virtual std::string activemq::commands::ActiveMQTempQueue::toString
() const [virtual]`

Converts the Destination Name into a String.

Returns

string name

6.76.3 Field Documentation

6.77 `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQTempQueueMarshaller` (p. 481).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTempQueueMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller`:

Public Member Functions

- `ActiveMQTempQueueMarshaller ()`
- `virtual ~ActiveMQTempQueueMarshaller ()`
- `virtual commands::DataStructure * createObject () const`
Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaler.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.77.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 481).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.77.2 Constructor & Destructor Documentation

- 6.77.2.1** **activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::ActiveMQTempQueueMarshaller** () [inline]

- 6.77.2.2** **virtual**
activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::~~ActiveMQTempQueueMarshaller () [inline, virtual]

6.77.3 Member Function Documentation

- 6.77.3.1** **virtual commands::DataStructure*** **activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::createObject** () **const** [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

- 6.77.3.2** **virtual unsigned char** **activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::getDataStructureType** () **const** [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.77.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 460).

6.77.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 460).

6.77.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 461).

```
6.77.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 461).

```
6.77.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller** (p. 462).

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTempQueueMarshaller.h

6.78 activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller Class Reference

Write a object instance to data output stream.

- virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.78.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 485).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.78.2 Constructor & Destructor Documentation

6.78.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::ActiveMQTempQueueMarshaller () [inline]`

6.78.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::~~ActiveMQTempQueueMarshaller () [inline, virtual]`

6.78.3 Member Function Documentation

6.78.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.78.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.78.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 463).

6.78.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 464).

6.78.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 464).

```
6.78.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 465).

```
6.78.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException*** if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller** (p. 465).

6.79.3 Member Function Documentation

6.79.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.79.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.79.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 467).

6.79.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 468).

6.79.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 468).

```
6.79.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 469).

```
6.79.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException*** if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller** (p. 469).

6.80.3 Member Function Documentation

6.80.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.80.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.80.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 471).

6.80.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 471).

6.80.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 472).

```
6.80.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 472).

```
6.80.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException*** if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller** (p. 473).

The documentation for this class was generated from the following file:

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.81.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 474).

6.81.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 475).

6.81.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 475).

```
6.81.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::tightMarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 476).

```
6.81.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller** (p. 476).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQTempQueueMarshaller.h`

6.82 activemq::commands::ActiveMQTempTopic Class Reference

```
#include <src/main/activemq/commands/ActiveMQTempTopic.h>
```

Inheritance diagram for `activemq::commands::ActiveMQTempTopic`:

Public Member Functions

- **ActiveMQTempTopic** ()
- **ActiveMQTempTopic** (const std::string &name)
- virtual **~ActiveMQTempTopic** ()
- virtual unsigned char **getDataStructureType** () const
- virtual **ActiveMQTempTopic * cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
Converts the Destination Name into a String.
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual const **cms::Destination** * **getCMSDestination** () const
- virtual **cms::Destination::DestinationType** **getDestinationType** () const
Retrieve the Destination Type for this Destination.
- virtual **cms::Destination** * **clone** () const
Creates a new instance of this destination type that is a copy of this one, and returns it.
- virtual void **copy** (const **cms::Destination** &source)
Copies the contents of the given Destinastion object to this one.
- virtual const **cms::CMSProperties** & **getCMSProperties** () const

Retrieve any properties that might be part of the destination that was specified.

- virtual std::string **getTopicName** () const throw (cms::CMSEException)

Gets the name of this topic.

- virtual void **destroy** () throw (cms::CMSEException)

Destroy's the Temp Destination at the Broker.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQTEMPTOPIC** = 103

6.82.1 Constructor & Destructor Documentation

6.82.1.1 `activemq::commands::ActiveMQTempTopic::ActiveMQTempTopic ()`

6.82.1.2 `activemq::commands::ActiveMQTempTopic::ActiveMQTempTopic (const std::string & name)`

6.82.1.3 `virtual
activemq::commands::ActiveMQTempTopic::~~ActiveMQTempTopic ()
[virtual]`

6.82.2 Member Function Documentation

6.82.2.1 `virtual cms::Destination* ac-
tivismq::commands::ActiveMQTempTopic::clone ()
const [inline, virtual]`

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns

cloned copy of this object

Implements **cms::Destination** (p.1389).

6.82.2.2 `virtual ActiveMQTempTopic* ac-
tivismq::commands::ActiveMQTempTopic::cloneDataStructure () const
[virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

6.82.2.3 `virtual void activemq::commands::ActiveMQTempTopic::copy (const cms::Destination & source) [inline, virtual]`

Copies the contents of the given Destination object to this one.

Parameters

source The source Destination object.

Implements `cms::Destination` (p.1389).

6.82.2.4 `virtual void activemq::commands::ActiveMQTempTopic::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

6.82.2.5 `virtual void activemq::commands::ActiveMQTempTopic::destroy () throw (cms::CMSException) [virtual]`

Destroy's the Temp Destination at the Broker.

Exceptions

CMSException

Implements `cms::TemporaryTopic` (p.2973).

6.82.2.6 `virtual bool activemq::commands::ActiveMQTempTopic::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p.1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

6.82.2.7 `virtual const cms::Destination* activemq::commands::ActiveMQTempTopic::getCMSDestination () const [inline, virtual]`

Returns

the `cms::Destination` (p.1387) interface pointer that the objects that derive from this class implement.

6.82.2.8 `virtual const cms::CMSProperties& activemq::commands::ActiveMQTempTopic::getCMSProperties () const`
[inline, virtual]

Retrieve any properties that might be part of the destination that was specified.

This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns

const reference to a properties object.

Implements **cms::Destination** (p.1389).

6.82.2.9 `virtual unsigned char activemq::commands::ActiveMQTempTopic::getDataStructureType () const`
[virtual]

6.82.2.10 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQTempTopic::getDestinationType () const`
[inline, virtual]

Retrieve the Destination Type for this Destination.

Returns

The Destination Type

Implements **cms::Destination** (p.1389).

6.82.2.11 `virtual std::string activemq::commands::ActiveMQTempTopic::getTopicName () const throw (cms::CMSException)`
[inline, virtual]

Gets the name of this topic.

Returns

The topic name.

Implements **cms::TemporaryTopic** (p.2974).

6.82.2.12 `virtual std::string activemq::commands::ActiveMQTempTopic::toString () const`
[virtual]

Converts the Destination Name into a String.

Returns

string name

6.82.3 Field Documentation

- 6.82.3.1 `const unsigned char activemq::commands::ActiveMQTempTopic::ID _ -
 ACTIVEMQTEMPTOPIC = 103 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQTempTopic.h`

6.83 activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopic Class Reference

Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 505).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTempTopicMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller`:

Public Member Functions

- **ActiveMQTempTopicMarshaller** ()
- virtual **~ActiveMQTempTopicMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat** *wireFormat, **com-
 mands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn,
utils::BooleanStream *bs) throw (decaf::io::IOException)
Un-marshall an object instance from the data input stream.
- virtual int **tightMarshal1** (**OpenWireFormat** *wireFormat, **com-
 mands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (de-
 caf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **com-
 mands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut,
utils::BooleanStream *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **com-
 mands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshall an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.83.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 505). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.83.2 Constructor & Destructor Documentation

6.83.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::ActiveMQTempTopicMarshaller () [inline]`

6.83.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::~~ActiveMQTempTopicMarshaller () [inline, virtual]`

6.83.3 Member Function Documentation

6.83.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.83.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.83.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 460).

6.83.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 460).

6.83.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 461).

```
6.83.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 461).

```
6.83.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller** (p. 462).

The documentation for this class was generated from the following file:

6.84.2 Constructor & Destructor Documentation

6.84.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::ActiveMQTempTopicMarshaller () [inline]`

6.84.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::~~ActiveMQTempTopicMarshaller () [inline, virtual]`

6.84.3 Member Function Documentation

6.84.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.84.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.84.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 463).

6.84.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 464).

6.84.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 464).

```
6.84.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 465).

```
6.84.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException*** if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller** (p. 465).

6.85.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::~~ActiveMQTempTopicMarshaller () [inline, virtual]`

6.85.3 Member Function Documentation

6.85.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.85.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.85.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 467).

6.85.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 468).

6.85.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 468).

```
6.85.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 469).

```
6.85.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 469).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQTempTopicMarshaller.h`

6.86 activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller Class Reference

Marshaling code for Open Wire Format for `ActiveMQTempTopicMarshaller` (p. 517).

```
#include <src/main/activemq/wireformat/openwire/marshal/v5/ActiveMQTempTopicMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller`:

Public Member Functions

Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`

Un-marshall an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.86.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 517). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.86.2 Constructor & Destructor Documentation

6.86.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::ActiveMQTempTopicMarshaller () [inline]`

6.86.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::~~ActiveMQTempTopicMarshaller () [inline, virtual]`

6.86.3 Member Function Documentation

6.86.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.86.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.86.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 471).

6.86.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 471).

6.86.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 472).

```
6.86.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 472).

```
6.86.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException*** if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller** (p. 473).

The documentation for this class was generated from the following file:

6.87.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::ActiveMQTempTopicMarshaller () [inline]`

6.87.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::~ActiveMQTempTopicMarshaller () [inline, virtual]`

6.87.3 Member Function Documentation

6.87.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.87.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.87.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 474).

6.87.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 475).

6.87.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 475).

```
6.87.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 476).

```
6.87.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::tightUnmarsh
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller** (p. 476).

The documentation for this class was generated from the following file:

6.88 activemq::commands::ActiveMQTextMessage Class Reference

```
#include <src/main/activemq/commands/ActiveMQTextMessage.h>
```

Inheritance diagram for `activemq::commands::ActiveMQTextMessage`:

Public Member Functions

- **ActiveMQTextMessage** ()
- virtual **~ActiveMQTextMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaller share.
- virtual **ActiveMQTextMessage * cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*
- virtual void **clearBody** () throw (cms::CMSException)
Clears out the body of the message.
- virtual void **beforeMarshal** (wireformat::WireFormat *wireFormat) throw (decaf::io::IOException)
*Performs any cleanup or other tasks that must be done before the **Message** (p. 2018) is marshalled to its binary WireFormat version.*
- virtual unsigned int **getSize** () const
Returns the Size of this message in Bytes.

- virtual **cms::TextMessage * clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual std::string **getText** () const throw (cms::CMSEException)
Gets the message character buffer.
- virtual void **setText** (const char *msg) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets the message contents, does not take ownership of the passed char, but copies it instead.*
- virtual void **setText** (const std::string &msg) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets the message contents.

Data Fields

- std::auto_ptr< std::string > **text**

Static Public Attributes

- static const unsigned char **ID _ACTIVEMQTEXTMESSAGE** = 28

6.88.1 Constructor & Destructor Documentation

- 6.88.1.1 **activemq::commands::ActiveMQTextMessage::ActiveMQTextMessage** (
)
- 6.88.1.2 **virtual**
activemq::commands::ActiveMQTextMessage::~~ActiveMQTextMessage (
) [virtual]

6.88.2 Member Function Documentation

- 6.88.2.1 **virtual void activemq::commands::ActiveMQTextMessage::beforeMarshal**
(**wireformat::WireFormat * wireFormat**) throw (**decaf::io::IOException**
) [virtual]

Performs any cleanup or other tasks that must be done before the **Message** (p. 2018) is marshalled to its binary WireFormat version.

Parameters

wireFormat the WireFormat instance that is marshalling this message.

Implements **activemq::wireformat::MarshalAware** (p. 1994).

6.88.2.2 `virtual void activemq::commands::ActiveMQTextMessage::clearBody ()
throw (cms::CMSException) [virtual]`

Clears out the body of the message.

This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::TextMessage >` (p. 331).

6.88.2.3 `virtual cms::TextMessage* ac-
tivemq::commands::ActiveMQTextMessage::clone ()
const [inline, virtual]`

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns

new copy of this message

6.88.2.4 `virtual ActiveMQTextMessage* ac-
tivemq::commands::ActiveMQTextMessage::cloneDataStructure ()
const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2023).

6.88.2.5 `virtual void ac-
tivemq::commands::ActiveMQTextMessage::copyDataStructure (const
DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2023).

6.88.2.6 `virtual bool activemq::commands::ActiveMQTextMessage::equals (const
DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate<cms::TextMessage>` (p. 331).

6.88.2.7 `virtual unsigned char activemq::commands::ActiveMQTextMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns

new `DataStructure` (p. 1372) type copy.

Reimplemented from `activemq::commands::Message` (p. 2025).

6.88.2.8 `virtual unsigned int activemq::commands::ActiveMQTextMessage::getSize () const [virtual]`

Returns the Size of this message in Bytes.

Returns

number of bytes this message equates to.

Reimplemented from `activemq::commands::Message` (p. 2028).

6.88.2.9 `virtual std::string activemq::commands::ActiveMQTextMessage::getText () const throw (cms::CMSException) [virtual]`

Gets the message character buffer.

Returns

The message character buffer.

Exceptions

CMSException - if an internal error occurs.

6.88.2.10 `virtual void activemq::commands::ActiveMQTextMessage::setText (const std::string & msg) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Sets the message contents.

Parameters

msg The message buffer.

Exceptions

CMSEException - if an internal error occurs.

MessageNotWriteableException - if the message is in read-only mode..

6.88.2.11 virtual void activemq::commands::ActiveMQTextMessage::setText
(const char * *msg*) throw (cms::MessageNotWriteableException,
cms::CMSEException) [virtual]

Sets the message contents, does not take ownership of the passed char*, but copies it instead.

Parameters

msg The message buffer.

Exceptions

CMSEException - if an internal error occurs.

MessageNotWriteableException - if the message is in read-only mode..

6.88.2.12 virtual std::string activemq::commands::ActiveMQTextMessage::toString
() const [virtual]

Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from **activemq::commands::Message** (p. 2033).

6.88.3 Field Documentation

Write a object instance to data output stream.

6.89.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p. 529).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the `activemq-openwire-generator` module

6.89.2 Constructor & Destructor Documentation

6.89.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::ActiveMQTextMessageMarshaller () [inline]`

6.89.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller () [inline, virtual]`

6.89.3 Member Function Documentation

6.89.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.89.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.89.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.89.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176).

6.89.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2177).

6.89.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

```
6.89.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178).

The documentation for this class was generated from the following file:

- virtual int **tightMarshal1** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshall an object instance from the data input stream.
- virtual void **looseMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)
Write a object instance to data output stream.

6.90.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p.533).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.90.2 Constructor & Destructor Documentation

6.90.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::ActiveMQTextMessageMarshaller () [inline]`

6.90.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller () [inline, virtual]`

6.90.3 Member Function Documentation

6.90.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.90.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.90.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.90.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2184).

6.90.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2185).

6.90.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

```
6.90.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQTextMessageMarshaller.h`

6.91 `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller` Class Reference

Marshaling code for Open Wire Format for `ActiveMQTextMessageMarshaller` (p. 537).

```
#include <src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQTextMessageMarshaller.h>
```

6.91.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p.537).
 NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.91.2 Constructor & Destructor Documentation

6.91.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::ActiveMQTextMessageMarshaller()` [inline]

6.91.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller()` [inline, virtual]

6.91.3 Member Function Documentation

6.91.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::createObjectFromWireFormat(const commands::DataStructure&) const` [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.91.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.91.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::looseMarshal(const OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.91.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172).

6.91.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2173).

6.91.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

```
6.91.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174).

6.92.3 Member Function Documentation

6.92.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.92.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.92.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.92.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2180).

6.92.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2181).

6.92.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2182).

```
6.92.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

6.93.2 Constructor & Destructor Documentation

6.93.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::ActiveMQTextMessageMarshaller () [inline]`

6.93.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller () [inline, virtual]`

6.93.3 Member Function Documentation

6.93.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.93.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.93.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167).

6.93.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168).

6.93.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

6.93.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169).

```
6.93.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::tightUnmars
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2170).

6.94.1 Constructor & Destructor Documentation

6.94.1.1 `activemq::commands::ActiveMQTopic::ActiveMQTopic ()`

6.94.1.2 `activemq::commands::ActiveMQTopic::ActiveMQTopic (const std::string & name)`

6.94.1.3 `virtual activemq::commands::ActiveMQTopic::~~ActiveMQTopic ()`
[virtual]

6.94.2 Member Function Documentation

6.94.2.1 `virtual cms::Destination* activemq::commands::ActiveMQTopic::clone () const` [inline, virtual]

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns

cloned copy of this object

Implements **cms::Destination** (p.1389).

6.94.2.2 `virtual ActiveMQTopic* activemq::commands::ActiveMQTopic::cloneDataStructure () const` [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

6.94.2.3 `virtual void activemq::commands::ActiveMQTopic::copy (const cms::Destination & source)` [inline, virtual]

Copies the contents of the given Destination object to this one.

Parameters

source The source Destination object.

Implements **cms::Destination** (p.1389).

6.94.2.4 `virtual void activemq::commands::ActiveMQTopic::copyDataStructure (const DataStructure * src)` [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

6.94.2.5 `virtual bool activemq::commands::ActiveMQTopic::equals (const DataStructure * value) const` [inline, virtual]

Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

References `activemq::commands::ActiveMQDestination::equals()`.

6.94.2.6 `virtual const cms::Destination* activemq::commands::ActiveMQTopic::getCMSDestination () const` [inline, virtual]

Returns

the **cms::Destination** (p. 1387) interface pointer that the objects that derive from this class implement.

6.94.2.7 `virtual const cms::CMSProperties& activemq::commands::ActiveMQTopic::getCMSProperties () const` [inline, virtual]

Retrieve any properties that might be part of the destination that was specified. This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns

const reference to a properties object.

Implements **cms::Destination** (p. 1389).

6.94.2.8 `virtual unsigned char activemq::commands::ActiveMQTopic::getDataStructureType () const` [virtual]

6.94.2.9 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQTopic::getDestinationType () const` [inline, virtual]

Retrieve the Destination Type for this Destination.

Returns

The Destination Type

Implements **cms::Destination** (p. 1389).

6.94.2.10 `virtual std::string activemq::commands::ActiveMQTopic::getTopicName () const throw (cms::CMSException) [inline, virtual]`

Gets the name of this topic.

Returns

The topic name.

Implements **cms::Topic** (p. 3014).

6.94.2.11 `virtual std::string activemq::commands::ActiveMQTopic::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

6.94.3 Field Documentation

6.94.3.1 `const unsigned char activemq::commands::ActiveMQTopic::ID_ - ACTIVEMQTOPIC = 101 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQTopic.h`

6.95 activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 553).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTopicMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller`:

Public Member Functions

- **ActiveMQTopicMarshaller** ()
- virtual **~ActiveMQTopicMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.

- virtual void **tightUnmarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual int **tightMarshal1** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.95.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 553). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.95.2 Constructor & Destructor Documentation

6.95.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller () [inline]`

6.95.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller () [inline, virtual]`

6.95.3 Member Function Documentation

6.95.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.95.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::getDataStructureType() const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.95.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller** (p. 251).

6.95.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 252).

```
6.95.3.5 virtual int ac-
      tivemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::tightMarshal1
      ( OpenWireFormat * wireFormat, commands::DataStructure *
        dataStructure, utils::BooleanStream * bs ) throw ( decaf::io::IOException
      ) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 252).

```
6.95.3.6 virtual void ac-
      tivemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::tightMarshal2
      ( OpenWireFormat * wireFormat, commands::DataStructure
        * dataStructure, decaf::io::DataOutputStream * dataOut,
        utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 253).

```
6.95.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller** (p. 253).

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTopicMarshaller.h

6.96 activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 557).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQTopicMarshaller.h>
```

Inheritance diagram for **activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller**:

Public Member Functions

- **ActiveMQTopicMarshaller** ()

- virtual void **looseMarshal** (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.96.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 557). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.96.2 Constructor & Destructor Documentation

6.96.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller () [inline]`

6.96.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller () [inline, virtual]`

6.96.3 Member Function Documentation

6.96.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.96.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::getDataStructureType() const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.96.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 255).

6.96.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 256).

6.96.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 256).

6.96.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 257).

6.96.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 257).

The documentation for this class was generated from the following file:

6.97.3 Member Function Documentation

6.97.3.1 **virtual commands::DataStructure*** **activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::createObject** () **const** [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.97.3.2 **virtual unsigned char** **activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::getDataStructureType** () **const** [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.97.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 259).

6.97.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 259).

6.97.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 260).

```
6.97.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 260).

```
6.97.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller** (p. 261).

6.98.2 Constructor & Destructor Documentation

6.98.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller () [inline]`

6.98.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller () [inline, virtual]`

6.98.3 Member Function Documentation

6.98.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.98.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.98.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 263).

6.98.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 263).

6.98.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 264).

```
6.98.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 264).

```
6.98.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException*** if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller** (p. 265).

The documentation for this class was generated from the following file:

Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaller.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal1** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)

Un-marshall an object instance from the data input stream.

- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.99.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 569). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.99.2 Constructor & Destructor Documentation

6.99.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller () [inline]`

6.99.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller () [inline, virtual]`

6.99.3 Member Function Documentation

6.99.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.99.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.99.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 267).

6.99.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 267).

6.99.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 268).

```
6.99.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 268).

```
6.99.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 269).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQTopicMarshaller.h`

6.100 activemq::core::ActiveMQTransactionContext Class Reference

Transaction Management class, hold messages that are to be redelivered upon a request to roll-back.

```
#include <src/main/activemq/core/ActiveMQTransactionContext.h>
```

Public Member Functions

- **ActiveMQTransactionContext** (**ActiveMQSession** *session, const **decaf::util::Properties** &properties)
Constructor.
- virtual **~ActiveMQTransactionContext** ()
- virtual void **addSynchronization** (const **Pointer**< **Synchronization** > &sync)
*Adds a **Synchronization** (p. 2945) to this Transaction.*
- virtual void **removeSynchronization** (const **Pointer**< **Synchronization** > &sync)
*Removes a **Synchronization** (p. 2945) to this Transaction.*
- virtual void **begin** () throw (exceptions::ActiveMQException)
Begins a new transaction if one is not currently in progress.
- virtual void **commit** () throw (exceptions::ActiveMQException)
Commit the current Transaction.
- virtual void **rollback** () throw (exceptions::ActiveMQException)
Rollback the current Transaction.
- virtual const **decaf::lang::Pointer**< **commands::TransactionId** > & **getTransactionId** () const
Get the Transaction Id object for the current Transaction, returns NULL if no transaction is running.
- virtual bool **isInTransaction** () const
Checks to see if there is currently a Transaction in progress returns false if not, true otherwise.
- virtual int **getMaximumRedeliveries** () const
- virtual long long **getRedeliveryDelay** () const

6.100.1 Detailed Description

Transaction Management class, hold messages that are to be redelivered upon a request to roll-back. The Transaction represents an always running transaction, when it is committed or rolled back it silently creates a new transaction for the next set of messages. The only way to permanently end this transaction is to delete it.

Configuration options

`transaction.maxRedeliveryCount` Max number of times a message can be re-delivered, if the session is rolled back more than this many time, the message is dropped.

`transaction.redeliveryDelay` Time in Milliseconds between message redelivery for rolled back transactions.

Since

2.0

6.100.2 Constructor & Destructor Documentation

6.100.2.1 `activemq::core::ActiveMQTransactionContext::ActiveMQTransactionContext (ActiveMQSession * session, const decaf::util::Properties & properties)`

Constructor.

Parameters

session The session that contains this transaction

properties Configuration parameters for this object

6.100.2.2 `virtual
activemq::core::ActiveMQTransactionContext::~~ActiveMQTransactionContext
() [virtual]`

6.100.3 Member Function Documentation

6.100.3.1 `virtual void ac-
tivemq::core::ActiveMQTransactionContext::addSynchronization (const
Pointer< Synchronization > & sync) [virtual]`

Adds a **Synchronization** (p. 2945) to this Transaction.

Parameters

sync - The **Synchronization** (p. 2945) instance to add.

6.100.3.2 `virtual void activemq::core::ActiveMQTransactionContext::begin ()
throw (exceptions::ActiveMQException) [virtual]`

Begins a new transaction if one is not currently in progress.

Exceptions*ActiveMQException*

6.100.3.3 virtual void activemq::core::ActiveMQTransactionContext::commit ()
throw (exceptions::ActiveMQException) [virtual]

Commit the current Transaction.

Exceptions*ActiveMQException*

6.100.3.4 virtual int activemq::core::ActiveMQTransactionContext::getMaximumRedeliveries () const [virtual]

Returns

The Maximum number of time the client will attempt to redeliver a message from a rolled back transaction before marking the message as not consumed by this client.

6.100.3.5 virtual long long activemq::core::ActiveMQTransactionContext::getRedeliveryDelay () const [virtual]

Returns

The time in Milliseconds that this client is configured to wait in between redelivery attempts for a Message in a rolled back transaction.

6.100.3.6 virtual const decaf::lang::Pointer<commands::TransactionId>& activemq::core::ActiveMQTransactionContext::getTransactionId () const [virtual]

Get the Transaction Id object for the current Transaction, returns NULL if no transaction is running.

Returns

TransactionInfo

Exceptions

InvalidStateException if a Transaction is not in progress.

6.100.3.7 virtual bool activemq::core::ActiveMQTransactionContext::isInTransaction () const [virtual]

Checks to see if there is currently a Transaction in progress returns false if not, true otherwise.

Returns

true if a transaction is in progress.

6.100.3.8 virtual void activemq::core::ActiveMQTransactionContext::removeSynchronization (const Pointer< Synchronization > & *sync*) [virtual]

Removes a **Synchronization** (p. 2945) to this Transaction.

Parameters

sync - The **Synchronization** (p. 2945) instance to add.

6.100.3.9 virtual void activemq::core::ActiveMQTransactionContext::rollback () throw (exceptions::ActiveMQException) [virtual]

Rollback the current Transaction.

Exceptions

ActiveMQException

The documentation for this class was generated from the following file:

- src/main/activemq/core/ActiveMQTransactionContext.h

6.101 decaf::lang::Appendable Class Reference

```
#include <src/main/decaf/lang/Appendable.h>
```

Inheritance diagram for decaf::lang::Appendable:

Public Member Functions

- virtual ~**Appendable** ()
- virtual **Appendable** & **append** (char value)=0 throw (decaf::lang::Exception)
*Appends the specified character to this **Appendable** (p. 576).*
- virtual **Appendable** & **append** (const **CharSequence** *csq)=0 throw (decaf::lang::Exception)
*Appends the specified character sequence to this **Appendable** (p. 576).*
- virtual **Appendable** & **append** (const **CharSequence** *csq, std::size_t start, std::size_t end)=0 throw (decaf::lang::Exception)
*Appends a subsequence of the specified character sequence to this **Appendable** (p. 576).*

6.101.1 Constructor & Destructor Documentation

6.101.1.1 virtual decaf::lang::Appendable::~~Appendable () [inline, virtual]

6.101.2 Member Function Documentation

6.101.2.1 virtual Appendable& decaf::lang::Appendable::append (char *value*)
throw (decaf::lang::Exception) [pure virtual]

Appends the specified character to this **Appendable** (p. 576).

Parameters

value - The character to append

Returns

a Reference to this **Appendable** (p. 576)

Exceptions

Exception (p. 1476) if an error occurs.

6.101.2.2 virtual Appendable& decaf::lang::Appendable::append (const
CharSequence * *csq*, std::size_t *start*, std::size_t *end*) throw (decaf::lang::Exception) [pure virtual]

Appends a subsequence of the specified character sequence to this **Appendable** (p. 576).

Parameters

csq - The character sequence from which a subsequence will be appended. If *csq* is NULL, then characters will be appended as if *csq* contained the string "null".

start - The index of the first character in the subsequence

end - The index of the character following the last character in the subsequence

Returns

a Reference to this **Appendable** (p. 576)

Exceptions

Exception (p. 1476) if an error occurs.

IndexOutOfBoundsException *start* is greater than *end*, or *end* is greater than *csq.length()*

6.101.2.3 virtual Appendable& decaf::lang::Appendable::append (const
CharSequence * *csq*) throw (decaf::lang::Exception) [pure virtual]

Appends the specified character sequence to this **Appendable** (p. 576).

Parameters

csq - The character sequence from which a subsequence will be appended. If *csq* is NULL, then characters will be appended as if *csq* contained the string "null".

Returns

- a Reference to this **Appendable** (p. 576)

Exceptions

- Exception* (p. 1476) if an error occurs.

The documentation for this class was generated from the following file:

- `src/main/decaf/lang/Appendable.h`

6.102 decaf::internal::AprPool Class Reference

Wraps an APR pool object so that classes in decaf can create a static member for use in static methods where apr function calls that need a pool are made.

```
#include <src/main/decaf/internal/AprPool.h>
```

Public Member Functions

- **AprPool** ()
- virtual **~AprPool** ()
- `apr_pool_t * getAprPool () const`
Gets the internal APR Pool.
- void **cleanup** ()
Clears data that was allocated by this pool.

Static Public Member Functions

- `static apr_pool_t * getGlobalPool ()`
Gets a pointer to the Global APR Pool used for the Application.

6.102.1 Detailed Description

Wraps an APR pool object so that classes in decaf can create a static member for use in static methods where apr function calls that need a pool are made.

6.102.2 Constructor & Destructor Documentation

6.102.2.1 decaf::internal::AprPool::AprPool ()

6.102.2.2 virtual decaf::internal::AprPool::~~AprPool () [virtual]

6.102.3 Member Function Documentation

6.102.3.1 void decaf::internal::AprPool::cleanup ()

Clears data that was allocated by this pool.

Users should call this after getting the data from the APR functions and copying it to someplace safe.

6.102.3.2 apr_pool_t* decaf::internal::AprPool::getAprPool () const

Gets the internal APR Pool.

Returns

the internal APR pool

6.102.3.3 static apr_pool_t* decaf::internal::AprPool::getGlobalPool ()
[static]

Gets a pointer to the Global APR Pool used for the Application.

Returns

pointer to the global APR Pool

The documentation for this class was generated from the following file:

- src/main/decaf/internal/**AprPool.h**

6.103 decaf::util::concurrent::atomic::AtomicBoolean Class Reference

A boolean value that may be updated atomically.

```
#include <src/main/decaf/util/concurrent/atomic/AtomicBoolean.h>
```

Public Member Functions

- **AtomicBoolean** ()
*Creates a new **AtomicBoolean** (p. 579) whose initial value is false.*
- **AtomicBoolean** (bool initialValue)
*Creates a new **AtomicBoolean** (p. 579) with the initial value.*

- virtual `~AtomicBoolean ()`
- bool `get () const`
*Gets the current value of this **AtomicBoolean** (p. 579).*
- void `set (bool newValue)`
Unconditionally sets to the given value.
- bool `compareAndSet (bool expect, bool update)`
Atomically sets the value to the given updated value if the current value == the expected value.
- bool `getAndSet (bool newValue)`
Atomically sets to the given value and returns the previous value.
- std::string `toString () const`
Returns the String representation of the current value.

6.103.1 Detailed Description

A boolean value that may be updated atomically. An **AtomicBoolean** (p. 579) is used in applications such as atomically updated flags, and cannot be used as a replacement for a Boolean.

6.103.2 Constructor & Destructor Documentation

6.103.2.1 `decaf::util::concurrent::atomic::AtomicBoolean::AtomicBoolean ()`

Creates a new **AtomicBoolean** (p. 579) whose initial value is false.

6.103.2.2 `decaf::util::concurrent::atomic::AtomicBoolean::AtomicBoolean (bool initialValue)`

Creates a new **AtomicBoolean** (p. 579) with the initial value.

Parameters

initialValue - The initial value of this boolean.

6.103.2.3 `virtual decaf::util::concurrent::atomic::AtomicBoolean::~~AtomicBoolean () [inline, virtual]`

6.103.3 Member Function Documentation

6.103.3.1 `bool decaf::util::concurrent::atomic::AtomicBoolean::compareAndSet (bool expect, bool update)`

Atomically sets the value to the given updated value if the current value == the expected value.

Parameters

expect - the expected value

update - the new value

Returns

true if successful. False return indicates that the actual value was not equal to the expected value.

6.103.3.2 `bool decaf::util::concurrent::atomic::AtomicBoolean::get () const` [inline]

Gets the current value of this **AtomicBoolean** (p.579).

Returns

the currently set value.

6.103.3.3 `bool decaf::util::concurrent::atomic::AtomicBoolean::getAndSet (bool new Value)`

Atomically sets to the given value and returns the previous value.

Parameters

new Value - the new value

Returns

the previous value

6.103.3.4 `void decaf::util::concurrent::atomic::AtomicBoolean::set (bool new Value)` [inline]

Unconditionally sets to the given value.

Parameters

new Value - the new value

6.103.3.5 `std::string decaf::util::concurrent::atomic::AtomicBoolean::toString () const`

Returns the String representation of the current value.

Returns

the String representation of the current value.

The documentation for this class was generated from the following file:

- `src/main/decaf/util/concurrent/atomic/AtomicBoolean.h`

6.104 decaf::util::concurrent::atomic::AtomicInteger Class Reference

An int value that may be updated atomically.

```
#include <src/main/decaf/util/concurrent/atomic/AtomicInteger.h>
```

Inheritance diagram for decaf::util::concurrent::atomic::AtomicInteger:

Public Member Functions

- **AtomicInteger** ()
*Create a new **AtomicInteger** (p. 582) with an initial value of 0.*
- **AtomicInteger** (int initialValue)
*Create a new **AtomicInteger** (p. 582) with the given initial value.*
- virtual **~AtomicInteger** ()
- int **get** () const
Gets the current value.
- void **set** (int newValue)
Sets to the given value.
- int **getAndSet** (int newValue)
Atomically sets to the given value and returns the old value.
- bool **compareAndSet** (int expect, int update)
Atomically sets the value to the given updated value if the current value == the expected value.
- int **getAndIncrement** ()
Atomically increments by one the current value.
- int **getAndDecrement** ()
Atomically decrements by one the current value.
- int **getAndAdd** (int delta)
Atomically adds the given value to the current value.
- int **incrementAndGet** ()
Atomically increments by one the current value.
- int **decrementAndGet** ()
Atomically decrements by one the current value.
- int **addAndGet** (int delta)
Atomically adds the given value to the current value.

- `std::string toString () const`
Returns the String representation of the current value.
- `int intValue () const`
Description copied from class: Number Returns the value of the specified number as an int.
- `long long longValue () const`
Description copied from class: Number Returns the value of the specified number as a long.
- `float floatValue () const`
Description copied from class: Number Returns the value of the specified number as a float.
- `double doubleValue () const`
Description copied from class: Number Returns the value of the specified number as a double.

6.104.1 Detailed Description

An int value that may be updated atomically. An **AtomicInteger** (p. 582) is used in applications such as atomically incremented counters, and cannot be used as a replacement for an Integer. However, this class does extend Number to allow uniform access by tools and utilities that deal with numerically-based classes.

6.104.2 Constructor & Destructor Documentation

6.104.2.1 decaf::util::concurrent::atomic::AtomicInteger::AtomicInteger ()

Create a new **AtomicInteger** (p. 582) with an initial value of 0.

6.104.2.2 decaf::util::concurrent::atomic::AtomicInteger::AtomicInteger (int *initialValue*)

Create a new **AtomicInteger** (p. 582) with the given initial value.

Parameters

initialValue - The initial value of this object.

6.104.2.3 virtual decaf::util::concurrent::atomic::AtomicInteger::~~AtomicInteger () [inline, virtual]

6.104.3 Member Function Documentation

6.104.3.1 int decaf::util::concurrent::atomic::AtomicInteger::addAndGet (int *delta*)

Atomically adds the given value to the current value.

Parameters

delta - the value to add.

Returns

the updated value.

6.104.3.2 `bool decaf::util::concurrent::atomic::AtomicInteger::compareAndSet (int expect, int update)`

Atomically sets the value to the given updated value if the current value == the expected value.

Parameters

expect - the expected value

update - the new value

Returns

true if successful. False return indicates that the actual value was not equal to the expected value.

6.104.3.3 `int decaf::util::concurrent::atomic::AtomicInteger::decrementAndGet ()`

Atomically decrements by one the current value.

Returns

the updated value.

Referenced by `decaf::lang::AtomicRefCounter::release()`.

6.104.3.4 `double decaf::util::concurrent::atomic::AtomicInteger::doubleValue () const [virtual]`

Description copied from class: `Number` Returns the value of the specified number as a double.

This may involve rounding.

Returns

the numeric value represented by this object after conversion to type double.

Implements `decaf::lang::Number` (p. 2283).

6.104.3.5 `float decaf::util::concurrent::atomic::AtomicInteger::floatValue () const [virtual]`

Description copied from class: `Number` Returns the value of the specified number as a float.

This may involve rounding.

Returns

the numeric value represented by this object after conversion to type float.

Implements **decaf::lang::Number** (p. 2283).

6.104.3.6 `int decaf::util::concurrent::atomic::AtomicInteger::get () const`
[inline]

Gets the current value.

Returns

the current value.

6.104.3.7 `int decaf::util::concurrent::atomic::AtomicInteger::getAndAdd (int
delta)`

Atomically adds the given value to the current value.

Parameters

delta - The value to add.

Returns

the previous value.

6.104.3.8 `int decaf::util::concurrent::atomic::AtomicInteger::getAndDecrement ()`

Atomically decrements by one the current value.

Returns

the previous value.

6.104.3.9 `int decaf::util::concurrent::atomic::AtomicInteger::getAndIncrement ()`

Atomically increments by one the current value.

Returns

the previous value.

6.104.3.10 `int decaf::util::concurrent::atomic::AtomicInteger::getAndSet (int
new Value)`

Atomically sets to the given value and returns the old value.

Parameters

new Value - the new value.

Returns

the previous value.

6.104.3.11 `int decaf::util::concurrent::atomic::AtomicInteger::incrementAndGet ()`

Atomically increments by one the current value.

Returns

the updated value.

Referenced by `decaf::lang::AtomicRefCounter::AtomicRefCounter()`.

6.104.3.12 `int decaf::util::concurrent::atomic::AtomicInteger::intValue () const`
[virtual]

Description copied from class: Number Returns the value of the specified number as an int.

This may involve rounding or truncation.

Returns

the numeric value represented by this object after conversion to type int.

Implements **decaf::lang::Number** (p. 2283).

6.104.3.13 `long long decaf::util::concurrent::atomic::AtomicInteger::longValue ()`
`const` [virtual]

Description copied from class: Number Returns the value of the specified number as a long.

This may involve rounding or truncation.

Returns

the numeric value represented by this object after conversion to type long long.

Implements **decaf::lang::Number** (p. 2283).

6.104.3.14 `void decaf::util::concurrent::atomic::AtomicInteger::set (int new Value`
`)` [inline]

Sets to the given value.

Parameters

new Value - the new value

6.104.3.15 std::string decaf::util::concurrent::atomic::AtomicInteger::toString () const

Returns the String representation of the current value.

Returns

the String representation of the current value.

Public Member Functions

- AtomicRefCounter ()
- AtomicRefCounter (const AtomicRefCounter &other)

Protected Member Functions

- void **swap** (**AtomicRefCounter** &other)

Swaps this instance's reference counter with the one given, this allows for copy-and-swap semantics of this object.

- bool **release** ()

Removes a reference to the counter Atomically and returns if the counter has reached zero, once the counter hits zero, the internal counter is destroyed and this instance is now considered to be unreferenced.

6.105.1 Constructor & Destructor Documentation

6.105.1.1 `decaf::lang::AtomicRefCounter::AtomicRefCounter ()` [inline]

6.105.1.2 `decaf::lang::AtomicRefCounter::AtomicRefCounter (const AtomicRefCounter & other)` [inline]

References `decaf::util::concurrent::atomic::AtomicInteger::incrementAndGet()`.

6.105.2 Member Function Documentation

6.105.2.1 `bool decaf::lang::AtomicRefCounter::release ()` [inline, protected]

Removes a reference to the counter Atomically and returns if the counter has reached zero, once the counter hits zero, the internal counter is destroyed and this instance is now considered to be unreferenced.

Returns

true if the count is now zero.

Reimplemented in `decaf::lang::Pointer< commands::ConsumerId >` (p. 2349), `decaf::lang::Pointer< MessageAck >` (p. 2349), `decaf::lang::Pointer< BooleanExpression >` (p. 2349), `decaf::lang::Pointer< BrokerError >` (p. 2349), `decaf::lang::Pointer< Transport >` (p. 2349), `decaf::lang::Pointer< wireformat::WireFormat >` (p. 2349), `decaf::lang::Pointer< CloseTransportsTask >` (p. 2349), `decaf::lang::Pointer< CompositeTaskRunner >` (p. 2349), `decaf::lang::Pointer< commands::WireFormatInfo >` (p. 2349), `decaf::lang::Pointer< ActiveMQTransactionContext >` (p. 2349), `decaf::lang::Pointer< commands::ProducerInfo >` (p. 2349), `decaf::lang::Pointer< Comparator< E > >` (p. 2349), `decaf::lang::Pointer< BrokerId >` (p. 2349), `decaf::lang::Pointer< commands::SessionInfo >` (p. 2349), `decaf::lang::Pointer< Message >` (p. 2349), `decaf::lang::Pointer< URI >` (p. 2349), `decaf::lang::Pointer< DataStructure >` (p. 2349), `decaf::lang::Pointer< commands::ConnectionInfo >` (p. 2349), `decaf::lang::Pointer< activemq::threads::TaskRunner >` (p. 2349), `decaf::lang::Pointer< LockHandle >` (p. 2349), `decaf::lang::Pointer< ConsumerInfo >` (p. 2349), `decaf::lang::Pointer< ConnectionId >` (p. 2349), `decaf::lang::Pointer< decaf::lang::Runnable >` (p. 2349), `decaf::lang::Pointer< BackupTransportPool >` (p. 2349), `decaf::lang::Pointer< commands::BrokerInfo >` (p. 2349), `decaf::lang::Pointer< ProducerInfo >` (p. 2349), `decaf::lang::Pointer< decaf::lang::Thread >` (p. 2349), `decaf::lang::Pointer< MessageId >` (p. 2349),

decaf::lang::Pointer< Response > (p. 2349), decaf::lang::Pointer< SessionId > (p. 2349), decaf::lang::Pointer< cms::Destination > (p. 2349), decaf::lang::Pointer< TransportListener > (p. 2349), decaf::lang::Pointer< commands::TransactionId > (p. 2349), decaf::lang::Pointer< ActiveMQDestination > (p. 2349), decaf::lang::Pointer< ProducerId > (p. 2349), decaf::lang::Pointer< ResponseBuilder > (p. 2349), decaf::lang::Pointer< SessionInfo > (p. 2349), decaf::lang::Pointer< commands::Message > (p. 2349), decaf::lang::Pointer< transport::Transport > (p. 2349), decaf::lang::Pointer< InactivityMonitorData > (p. 2349), decaf::lang::Pointer< Tracked > (p. 2349), decaf::lang::Pointer< ConnectionInfo > (p. 2349), decaf::lang::Pointer< commands::MessageAck > (p. 2349), decaf::lang::Pointer< core::ActiveMQAckHandler > (p. 2349), decaf::lang::Pointer< Exception > (p. 2349), decaf::lang::Pointer< commands::ConsumerInfo > (p. 2349), decaf::lang::Pointer< ConsumerId > (p. 2349), decaf::lang::Pointer< URIPool > (p. 2349), decaf::lang::Pointer< decaf::util::Properties > (p. 2349), and decaf::lang::Pointer< TransactionId > (p. 2349).

References decaf::util::concurrent::atomic::AtomicInteger::decrementAndGet().

6.105.2.2 void decaf::lang::AtomicRefCounter::swap (AtomicRefCounter & *other*) [inline, protected]

Swaps this instance's reference counter with the one given, this allows for copy-and-swap semantics of this object.

Parameters

other The value to swap with this one's.

The documentation for this class was generated from the following file:

- src/main/decaf/lang/Pointer.h

6.106 decaf::util::concurrent::atomic::AtomicReference< T > Class Template Reference

An Pointer reference that may be updated atomically.

```
#include <src/main/decaf/util/concurrent/atomic/AtomicReference.h>
```

Public Member Functions

- **AtomicReference** ()
- **AtomicReference** (T *value)
- virtual ~**AtomicReference** ()
- T * **get** () const
Gets the Current Value.
- void **set** (T *newValue)
Sets the Current value of this Reference.
- bool **compareAndSet** (T *expect, T *update)

Atomically sets the value to the given updated value if the current value == the expected value.

- `T * getAndSet (T *newValue)`
Atomically sets to the given value and returns the old value.
- `std::string toString () const`
Returns the String representation of the current value.

6.106.1 Detailed Description

```
template<typename T> class decaf::util::concurrent::atomic::AtomicReference< T >
```

An Pointer reference that may be updated atomically.

6.106.2 Constructor & Destructor Documentation

6.106.2.1 `template<typename T >
decaf::util::concurrent::atomic::AtomicReference< T
>::AtomicReference () [inline]`

6.106.2.2 `template<typename T >
decaf::util::concurrent::atomic::AtomicReference< T
>::AtomicReference (T * value) [inline]`

6.106.2.3 `template<typename T > virtual
decaf::util::concurrent::atomic::AtomicReference< T
>::~~AtomicReference () [inline, virtual]`

6.106.3 Member Function Documentation

6.106.3.1 `template<typename T > bool
decaf::util::concurrent::atomic::AtomicReference< T
>::compareAndSet (T * expect, T * update) [inline]`

Atomically sets the value to the given updated value if the current value == the expected value.

Parameters

expect - the expected value
update - the new value

Returns

true if successful. False return indicates that the actual value was not equal to the expected value.

6.106.3.2 `template<typename T > T*
decaf::util::concurrent::atomic::AtomicReference< T >::get
() const [inline]`

Gets the Current Value.

Returns

the current value of this Reference.

6.106.3.3 `template<typename T > T*
decaf::util::concurrent::atomic::AtomicReference< T
>::getAndSet (T * new Value) [inline]`

Atomically sets to the given value and returns the old value.

Parameters

new Value- the new value

Returns

the previous value.

6.106.3.4 `template<typename T > void
decaf::util::concurrent::atomic::AtomicReference< T >::set
(T * new Value) [inline]`

Sets the Current value of this Reference.

Parameters

new Value The new Value of this Reference.

6.106.3.5 `template<typename T > std::string
decaf::util::concurrent::atomic::AtomicReference< T
>::toString () const [inline]`

Returns the String representation of the current value.

Returns

string representation of the current value.

The documentation for this class was generated from the following file:

- `src/main/decaf/util/concurrent/atomic/AtomicReference.h`

6.107 activemq::transport::failover::BackupTransport Class Reference

```
#include <src/main/activemq/transport/failover/BackupTransport.h>
```

Inheritance diagram for activemq::transport::failover::BackupTransport:

Public Member Functions

- **BackupTransport** (**BackupTransportPool** *failover)
- virtual **~BackupTransport** ()
- **decaf::net::URI** **getUri** () const
Gets the URI assigned to this Backup.
- void **setUri** (const **decaf::net::URI** &uri)
*Sets the URI assigned to this **Transport** (p. 3066).*
- const **Pointer**< **Transport** > & **getTransport** ()
Gets the currently held transport.
- void **setTransport** (const **Pointer**< **Transport** > &transport)
Sets the held transport, if not NULL then start to listen for exceptions from the held transport.
- virtual void **onException** (const **decaf::lang::Exception** &ex)
Event handler for an exception from a command transport.
- bool **isClosed** () const
*Has the **Transport** (p. 3066) been shutdown and no longer usable.*
- void **setClosed** (bool value)
*Sets the closed flag on this **Transport** (p. 3066).*

6.107.1 Constructor & Destructor Documentation

- 6.107.1.1 **activemq::transport::failover::BackupTransport::BackupTransport** (**BackupTransportPool** * *failover*)
- 6.107.1.2 virtual **activemq::transport::failover::BackupTransport::~~BackupTransport** ()
[virtual]

6.107.2 Member Function Documentation

- 6.107.2.1 const **Pointer**<**Transport**>& **activemq::transport::failover::BackupTransport::getTransport** () [inline]

Gets the currently held transport.

Returns

pointer to the held transport or NULL if not set.

6.107.2.2 `decaf::net::URI activemq::transport::failover::BackupTransport::getUri () const` [inline]

Gets the URI assigned to this Backup.

Returns

the assigned URI

6.107.2.3 `bool activemq::transport::failover::BackupTransport::isClosed () const` [inline]

Has the **Transport** (p. 3066) been shutdown and no longer usable.

Returns

true if the **Transport** (p. 3066)

6.107.2.4 `virtual void activemq::transport::failover::BackupTransport::onException (const decaf::lang::Exception & ex)` [virtual]

Event handler for an exception from a command transport.

The **BackupTransport** (p. 591) closes its internal **Transport** (p. 3066) when an exception is received and returns the URI to the pool of URIs to attempt connections to.

Parameters

ex The exception that was passed to this listener to handle.

Implements **activemq::transport::TransportListener** (p. 3082).

6.107.2.5 `void activemq::transport::failover::BackupTransport::setClosed (bool value)` [inline]

Sets the closed flag on this **Transport** (p. 3066).

Parameters

value - true for closed.

6.107.2.6 `void activemq::transport::failover::BackupTransport::setTransport (const Pointer< Transport > & transport)` [inline]

Sets the held transport, if not NULL then start to listen for exceptions from the held transport.

Parameters

transport The transport to hold.

6.107.2.7 `void activemq::transport::failover::BackupTransport::setUri (const decaf::net::URI & uri) [inline]`

Sets the URI assigned to this **Transport** (p. 3066).

The documentation for this class was generated from the following file:

- `src/main/activemq/transport/failover/BackupTransport.h`

6.108 `activemq::transport::failover::BackupTransportPool` Class Reference

`#include <src/main/activemq/transport/failover/BackupTransportPool.h>`

Inheritance diagram for `activemq::transport::failover::BackupTransportPool`:

Public Member Functions

- **BackupTransportPool** (const **Pointer**< **CompositeTaskRunner** > &taskRunner, const **Pointer**< **CloseTransportsTask** > &closeTask, const **Pointer**< **URIPool** > &uriPool)
- **BackupTransportPool** (int backupPoolSize, const **Pointer**< **CompositeTaskRunner** > &taskRunner, const **Pointer**< **CloseTransportsTask** > &closeTask, const **Pointer**< **URIPool** > &uriPool)
- virtual **~BackupTransportPool** ()
- virtual bool **isPending** () const
Return true if we don't currently have enough Connected Transports.
- **Pointer**< **BackupTransport** > **getBackup** ()
*Get a Connected **Transport** (p. 3066) from the pool of Backups if any are present, otherwise it return a NULL Pointer.*
- virtual bool **iterate** ()
Connect to a Backup Broker if we haven't already connected to the max number of Backups.
- int **getBackupPoolSize** () const
Gets the Max number of Backups this Task will create.
- void **setBackupPoolSize** (int size)
Sets the Max number of Backups this Task will create.
- bool **isEnabled** () const
*Gets if the backup **Transport** (p. 3066) Pool has been enabled or not, when not enabled no backups are created and any that were are destroyed.*
- void **setEnabled** (bool value)
*Sets if this Backup **Transport** (p. 3066) Pool is enabled.*

Friends

- class **BackupTransport**

6.108.1 Constructor & Destructor Documentation

6.108.1.1 `activemq::transport::failover::BackupTransportPool::BackupTransportPool (const Pointer< CompositeTaskRunner > & taskRunner, const Pointer< CloseTransportsTask > & closeTask, const Pointer< URIPool > & uriPool)`

6.108.1.2 `activemq::transport::failover::BackupTransportPool::BackupTransportPool (int backupPoolSize, const Pointer< CompositeTaskRunner > & taskRunner, const Pointer< CloseTransportsTask > & closeTask, const Pointer< URIPool > & uriPool)`

6.108.1.3 `virtual
activemq::transport::failover::BackupTransportPool::~~BackupTransportPool
() [virtual]`

6.108.2 Member Function Documentation

6.108.2.1 `Pointer<BackupTransport> ac-
tivemq::transport::failover::BackupTransportPool::getBackup ()`

Get a Connected **Transport** (p. 3066) from the pool of Backups if any are present, otherwise it return a NULL Pointer.

Returns

Pointer to a Connected **Transport** (p. 3066) or NULL

6.108.2.2 `int ac-
tivemq::transport::failover::BackupTransportPool::getBackupPoolSize () const [inline]`

Gets the Max number of Backups this Task will create.

Returns

the max number of active BackupTransports that will be created.

6.108.2.3 `bool activemq::transport::failover::BackupTransportPool::isEnabled () const [inline]`

Gets if the backup **Transport** (p. 3066) Pool has been enabled or not, when not enabled no backups are created and any that were are destroyed.

Returns

true if enable.

6.108.2.4 `virtual bool activemq::transport::failover::BackupTransportPool::isPending () const` [virtual]

Return true if we don't currently have enough Connected Transports.

Implements `activemq::threads::CompositeTask` (p. 1016).

6.108.2.5 `virtual bool activemq::transport::failover::BackupTransportPool::iterate ()` [virtual]

Connect to a Backup Broker if we haven't already connected to the max number of Backups.

Implements `activemq::threads::Task` (p. 2956).

6.108.2.6 `void activemq::transport::failover::BackupTransportPool::setBackupPoolSize (int size)` [inline]

Sets the Max number of Backups this Task will create.

Parameters

size - the max number of active BackupTransports that will be created.

6.108.2.7 `void activemq::transport::failover::BackupTransportPool::setEnabled (bool value)`

Sets if this Backup **Transport** (p. 3066) Pool is enabled.

When not enabled no Backups are created and any that were are destroyed.

Parameters

value - true to enable backup creation, false to disable.

6.108.3 Friends And Related Function Documentation

6.109.1 Constructor & Destructor Documentation

6.109.1.1 `activemq::commands::BaseCommand::BaseCommand ()` [inline]

6.109.1.2 `virtual activemq::commands::BaseCommand::~~BaseCommand ()`
[inline, virtual]

6.109.2 Member Function Documentation

6.109.2.1 `virtual void activemq::commands::BaseCommand::copyDataStructure (const DataStructure * src)` [inline, virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

`src` - Source Object

Implements `activemq::commands::DataStructure` (p. 1374).

Reimplemented in `activemq::commands::ActiveMQBlobMessage` (p. 143), `activemq::commands::ActiveMQBytesMessage` (p. 170), `activemq::commands::ActiveMQMapMessage` (p. 276), `activemq::commands::ActiveMQMessage` (p. 306), `activemq::commands::ActiveMQObjectMessage` (p. 346), `activemq::commands::ActiveMQStreamMessage` (p. 425), `activemq::commands::ActiveMQTextMessage` (p. 527), `activemq::commands::BrokerError` (p. 687), `activemq::commands::BrokerInfo` (p. 716), `activemq::commands::ConnectionControl` (p. 1057), `activemq::commands::ConnectionError` (p. 1081), `activemq::commands::ConnectionInfo` (p. 1130), `activemq::commands::ConsumerControl` (p. 1167), `activemq::commands::ConsumerInfo` (p. 1217), `activemq::commands::ControlCommand` (p. 1244), `activemq::commands::DataArrayResponse` (p. 1269), `activemq::commands::DataResponse` (p. 1308), `activemq::commands::DestinationInfo` (p. 1392), `activemq::commands::ExceptionResponse` (p. 1485), `activemq::commands::FlushCommand` (p. 1574), `activemq::commands::IntegerResponse` (p. 1668), `activemq::commands::KeepAliveInfo` (p. 1814), `activemq::commands::Message` (p. 2023), `activemq::commands::MessageAck` (p. 2057), `activemq::commands::MessageDispatch` (p. 2085), `activemq::commands::MessageDispatchNotification` (p. 2117), `activemq::commands::MessagePull` (p. 2204), `activemq::commands::ProducerAck` (p. 2422), `activemq::commands::ProducerInfo` (p. 2471), `activemq::commands::RemoveInfo` (p. 2538), `activemq::commands::RemoveSubscriptionInfo` (p. 2562), `activemq::commands::ReplayCommand` (p. 2585), `activemq::commands::Response` (p. 2612), `activemq::commands::SessionInfo` (p. 2703), `activemq::commands::ShutdownInfo` (p. 2758), `activemq::commands::TransactionInfo` (p. 3038), and `activemq::commands::WireFormatInfo` (p. 3156).

References `getCommandId()`, and `isResponseRequired()`.

6.109.2.2 `virtual bool activemq::commands::BaseCommand::equals (const DataStructure * value) const` [inline, virtual]

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Implements **activemq::commands::DataStructure** (p. 1374).

Reimplemented in **activemq::commands::ActiveMQBlobMessage** (p. 144), **activemq::commands::ActiveMQBytesMessage** (p. 171), **activemq::commands::ActiveMQMapMessage** (p. 276), **activemq::commands::ActiveMQMessage** (p. 306), **activemq::commands::ActiveMQMessageTemplate< T >** (p. 331), **activemq::commands::ActiveMQObjectMessage** (p. 346), **activemq::commands::ActiveMQStreamMessage** (p. 426), **activemq::commands::ActiveMQTextMessage** (p. 527), **activemq::commands::BrokerInfo** (p. 716), **activemq::commands::ConnectionControl** (p. 1057), **activemq::commands::ConnectionError** (p. 1081), **activemq::commands::ConnectionInfo** (p. 1131), **activemq::commands::ConsumerControl** (p. 1168), **activemq::commands::ConsumerInfo** (p. 1217), **activemq::commands::ControlCommand** (p. 1245), **activemq::commands::DataArrayResponse** (p. 1269), **activemq::commands::DataResponse** (p. 1309), **activemq::commands::DestinationInfo** (p. 1392), **activemq::commands::ExceptionResponse** (p. 1485), **activemq::commands::FlushCommand** (p. 1574), **activemq::commands::IntegerResponse** (p. 1668), **activemq::commands::KeepAliveInfo** (p. 1814), **activemq::commands::Message** (p. 2023), **activemq::commands::MessageAck** (p. 2057), **activemq::commands::MessageDispatch** (p. 2086), **activemq::commands::MessageDispatchNotification** (p. 2117), **activemq::commands::MessagePull** (p. 2204), **activemq::commands::ProducerAck** (p. 2422), **activemq::commands::ProducerInfo** (p. 2471), **activemq::commands::RemoveInfo** (p. 2538), **activemq::commands::RemoveSubscriptionInfo** (p. 2562), **activemq::commands::ReplayCommand** (p. 2586), **activemq::commands::Response** (p. 2613), **activemq::commands::SessionInfo** (p. 2703), **activemq::commands::ShutdownInfo** (p. 2758), **activemq::commands::TransactionInfo** (p. 3039), **activemq::commands::WireFormatInfo** (p. 3156), **activemq::commands::ActiveMQMessageTemplate< cms::BytesMessage >** (p. 331), **activemq::commands::ActiveMQMessageTemplate< cms::MapMessage >** (p. 331), **activemq::commands::ActiveMQMessageTemplate< cms::Message >** (p. 331), **activemq::commands::ActiveMQMessageTemplate< cms::StreamMessage >** (p. 331), **activemq::commands::ActiveMQMessageTemplate< cms::TextMessage >** (p. 331), and **activemq::commands::ActiveMQMessageTemplate< cms::ObjectMessage >** (p. 331).

References **activemq::commands::BaseDataStructure::equals()**.

6.109.2.3 virtual int activemq::commands::BaseCommand::getCommandId ()
const [inline, virtual]

Gets the **Command** (p. 991) Id of this **Message** (p. 2018).

Returns

Command (p. 991) Id

Implements **activemq::commands::Command** (p. 992).

Referenced by **copyDataStructure()**.

6.109.2.4 `virtual bool activemq::commands::BaseCommand::isBrokerInfo ()`
`const [inline, virtual]`

Implements `activemq::commands::Command` (p. 992).

Reimplemented in `activemq::commands::BrokerInfo` (p. 718).

6.109.2.5 `virtual bool activemq::commands::BaseCommand::isConnectionInfo ()`
`const [inline, virtual]`

Implements `activemq::commands::Command` (p. 992).

Reimplemented in `activemq::commands::ConnectionInfo` (p. 1132).

6.109.2.6 `virtual bool activemq::commands::BaseCommand::isConsumerInfo ()`
`const [inline, virtual]`

Implements `activemq::commands::Command` (p. 992).

Reimplemented in `activemq::commands::ConsumerInfo` (p. 1219).

6.109.2.7 `virtual bool activemq::commands::BaseCommand::isKeepAliveInfo ()`
`const [inline, virtual]`

Implements `activemq::commands::Command` (p. 992).

Reimplemented in `activemq::commands::KeepAliveInfo` (p. 1814).

6.109.2.8 `virtual bool activemq::commands::BaseCommand::isMessage () const`
`[inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::Message` (p. 2030).

6.109.2.9 `virtual bool activemq::commands::BaseCommand::isMessageAck ()`
`const [inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::MessageAck` (p. 2058).

6.109.2.10 `virtual bool activemq::commands::BaseCommand::isMessageDispatch () const`
`[inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::MessageDispatch` (p. 2087).

6.109.2.11 `virtual bool activemq::commands::BaseCommand::isMessageDispatchNotification () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::MessageDispatchNotification` (p. 2118).

6.109.2.12 `virtual bool activemq::commands::BaseCommand::isProducerAck () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::ProducerAck` (p. 2422).

6.109.2.13 `virtual bool activemq::commands::BaseCommand::isProducerInfo () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::ProducerInfo` (p. 2472).

6.109.2.14 `virtual bool activemq::commands::BaseCommand::isRemoveInfo () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::RemoveInfo` (p. 2539).

6.109.2.15 `virtual bool activemq::commands::BaseCommand::isRemoveSubscriptionInfo () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 993).

Reimplemented in `activemq::commands::RemoveSubscriptionInfo` (p. 2563).

6.109.2.16 `virtual bool activemq::commands::BaseCommand::isResponse () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 994).

Reimplemented in `activemq::commands::Response` (p. 2613).

6.109.2.17 `virtual bool activemq::commands::BaseCommand::isResponseRequired () const [inline, virtual]`

Is a **Response** (p. 2611) required for this **Command** (p. 991).

Returns

true if a response is required.

Implements **activemq::commands::Command** (p. 994).

Referenced by `copyDataStructure()`.

6.109.2.18 `virtual bool activemq::commands::BaseCommand::isShutdownInfo ()
const [inline, virtual]`

Implements **activemq::commands::Command** (p. 994).

Reimplemented in **activemq::commands::ShutdownInfo** (p. 2759).

6.109.2.19 `virtual bool activemq::commands::BaseCommand::isTransactionInfo ()
const [inline, virtual]`

Implements **activemq::commands::Command** (p. 994).

Reimplemented in **activemq::commands::TransactionInfo** (p. 3039).

6.109.2.20 `virtual bool activemq::commands::BaseCommand::isWireFormatInfo ()
const [inline, virtual]`

Implements **activemq::commands::Command** (p. 994).

Reimplemented in **activemq::commands::WireFormatInfo** (p. 3159).

6.109.2.21 `virtual void activemq::commands::BaseCommand::setCommandId (int
id) [inline, virtual]`

Sets the **Command** (p. 991) Id of this **Message** (p. 2018).

Parameters

id **Command** (p. 991) Id

Implements **activemq::commands::Command** (p. 994).

6.109.2.22 `virtual void activemq::commands::BaseCommand::setResponseRequired (const bool required) [inline, virtual]`

Set if this **Message** (p. 2018) requires a **Response** (p. 2611).

Parameters

required true if response is required

Implements **activemq::commands::Command** (p. 994).

6.109.2.23 `virtual std::string activemq::commands::BaseCommand::toString ()
const [inline, virtual]`

Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Implements `activemq::commands::Command` (p. 995).

Reimplemented in `activemq::commands::ActiveMQBlobMessage` (p. 146), `activemq::commands::ActiveMQBytesMessage` (p. 177), `activemq::commands::ActiveMQMapMessage` (p. 284), `activemq::commands::ActiveMQMessage` (p. 307), `activemq::commands::ActiveMQObjectMessage` (p. 346), `activemq::commands::ActiveMQStreamMessage` (p. 432), `activemq::commands::ActiveMQTextMessage` (p. 529), `activemq::commands::BrokerInfo` (p. 719), `activemq::commands::ConnectionControl` (p. 1058), `activemq::commands::ConnectionError` (p. 1082), `activemq::commands::ConnectionInfo` (p. 1133), `activemq::commands::ConsumerControl` (p. 1169), `activemq::commands::ConsumerInfo` (p. 1220), `activemq::commands::ControlCommand` (p. 1245), `activemq::commands::DataArrayResponse` (p. 1270), `activemq::commands::DataResponse` (p. 1309), `activemq::commands::DestinationInfo` (p. 1394), `activemq::commands::ExceptionResponse` (p. 1486), `activemq::commands::FlushCommand` (p. 1575), `activemq::commands::IntegerResponse` (p. 1669), `activemq::commands::KeepAliveInfo` (p. 1815), `activemq::commands::Message` (p. 2033), `activemq::commands::MessageAck` (p. 2059), `activemq::commands::MessageDispatch` (p. 2087), `activemq::commands::MessageDispatchNotification` (p. 2119), `activemq::commands::MessagePull` (p. 2206), `activemq::commands::ProducerAck` (p. 2423), `activemq::commands::ProducerInfo` (p. 2473), `activemq::commands::RemoveInfo` (p. 2539), `activemq::commands::RemoveSubscriptionInfo` (p. 2563), `activemq::commands::ReplayCommand` (p. 2586), `activemq::commands::Response` (p. 2614), `activemq::commands::SessionInfo` (p. 2704), `activemq::commands::ShutdownInfo` (p. 2759), `activemq::commands::TransactionInfo` (p. 3040), and `activemq::commands::WireFormatInfo` (p. 3162).

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller`:

Public Member Functions

- `BaseCommandMarshaller ()`
- `virtual ~BaseCommandMarshaller ()`

- virtual void **tightUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual int **tightMarshal1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

6.110.1 Detailed Description

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 603). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.110.2 Constructor & Destructor Documentation

6.110.2.1 **activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::BaseCommandMarshaller** () [inline]

6.110.2.2 **virtual activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::~~BaseCommandMarshaller** () [inline, virtual]

6.110.3 Member Function Documentation

6.110.3.1 **virtual void activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::looseMarshal** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **decaf::io::DataOutputStream** * *dataOut*) throw (**decaf::io::IOException**) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller` (p. 148), `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller` (p. 184), `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller` (p. 286), `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller` (p. 309), `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller` (p. 349), `activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller` (p. 437), `activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller` (p. 531), `activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller` (p. 723), `activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller` (p. 1061), `activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller` (p. 1085), `activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller` (p. 1136), `activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller` (p. 1172), `activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller` (p. 1224), `activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller` (p. 1248), `activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller` (p. 1272), `activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller` (p. 1312), `activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller` (p. 1401), `activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller` (p. 1496), `activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller` (p. 1585), `activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller` (p. 1679), `activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller` (p. 1825), `activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller` (p. 2070), `activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller` (p. 2105), `activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller` (p. 2130), `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176), `activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller` (p. 2213), `activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller` (p. 2429), `activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller` (p. 2480), `activemq::wireformat::openwire::marshal::v3::RemoveInfoMarshaller` (p. 2554), `activemq::wireformat::openwire::marshal::v3::RemoveSubscriptionInfoMarshaller` (p. 2578), `activemq::wireformat::openwire::marshal::v3::ReplayCommandMarshaller` (p. 2593), `activemq::wireformat::openwire::marshal::v3::ResponseMarshaller` (p. 2626), `activemq::wireformat::openwire::marshal::v3::SessionInfoMarshaller` (p. 2723), `activemq::wireformat::openwire::marshal::v3::ShutdownInfoMarshaller` (p. 2769), and `activemq::wireformat::openwire::marshal::v3::TransactionInfoMarshaller` (p. 3046).

6.110.3.2 virtual void `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::looseUnmarshal` (`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`, `decaf::io::DataInputStream * dataIn`) throw (`decaf::io::IOException`) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller` (p. 149), `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller` (p. 184), `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller` (p. 287), `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller` (p. 309), `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller` (p. 349), `activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller` (p. 438), `activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller` (p. 532), `activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller` (p. 724), `activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller` (p. 1062), `activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller` (p. 1085), `activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller` (p. 1137), `activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller` (p. 1173), `activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller` (p. 1225), `activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller` (p. 1248), `activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller` (p. 1273), `activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller` (p. 1312), `activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller` (p. 1401), `activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller` (p. 1497), `activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller` (p. 1586), `activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller` (p. 1680), `activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller` (p. 1826), `activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller` (p. 2070), `activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller` (p. 2106), `activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller` (p. 2130), `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2176), `activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller` (p. 2213), `activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller` (p. 2430), `activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller` (p. 2480), `activemq::wireformat::openwire::marshal::v3::RemoveInfoMarshaller` (p. 2554), `activemq::wireformat::openwire::marshal::v3::RemoveSubscriptionInfoMarshaller` (p. 2578), `activemq::wireformat::openwire::marshal::v3::ReplayCommandMarshaller` (p. 2593), `activemq::wireformat::openwire::marshal::v3::ResponseMarshaller` (p. 2626), `activemq::wireformat::openwire::marshal::v3::SessionInfoMarshaller` (p. 2723), `activemq::wireformat::openwire::marshal::v3::ShutdownInfoMarshaller` (p. 2770), and `activemq::wireformat::openwire::marshal::v3::TransactionInfoMarshaller` (p. 3047).

```
6.110.3.3 virtual int ac-
    tivemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::tightMarshal1
    ( OpenWireFormat * wireFormat, commands::DataStructure
    * dataStructure, utils::BooleanStream * bs ) throw (
    decaf::io::IOException ) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller` (p. 149), `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller` (p. 184), `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller` (p. 287), `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller` (p. 309), `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller` (p. 349), `activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller` (p. 438), `activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller` (p. 532), `activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller` (p. 724), `activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller` (p. 1062), `activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller` (p. 1086), `activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller` (p. 1137), `activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller` (p. 1173), `activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller` (p. 1225), `activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller` (p. 1249), `activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller` (p. 1273), `activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller` (p. 1312), `activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller` (p. 1402), `activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller` (p. 1497), `activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller` (p. 1586), `activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller` (p. 1680), `activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller` (p. 1826), `activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller` (p. 2070), `activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller` (p. 2106), `activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller` (p. 2130), `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2177), `activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller` (p. 2213), `activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller` (p. 2430), `activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller` (p. 2480), `activemq::wireformat::openwire::marshal::v3::RemoveInfoMarshaller` (p. 2554), `activemq::wireformat::openwire::marshal::v3::RemoveSubscriptionInfoMarshaller` (p. 2578), `activemq::wireformat::openwire::marshal::v3::ReplayCommandMarshaller` (p. 2593), `activemq::wireformat::openwire::marshal::v3::ResponseMarshaller` (p. 2627), `activemq::wireformat::openwire::marshal::v3::SessionInfoMarshaller` (p. 2723), `activemq::wireformat::openwire::marshal::v3::ShutdownInfoMarshaller` (p. 2770), and `activemq::wireformat::openwire::marshal::v3::TransactionInfoMarshaller` (p. 3047).

```

6.110.3.4 virtual void ac-
tivismq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller` (p. 149), `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller` (p. 185), `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller` (p. 287), `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller` (p. 310), `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller` (p. 350), `activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller` (p. 439), `activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller` (p. 532), `activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller` (p. 724), `activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller` (p. 1062), `activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller` (p. 1086), `activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller` (p. 1137), `activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller` (p. 1173), `activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller` (p. 1226), `activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller` (p. 1249), `activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller` (p. 1274), `activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller` (p. 1313), `activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller` (p. 1402), `activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller` (p. 1498), `activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller` (p. 1586), `activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller` (p. 1681), `activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller` (p. 1826), `activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller` (p. 2071), `activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller` (p. 2106), `activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller` (p. 2131), `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2178), `activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller` (p. 2214), `activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller` (p. 2430), `activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller` (p. 2481), `activemq::wireformat::openwire::marshal::v3::RemoveInfoMarshaller` (p. 2555), `activemq::wireformat::openwire::marshal::v3::RemoveSubscriptionInfoMarshaller` (p. 2579), `activemq::wireformat::openwire::marshal::v3::ReplayCommandMarshaller` (p. 2594), `activemq::wireformat::openwire::marshal::v3::ResponseMarshaller` (p. 2627),

activemq::wireformat::openwire::marshal::v3::SessionInfoMarshaller (p. 2724), activemq::wireformat::openwire::marshal::v3::ShutdownInfoMarshaller (p. 2770), and activemq::wireformat::openwire::marshal::v3::TransactionInfoMarshaller (p. 3047).

6.110.3.5 virtual void activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Implements activemq::wireformat::openwire::marshal::DataStreamMarshaller (p. 1366).

Reimplemented in activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller (p. 150), activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller (p. 185), activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller (p. 288), activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller (p. 310), activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller (p. 350), activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller (p. 439), activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller (p. 533), activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller (p. 725), activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller (p. 1063), activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller (p. 1087), activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller (p. 1138), activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller (p. 1174), activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller (p. 1226), activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller (p. 1250), activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller (p. 1274), activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller (p. 1313), activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller (p. 1402), activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller (p. 1498), activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller (p. 1587), activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller (p. 1681), activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller (p. 1827), activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller (p. 2071), activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller (p. 2107), activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller (p. 2131), activemq::wireformat::openwire::marshal::v3::MessageMarshaller (p. 2178), activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller (p. 2214), activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller (p. 2431), activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller (p. 2481),

Write a object instance to data output stream.

6.111.1 Detailed Description

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 610). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.111.2 Constructor & Destructor Documentation

6.111.2.1 `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::BaseCommandMarshaller ()` [inline]

6.111.2.2 `virtual activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::~~BaseCommandMarshaller ()` [inline, virtual]

6.111.3 Member Function Documentation

6.111.3.1 `virtual void activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryWriter that provides that data sink

Exceptions

- IOException* if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller` (p. 152), `activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller` (p. 188), `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller` (p. 290), `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller` (p. 313), `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller` (p. 353), `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller` (p. 441), `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller` (p. 535), `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller` (p. 727), `activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller` (p. 1065), `activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller` (p. 1089), `activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller` (p. 1144), `activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller` (p. 1180), `activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller` (p. 1228), `activemq::wireformat::openwire::marshal::v1::ControlCommandMarshaller` (p. 1256), `activemq::wireformat::openwire::marshal::v1::DataArrayResponseMarshaller` (p. 1280), `activemq::wireformat::openwire::marshal::v1::DataResponseMarshaller` (p. 1316),

activemq::wireformat::openwire::marshal::v1::DestinationInfoMarshaller (p. 1409),
 activemq::wireformat::openwire::marshal::v1::ExceptionResponseMarshaller (p. 1492),
 activemq::wireformat::openwire::marshal::v1::FlushCommandMarshaller (p. 1581),
 activemq::wireformat::openwire::marshal::v1::IntegerResponseMarshaller (p. 1675),
 activemq::wireformat::openwire::marshal::v1::KeepAliveInfoMarshaller (p. 1833),
 activemq::wireformat::openwire::marshal::v1::MessageAckMarshaller (p. 2078),

 activemq::wireformat::openwire::marshal::v1::RemoveSubscriptionInfoMarshaller
 (p. 2574), activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller
 (p. 2605), activemq::wireformat::openwire::marshal::v1::ResponseMarshaller (p. 2635),
 activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller (p. 2711),
 activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller (p. 2761), and
 activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller (p. 3050).

6.111.3.2 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::looseUnmarshal
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn) throw (
decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1348).

Reimplemented in **activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller**
 (p. 153), **activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller**
 (p. 188), **activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller**
 (p. 291), **activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller**
 (p. 313), **activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller**
 (p. 353), **activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller**
 (p. 442), **activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller**

 (p. 2574), activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller
 (p. 2605), activemq::wireformat::openwire::marshal::v1::ResponseMarshaller (p. 2635),
 activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller (p. 2711),
 activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller (p. 2762), and
 activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller (p. 3051).

6.111.3.3 virtual int `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::tightMarshal1`
 (`OpenWireFormat * wireFormat`, `commands::DataStructure`
 * `dataStructure`, `utils::BooleanStream * bs`) throw (`decaf::io::IOException`) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller`
 (p. 153), `activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller`
 (p. 188), `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller`
 (p. 291), `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller`
 (p. 313), `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller`
 (p. 353), `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller`
 (p. 442), `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller`
 (p. 536), `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller` (p. 728),
`activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller` (p. 1066),

activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller (p. 1090),
 activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller (p. 1145),
 activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller (p. 1181),
 activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller (p. 1229),

 activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller (p. 2762), and
 activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller (p. 3051).

6.111.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::tightMarshal2
(OpenWireFormat * *wireFormat*, commands::DataStructure
*** *dataStructure*, decaf::io::DataOutputStream * *dataOut*,**
utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1360).

Reimplemented in **activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller**
 (p. 153), **activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller**
 (p. 189), **activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller**
 (p. 291), **activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller**
 (p. 314), **activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller**

(p. 354), `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller` (p. 442), `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller` (p. 536), `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller` (p. 728), `activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller` (p. 1066), `activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller` (p. 1090), `activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller` (p. 1145), `activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller` (p. 1181), `activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller` (p. 1229), `activemq::wireformat::openwire::marshal::v1::ControlCommandMarshaller` (p. 1257), `activemq::wireformat::openwire::marshal::v1::DataArrayResponseMarshaller` (p. 1282), `activemq::wireformat::openwire::marshal::v1::DataResponseMarshaller` (p. 1317), `activemq::wireformat::openwire::marshal::v1::DestinationInfoMarshaller` (p. 1410), `activemq::wireformat::openwire::marshal::v1::ExceptionResponseMarshaller` (p. 1494), `activemq::wireformat::openwire::marshal::v1::FlushCommandMarshaller` (p. 1582), `activemq::wireformat::openwire::marshal::v1::IntegerResponseMarshaller` (p. 1677), `activemq::wireformat::openwire::marshal::v1::KeepAliveInfoMarshaller` (p. 1834), `activemq::wireformat::openwire::marshal::v1::MessageAckMarshaller` (p. 2079), `activemq::wireformat::openwire::marshal::v1::MessageDispatchMarshaller` (p. 2110), `activemq::wireformat::openwire::marshal::v1::MessageDispatchNotificationMarshaller` (p. 2135), `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186), `activemq::wireformat::openwire::marshal::v1::MessagePullMarshaller` (p. 2218), `activemq::wireformat::openwire::marshal::v1::ProducerAckMarshaller` (p. 2442), `activemq::wireformat::openwire::marshal::v1::ProducerInfoMarshaller` (p. 2493), `activemq::wireformat::openwire::marshal::v1::RemoveInfoMarshaller` (p. 2543), `activemq::wireformat::openwire::marshal::v1::RemoveSubscriptionInfoMarshaller` (p. 2575), `activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller` (p. 2606), `activemq::wireformat::openwire::marshal::v1::ResponseMarshaller` (p. 2636), `activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller` (p. 2712), `activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller` (p. 2762), and `activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller` (p. 3051).

6.111.3.5 `virtual void activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller` (p. 154), `activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller`

(p. 189), `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller` (p. 292), `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller` (p. 314), `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller` (p. 354), `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller` (p. 443), `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller` (p. 537), `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller` (p. 729), `activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller` (p. 1067), `activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller` (p. 1090), `activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller` (p. 1146), `activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller` (p. 1182), `activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller` (p. 1230), `activemq::wireformat::openwire::marshal::v1::ControlCommandMarshaller` (p. 1257), `activemq::wireformat::openwire::marshal::v1::DataArrayResponseMarshaller` (p. 1282), `activemq::wireformat::openwire::marshal::v1::DataResponseMarshaller` (p. 1317), `activemq::wireformat::openwire::marshal::v1::DestinationInfoMarshaller` (p. 1410), `activemq::wireformat::openwire::marshal::v1::ExceptionResponseMarshaller` (p. 1494), `activemq::wireformat::openwire::marshal::v1::FlushCommandMarshaller` (p. 1583), `activemq::wireformat::openwire::marshal::v1::IntegerResponseMarshaller` (p. 1677), `activemq::wireformat::openwire::marshal::v1::KeepAliveInfoMarshaller` (p. 1835), `activemq::wireformat::openwire::marshal::v1::MessageAckMarshaller` (p. 2079), `activemq::wireformat::openwire::marshal::v1::MessageDispatchMarshaller` (p. 2111), `activemq::wireformat::openwire::marshal::v1::MessageDispatchNotificationMarshaller` (p. 2135), `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2186), `activemq::wireformat::openwire::marshal::v1::MessagePullMarshaller` (p. 2218), `activemq::wireformat::openwire::marshal::v1::ProducerAckMarshaller` (p. 2443), `activemq::wireformat::openwire::marshal::v1::ProducerInfoMarshaller` (p. 2493), `activemq::wireformat::openwire::marshal::v1::RemoveInfoMarshaller` (p. 2543), `activemq::wireformat::openwire::marshal::v1::RemoveSubscriptionInfoMarshaller` (p. 2575), `activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller` (p. 2606), `activemq::wireformat::openwire::marshal::v1::ResponseMarshaller` (p. 2637), `activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller` (p. 2712), `activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller` (p. 2763), and `activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller` (p. 3052).

6.112.2.2 virtual activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::~~BaseCommandMarshaller () [inline, virtual]

6.112.3 Member Function Documentation

6.112.3.1 virtual void activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::looseMarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller` (p. 156), `activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller` (p. 192), `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller` (p. 294), `activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller` (p. 317), `activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller` (p. 357), `activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller` (p. 445), `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller` (p. 539), `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller` (p. 731), `activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller` (p. 1069), `activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller` (p. 1093), `activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller` (p. 1140), `activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller` (p. 1176), `activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller` (p. 1232), `activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller` (p. 1252), `activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller` (p. 1276), `activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller` (p. 1324), `activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller` (p. 1405), `activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller` (p. 1500), `activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller` (p. 1589), `activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller` (p. 1683), `activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller` (p. 1829), `activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller` (p. 2074), `activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller` (p. 2101), `activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller` (p. 2126), `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172), `activemq::wireformat::openwire::marshal::v4::MessagePullMarshaller` (p. 2225), `activemq::wireformat::openwire::marshal::v4::ProducerAckMarshaller` (p. 2433), `activemq::wireformat::openwire::marshal::v4::ProducerInfoMarshaller` (p. 2488), `activemq::wireformat::openwire::marshal::v4::RemoveInfoMarshaller` (p. 2558), `activemq::wireformat::openwire::marshal::v4::RemoveSubscriptionInfoMarshaller` (p. 2582), `activemq::wireformat::openwire::marshal::v4::ReplayCommandMarshaller` (p. 2601), `activemq::wireformat::openwire::marshal::v4::ResponseMarshaller` (p. 2639), `activemq::wireformat::openwire::marshal::v4::SessionInfoMarshaller` (p. 2715), `activemq::wireformat::openwire::marshal::v4::ShutdownInfoMarshaller` (p. 2765), and `activemq::wireformat::openwire::marshal::v4::TransactionInfoMarshaller` (p. 3054).

6.112.3.2 virtual void `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::looseUnmarshal` (`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`, `decaf::io::DataInputStream * dataIn`) throw (`decaf::io::IOException`) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller` (p. 157), `activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller` (p. 192), `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller` (p. 295), `activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller` (p. 317), `activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller` (p. 357), `activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller` (p. 446), `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller` (p. 540), `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller` (p. 732), `activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller` (p. 1070), `activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller` (p. 1093), `activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller` (p. 1141), `activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller` (p. 1177), `activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller` (p. 1233), `activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller` (p. 1252), `activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller` (p. 1277), `activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller` (p. 1324), `activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller` (p. 1405), `activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller` (p. 1501), `activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller` (p. 1590), `activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller` (p. 1684), `activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller` (p. 1830), `activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller` (p. 2074), `activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller` (p. 2102), `activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller` (p. 2126), `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2172), `activemq::wireformat::openwire::marshal::v4::MessagePullMarshaller` (p. 2225), `activemq::wireformat::openwire::marshal::v4::ProducerAckMarshaller` (p. 2434), `activemq::wireformat::openwire::marshal::v4::ProducerInfoMarshaller` (p. 2488), `activemq::wireformat::openwire::marshal::v4::RemoveInfoMarshaller` (p. 2558), `activemq::wireformat::openwire::marshal::v4::RemoveSubscriptionInfoMarshaller` (p. 2582), `activemq::wireformat::openwire::marshal::v4::ReplayCommandMarshaller` (p. 2601), `activemq::wireformat::openwire::marshal::v4::ResponseMarshaller` (p. 2640), `activemq::wireformat::openwire::marshal::v4::SessionInfoMarshaller` (p. 2715), `activemq::wireformat::openwire::marshal::v4::ShutdownInfoMarshaller` (p. 2766), and `activemq::wireformat::openwire::marshal::v4::TransactionInfoMarshaller` (p. 3055).

6.112.3.3 virtual int `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::tightMarshal1`
(`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`, `utils::BooleanStream * bs`) throw (`decaf::io::IOException`) [virtual]

Write the booleans that this object uses to a `BooleanStream`.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller` (p. 157), `activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller` (p. 192), `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller` (p. 295), `activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller` (p. 317), `activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller` (p. 357), `activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller` (p. 446), `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller` (p. 540), `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller` (p. 732), `activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller` (p. 1070), `activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller` (p. 1093), `activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller` (p. 1141), `activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller` (p. 1177), `activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller` (p. 1233), `activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller` (p. 1253), `activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller` (p. 1277), `activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller` (p. 1324), `activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller` (p. 1405), `activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller` (p. 1501), `activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller` (p. 1590), `activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller` (p. 1684), `activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller` (p. 1830), `activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller` (p. 2074), `activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller` (p. 2102), `activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller` (p. 2126), `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2173), `activemq::wireformat::openwire::marshal::v4::MessagePullMarshaller` (p. 2225), `activemq::wireformat::openwire::marshal::v4::ProducerAckMarshaller` (p. 2434), `activemq::wireformat::openwire::marshal::v4::ProducerInfoMarshaller` (p. 2488), `activemq::wireformat::openwire::marshal::v4::RemoveInfoMarshaller` (p. 2558), `activemq::wireformat::openwire::marshal::v4::RemoveSubscriptionInfoMarshaller` (p. 2582), `activemq::wireformat::openwire::marshal::v4::ReplayCommandMarshaller` (p. 2601), `activemq::wireformat::openwire::marshal::v4::ResponseMarshaller` (p. 2640), `activemq::wireformat::openwire::marshal::v4::SessionInfoMarshaller` (p. 2715), `activemq::wireformat::openwire::marshal::v4::ShutdownInfoMarshaller` (p. 2766), and `activemq::wireformat::openwire::marshal::v4::TransactionInfoMarshaller` (p. 3055).

6.112.3.4 virtual void activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller` (p. 157), `activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller` (p. 193), `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller` (p. 295), `activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller` (p. 318), `activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller` (p. 358), `activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller` (p. 446), `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller` (p. 540), `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller` (p. 732), `activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller` (p. 1070), `activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller` (p. 1094), `activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller` (p. 1141), `activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller` (p. 1177), `activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller` (p. 1233), `activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller` (p. 1253), `activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller` (p. 1278), `activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller` (p. 1325), `activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller` (p. 1406), `activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller` (p. 1502), `activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller` (p. 1590), `activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller` (p. 1685), `activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller` (p. 1830), `activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller` (p. 2075), `activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller` (p. 2102), `activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller` (p. 2127), `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174), `activemq::wireformat::openwire::marshal::v4::MessagePullMarshaller` (p. 2226), `activemq::wireformat::openwire::marshal::v4::ProducerAckMarshaller` (p. 2434), `activemq::wireformat::openwire::marshal::v4::ProducerInfoMarshaller` (p. 2489), `activemq::wireformat::openwire::marshal::v4::RemoveInfoMarshaller` (p. 2559), `activemq::wireformat::openwire::marshal::v4::RemoveSubscriptionInfoMarshaller` (p. 2583), `activemq::wireformat::openwire::marshal::v4::ReplayCommandMarshaller` (p. 2602), `activemq::wireformat::openwire::marshal::v4::ResponseMarshaller` (p. 2641),

`activemq::wireformat::openwire::marshal::v4::SessionInfoMarshaller` (p. 2716), `activemq::wireformat::openwire::marshal::v4::ShutdownInfoMarshaller` (p. 2766), and `activemq::wireformat::openwire::marshal::v4::TransactionInfoMarshaller` (p. 3055).

6.112.3.5 virtual void `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::tightUnmarshal` (`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`, `decaf::io::DataInputStream * dataIn`, `utils::BooleanStream * bs`) throw (`decaf::io::IOException`) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller` (p. 158), `activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller` (p. 193), `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller` (p. 296), `activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller` (p. 318), `activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller` (p. 358), `activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller` (p. 447), `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller` (p. 541), `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller` (p. 733), `activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller` (p. 1071), `activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller` (p. 1094), `activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller` (p. 1142), `activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller` (p. 1178), `activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller` (p. 1234), `activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller` (p. 1253), `activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller` (p. 1278), `activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller` (p. 1325), `activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller` (p. 1406), `activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller` (p. 1502), `activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller` (p. 1591), `activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller` (p. 1685), `activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller` (p. 1831), `activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller` (p. 2075), `activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller` (p. 2103), `activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller` (p. 2127), `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2174), `activemq::wireformat::openwire::marshal::v4::MessagePullMarshaller` (p. 2226), `activemq::wireformat::openwire::marshal::v4::ProducerAckMarshaller` (p. 2435), `activemq::wireformat::openwire::marshal::v4::ProducerInfoMarshaller` (p. 2489),

6.113.1 Detailed Description

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 623). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.113.2 Constructor & Destructor Documentation

6.113.2.1 `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::BaseCommandMarshaller ()` [inline]

6.113.2.2 `virtual activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::~~BaseCommandMarshaller ()` [inline, virtual]

6.113.3 Member Function Documentation

6.113.3.1 `virtual void activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller` (p. 160), `activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller` (p. 196), `activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller` (p. 298), `activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller` (p. 321), `activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller` (p. 361), `activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller` (p. 449), `activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller` (p. 543), `activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller` (p. 735), `activemq::wireformat::openwire::marshal::v5::ConnectionControlMarshaller` (p. 1073), `activemq::wireformat::openwire::marshal::v5::ConnectionErrorMarshaller` (p. 1097), `activemq::wireformat::openwire::marshal::v5::ConnectionInfoMarshaller` (p. 1148), `activemq::wireformat::openwire::marshal::v5::ConsumerControlMarshaller` (p. 1184), `activemq::wireformat::openwire::marshal::v5::ConsumerInfoMarshaller` (p. 1236), `activemq::wireformat::openwire::marshal::v5::ControlCommandMarshaller` (p. 1260), `activemq::wireformat::openwire::marshal::v5::DataArrayResponseMarshaller` (p. 1284), `activemq::wireformat::openwire::marshal::v5::DataResponseMarshaller` (p. 1320),

6.113.3.2 virtual void `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::looseUnmarshal`
 (`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`,
`decaf::io::DataInputStream * dataIn`) throw (`decaf::io::IOException`) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller`

6.113.3.3 virtual int activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::tightMarshal1
 (**OpenWireFormat** * *wireFormat*, **commands::DataStructure**
 * *dataStructure*, **utils::BooleanStream** * *bs*) throw (**decaf::io::IOException**) [virtual]

Write the booleans that this object uses to a **BooleanStream**.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - **BooleanStream** stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1354).

Reimplemented in **activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller** (p. 161), **activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller** (p. 196), **activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller** (p. 299), **activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller** (p. 321), **activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller** (p. 361), **activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller** (p. 450), **activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller** (p. 544), **activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller** (p. 736), **activemq::wireformat::openwire::marshal::v5::ConnectionControlMarshaller** (p. 1074),

6.113.3.4 virtual void `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::tightMarshal2`
 (`OpenWireFormat * wireFormat`, `commands::DataStructure`
 * `dataStructure`, `decaf::io::DataOutputStream * dataOut`,
`utils::BooleanStream * bs`) throw (`decaf::io::IOException`) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller`
 (p. 161), `activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller`
 (p. 197), `activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller`

6.113.3.5 `virtual void activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller` (p. 162), `activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller`

(p. 197), [activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller](#) (p. 300), [activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller](#) (p. 322), [activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller](#) (p. 362), [activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller](#) (p. 451), [activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller](#) (p. 545), [activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller](#) (p. 737), [activemq::wireformat::openwire::marshal::v5::ConnectionControlMarshaller](#) (p. 1075), [activemq::wireformat::openwire::marshal::v5::ConnectionErrorMarshaller](#) (p. 1098), [activemq::wireformat::openwire::marshal::v5::ConnectionInfoMarshaller](#) (p. 1150), [activemq::wireformat::openwire::marshal::v5::ConsumerControlMarshaller](#) (p. 1186), [activemq::wireformat::openwire::marshal::v5::ConsumerInfoMarshaller](#) (p. 1238), [activemq::wireformat::openwire::marshal::v5::ControlCommandMarshaller](#) (p. 1261), [activemq::wireformat::openwire::marshal::v5::DataArrayResponseMarshaller](#) (p. 1286), [activemq::wireformat::openwire::marshal::v5::DataResponseMarshaller](#) (p. 1321), [activemq::wireformat::openwire::marshal::v5::DestinationInfoMarshaller](#) (p. 1414), [activemq::wireformat::openwire::marshal::v5::ExceptionResponseMarshaller](#) (p. 1506), [activemq::wireformat::openwire::marshal::v5::FlushCommandMarshaller](#) (p. 1595), [activemq::wireformat::openwire::marshal::v5::IntegerResponseMarshaller](#) (p. 1689), [activemq::wireformat::openwire::marshal::v5::KeepAliveInfoMarshaller](#) (p. 1823), [activemq::wireformat::openwire::marshal::v5::MessageAckMarshaller](#) (p. 2067), [activemq::wireformat::openwire::marshal::v5::MessageDispatchMarshaller](#) (p. 2115), [activemq::wireformat::openwire::marshal::v5::MessageDispatchNotificationMarshaller](#) (p. 2139), [activemq::wireformat::openwire::marshal::v5::MessageMarshaller](#) (p. 2182), [activemq::wireformat::openwire::marshal::v5::MessagePullMarshaller](#) (p. 2222), [activemq::wireformat::openwire::marshal::v5::ProducerAckMarshaller](#) (p. 2439), [activemq::wireformat::openwire::marshal::v5::ProducerInfoMarshaller](#) (p. 2485), [activemq::wireformat::openwire::marshal::v5::RemoveInfoMarshaller](#) (p. 2547), [activemq::wireformat::openwire::marshal::v5::RemoveSubscriptionInfoMarshaller](#) (p. 2567), [activemq::wireformat::openwire::marshal::v5::ReplayCommandMarshaller](#) (p. 2598), [activemq::wireformat::openwire::marshal::v5::ResponseMarshaller](#) (p. 2632), [activemq::wireformat::openwire::marshal::v5::SessionInfoMarshaller](#) (p. 2720), [activemq::wireformat::openwire::marshal::v5::ShutdownInfoMarshaller](#) (p. 2779), and [activemq::wireformat::openwire::marshal::v5::TransactionInfoMarshaller](#) (p. 3044).

6.114.3.1 **virtual void** **activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::looseMarshal**
(**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **decaf::io::DataOutputStream** * *dataOut*) throw (**decaf::io::IOException**) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller` (p. 164), `activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller` (p. 200), `activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller` (p. 302), `activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller` (p. 325), `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller` (p. 365), `activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller` (p. 453), `activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller` (p. 547), `activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller` (p. 739), `activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller` (p. 1077), `activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller` (p. 1101), `activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller` (p. 1152), `activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller` (p. 1188), `activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller` (p. 1240), `activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller` (p. 1264), `activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller` (p. 1288), `activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller` (p. 1328), `activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller` (p. 1397), `activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller` (p. 1488), `activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller` (p. 1577), `activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller` (p. 1671), `activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller` (p. 1817), `activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller` (p. 2062), `activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller` (p. 2097), `activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller` (p. 2122), `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2167), `activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller` (p. 2209), `activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller` (p. 2425), `activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller` (p. 2476), `activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller` (p. 2550), `activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller` (p. 2570), `activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller` (p. 2589), `activemq::wireformat::openwire::marshal::v2::ResponseMarshaller` (p. 2621), `activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller` (p. 2707), `activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller` (p. 2773), and `activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller` (p. 3058).

6.114.3.2 virtual void `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::looseUnmarshal` (`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`, `decaf::io::DataInputStream * dataIn`) throw (`decaf::io::IOException`) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller` (p. 165), `activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller` (p. 200), `activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller` (p. 303), `activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller` (p. 325), `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller` (p. 365), `activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller` (p. 454), `activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller` (p. 548), `activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller` (p. 740), `activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller` (p. 1078), `activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller` (p. 1101), `activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller` (p. 1153), `activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller` (p. 1189), `activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller` (p. 1241), `activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller` (p. 1264), `activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller` (p. 1289), `activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller` (p. 1328), `activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller` (p. 1397), `activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller` (p. 1489), `activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller` (p. 1578), `activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller` (p. 1672), `activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller` (p. 1818), `activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller` (p. 2062), `activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller` (p. 2098), `activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller` (p. 2122), `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2168), `activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller` (p. 2209), `activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller` (p. 2426), `activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller` (p. 2476), `activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller` (p. 2550), `activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller` (p. 2570), `activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller` (p. 2589), `activemq::wireformat::openwire::marshal::v2::ResponseMarshaller` (p. 2622), `activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller` (p. 2707), `activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller` (p. 2774), and `activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller` (p. 3059).

```
6.114.3.3 virtual int ac-
    tivemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::tightMarshal1
    ( OpenWireFormat * wireFormat, commands::DataStructure
    * dataStructure, utils::BooleanStream * bs ) throw (
    decaf::io::IOException ) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

- IOException* if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller` (p. 165), `activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller` (p. 200), `activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller` (p. 303), `activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller` (p. 325), `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller` (p. 365), `activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller` (p. 454), `activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller` (p. 548), `activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller` (p. 740), `activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller` (p. 1078), `activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller` (p. 1101), `activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller` (p. 1153), `activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller` (p. 1189), `activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller` (p. 1241), `activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller` (p. 1264), `activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller` (p. 1289), `activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller` (p. 1328), `activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller` (p. 1398), `activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller` (p. 1489), `activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller` (p. 1578), `activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller` (p. 1672), `activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller` (p. 1818), `activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller` (p. 2063), `activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller` (p. 2098), `activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller` (p. 2123), `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169), `activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller` (p. 2210), `activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller` (p. 2426), `activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller` (p. 2476), `activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller` (p. 2550), `activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller` (p. 2570), `activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller` (p. 2590), `activemq::wireformat::openwire::marshal::v2::ResponseMarshaller` (p. 2622), `activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller` (p. 2707), `activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller` (p. 2774), and `activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller` (p. 3059).

```

6.114.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller` (p. 165), `activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller` (p. 201), `activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller` (p. 303), `activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller` (p. 326), `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller` (p. 366), `activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller` (p. 454), `activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller` (p. 548), `activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller` (p. 740), `activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller` (p. 1078), `activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller` (p. 1102), `activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller` (p. 1153), `activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller` (p. 1189), `activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller` (p. 1241), `activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller` (p. 1265), `activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller` (p. 1290), `activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller` (p. 1329), `activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller` (p. 1398), `activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller` (p. 1490), `activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller` (p. 1579), `activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller` (p. 1673), `activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller` (p. 1818), `activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller` (p. 2063), `activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller` (p. 2098), `activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller` (p. 2123), `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2169), `activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller` (p. 2210), `activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller` (p. 2426), `activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller` (p. 2477), `activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller` (p. 2551), `activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller` (p. 2571), `activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller` (p. 2590), `activemq::wireformat::openwire::marshal::v2::ResponseMarshaller` (p. 2623),

activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller (p. 2708), activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller (p. 2774), and activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller (p. 3059).

6.114.3.5 virtual void activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Implements activemq::wireformat::openwire::marshal::DataStreamMarshaller (p. 1366).

Reimplemented in activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller (p. 166), activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller (p. 201), activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller (p. 304), activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller (p. 326), activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller (p. 366), activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller (p. 455), activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller (p. 549), activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller (p. 741), activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller (p. 1079), activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller (p. 1102), activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller (p. 1154), activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller (p. 1190), activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller (p. 1242), activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller (p. 1265), activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller (p. 1290), activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller (p. 1329), activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller (p. 1399), activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller (p. 1490), activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller (p. 1579), activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller (p. 1673), activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller (p. 1819), activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller (p. 2063), activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller (p. 2099), activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller (p. 2123), activemq::wireformat::openwire::marshal::v2::MessageMarshaller (p. 2170), activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller (p. 2210), activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller (p. 2427), activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller (p. 2477),

`activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller` (p. 2551), `activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller` (p. 2571), `activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller` (p. 2590), `activemq::wireformat::openwire::marshal::v2::ResponseMarshaller` (p. 2623), `activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller` (p. 2708), `activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller` (p. 2775), and `activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller` (p. 3060).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/BaseCommandMarshaller.h`

6.115 `activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller` Class Reference

Base class for all Marshallers that marshal DataStructures to and from the wire using the Open-Wire protocol.

```
#include <src/main/activemq/wireformat/openwire/marshal/BaseDataStreamMarshaller.h>
```

Inherits `activemq::wireformat::openwire::marshal::DataStreamMarshaller`.

Public Member Functions

- virtual `~BaseDataStreamMarshaller()`
- virtual `int tightMarshal (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, utils::BooleanStream *bs AMQCPP_UNUSED) throw (decaf::io::IOException)`
Tight Marshal to the given stream.
- virtual `void tightMarshal2 (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, decaf::io::DataOutputStream *ds AMQCPP_UNUSED, utils::BooleanStream *bs AMQCPP_UNUSED) throw (decaf::io::IOException)`
Tight Marshal to the given stream.
- virtual `void tightUnmarshal (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, decaf::io::DataInputStream *dis AMQCPP_UNUSED, utils::BooleanStream *bs AMQCPP_UNUSED) throw (decaf::io::IOException)`
Tight Un-Marshal to the given stream.
- virtual `void looseMarshal (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, decaf::io::DataOutputStream *ds AMQCPP_UNUSED) throw (decaf::io::IOException)`
Tight Marshal to the given stream.
- virtual `void looseUnmarshal (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, decaf::io::DataInputStream *dis AMQCPP_UNUSED) throw (decaf::io::IOException)`
Loose Un-Marshal to the given stream.

Static Public Member Functions

- static `std::string toString (const commands::MessageId *id)`
Converts the object to a String.
- static `std::string toString (const commands::ProducerId *id)`
Converts the object to a String.
- static `std::string toString (const commands::TransactionId *txnId)`
Converts the given transaction ID into a String.
- static `std::string toHexFromBytes (const std::vector< unsigned char > &data)`
given an array of bytes, convert that array to a Hexidecimal coded string that represents that data.

Protected Member Functions

- virtual **commands::DataStructure** * **tightUnmarshalCachedObject** (**OpenWireFormat** *wireFormat, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Tight Unmarshal the cached object.
- virtual int **tightMarshalCachedObject1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *data, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.
- virtual void **tightMarshalCachedObject2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *data, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Tightly marshals the passed DataStructure based object to the passed streams returning nothing.
- virtual void **looseMarshalCachedObject** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *data, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)
Loosely marshals the passed DataStructure based object to the passed stream returning nothing.
- virtual **commands::DataStructure** * **looseUnmarshalCachedObject** (**OpenWireFormat** *wireFormat, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)
Loose Unmarshal the cached object.
- virtual int **tightMarshalNestedObject1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *object, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.
- virtual void **tightMarshalNestedObject2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *object, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Tightly marshals the passed DataStructure based object to the passed streams returning nothing.
- virtual **commands::DataStructure** * **tightUnmarshalNestedObject** (**OpenWireFormat** *wireFormat, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Tight Unmarshal the nested object.
- virtual **commands::DataStructure** * **looseUnmarshalNestedObject** (**OpenWireFormat** *wireFormat, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)
Loose Unmarshal the nested object.
- virtual void **looseMarshalNestedObject** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *object, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Loose marshal the nested object.

- virtual std::string **tightUnmarshalString** (decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)

Performs Tight Unmarshaling of String Objects.

- virtual int **tightMarshalString1** (const std::string &value, utils::BooleanStream *bs) throw (decaf::io::IOException)

Tight Marshals the String to a Booleans Stream Object, returns the marshaled size.

- virtual void **tightMarshalString2** (const std::string &value, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)

Tight Marshals the passed string to the streams passed.

- virtual void **looseMarshalString** (const std::string value, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Loose Marshal the String to the DataOutputStream passed.

- virtual std::string **looseUnmarshalString** (decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Loose Un-Marshal the String to the DataOutputStream passed.

- virtual int **tightMarshalLong1** (OpenWireFormat *wireFormat, long long value, utils::BooleanStream *bs) throw (decaf::io::IOException)

Tightly marshal the long long to the BooleanStream passed.

- virtual void **tightMarshalLong2** (OpenWireFormat *wireFormat, long long value, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)

Tightly marshal the long long to the Streams passed.

- virtual long long **tightUnmarshalLong** (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)

Tight marshal the long long type.

- virtual void **looseMarshalLong** (OpenWireFormat *wireFormat, long long value, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)

Tightly marshal the long long to the BooleanStream passed.

- virtual long long **looseUnmarshalLong** (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Loose marshal the long long type.

- virtual std::vector< unsigned char > **tightUnmarshalByteArray** (decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)

Tight Unmarshal an array of char.

- virtual std::vector< unsigned char > **looseUnmarshalByteArray** (decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)
Loose Unmarshal an array of char.
- virtual std::vector< unsigned char > **tightUnmarshalConstByteArray** (decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs, int size) throw (decaf::io::IOException)
Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.
- virtual std::vector< unsigned char > **looseUnmarshalConstByteArray** (decaf::io::DataInputStream *dataIn, int size) throw (decaf::io::IOException)
Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.
- virtual commands::DataStructure * **tightUnmarshalBrokerError** (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tight Unmarshal the Error object.
- virtual int **tightMarshalBrokerError1** (OpenWireFormat *wireFormat, commands::DataStructure *data, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tight Marshal the Error object.
- virtual void **tightMarshalBrokerError2** (OpenWireFormat *wireFormat, commands::DataStructure *data, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tight Marshal the Error object.
- virtual commands::DataStructure * **looseUnmarshalBrokerError** (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)
Loose Unmarshal the Error object.
- virtual void **looseMarshalBrokerError** (OpenWireFormat *wireFormat, commands::DataStructure *data, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)
Tight Marshal the Error object.
- template<typename T >
int **tightMarshalObjectArray1** (OpenWireFormat *wireFormat, std::vector< T > objects, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tightly Marshal an array of DataStructure objects to the provided boolean stream, and return the size that the tight marshalling is going to take.
- template<typename T >
void **tightMarshalObjectArray2** (OpenWireFormat *wireFormat, std::vector< T > objects, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tightly Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

- `template<typename T >`
`void looseMarshalObjectArray (OpenWireFormat *wireFormat, std::vector< T > ob-`
`jects, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Loosely Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

- `virtual std::string readAsciiString (decaf::io::DataInputStream *dataIn) throw (de-`
`cafe::io::IOException)`

Given an DataInputStream read a know ASCII formatted string from the input and return that string.

6.115.1 Detailed Description

Base class for all Marshallers that marshal DataStructures to and from the wire using the Open-Wire protocol.

Since

2.0

6.115.2 Constructor & Destructor Documentation

- 6.115.2.1 `virtual`
`activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::~BaseDataStreamM`
`() [inline, virtual]`

6.115.3 Member Function Documentation

- 6.115.3.1 `virtual void ac-`
`tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshal`
`(OpenWireFormat *format AMQCPP_UNUSED, com-`
`mands::DataStructure *command AMQCPP_UNUSED,`
`decaf::io::DataOutputStream *ds AMQCPP_UNUSED) throw (`
`decaf::io::IOException) [inline, virtual]`

Tight Marshal to the given stream.

Parameters

format - The OpenwireFormat properties

command - the object to Marshal

ds - DataOutputStream to marshal to

Exceptions

IOException if an error occurs.

6.115.3.2 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalBrokerError
 (OpenWireFormat * *wireFormat*, commands::DataStructure * *data*,
 decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException
) [protected, virtual]

Tight Marshal the Error object.

Parameters

wireFormat - The OpenwireFormat properties

data - Error to Marshal

dataOut - stream to write marshalled data to

Exceptions

IOException if an error occurs.

6.115.3.3 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalCachedObject
 (OpenWireFormat * *wireFormat*, commands::DataStructure * *data*,
 decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException
) [protected, virtual]

Loosely marshals the passed DataStructure based object to the passed stream returning nothing.

Parameters

wireFormat - The OpenwireFormat properties

data - DataStructure Object Pointer to marshal

dataOut - stream to write marshaled data to

Exceptions

IOException if an error occurs.

6.115.3.4 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalLong
 (OpenWireFormat * *wireFormat*, long long *value*, de-
 caf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException)
 [protected, virtual]

Tightly marshal the long long to the BooleanStream passed.

Parameters

wireFormat - The OpenwireFormat properties

value - long long to marshal

dataOut - DataOutputStream to marshal to.

Exceptions

IOException if an error occurs.

6.115.3.5 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalNestedObject (OpenWireFormat * wireFormat, commands::DataStructure * object, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [protected, virtual]

Loose marshal the nested object.

Parameters

wireFormat - The OpenwireFormat properties
object - DataStructure Object Pointer to marshal
dataOut - stream to write marshaled data to

Exceptions

IOException if an error occurs.

6.115.3.6 `template<typename T > void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalObjectArray (OpenWireFormat * wireFormat, std::vector< T > objects, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [inline, protected]

Loosely Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

Parameters

wireFormat - The OpenwireFormat properties
objects - array of DataStructure object pointers.
dataOut - stream to write marshalled data to

Returns

size of the marshalled data

Exceptions

IOException if an error occurs.

References `AMQ_CATCH_EXCEPTION_CONVERT`, `AMQ_CATCH_RETHROW`, and `AMQ_CATCHALL_THROW`.

6.115.3.7 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalString (const std::string value, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [protected, virtual]

Loose Marshal the String to the DataOutputStream passed.

Parameters

value - string to marshal

dataOut - stream to write marshaled form to

Exceptions

IOException if an error occurs.

6.115.3.8 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshal (OpenWireFormat *format *AMQCPP_UNUSED*, commands::DataStructure *command *AMQCPP_UNUSED*, decaf::io::DataInputStream *dis *AMQCPP_UNUSED*) throw (decaf::io::IOException) [inline, virtual]

Loose Un-Marshal to the given stream.

Parameters

format - The OpenWireFormat properties
command - the object to Un-Marshal
dis - the DataInputStream to Un-Marshal from

Exceptions

IOException if an error occurs.

6.115.3.9 virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalBroken (OpenWireFormat * *wireFormat*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [protected, virtual]

Loose Unmarshal the Error object.

Parameters

wireFormat - The OpenWireFormat properties
dataIn - stream to read marshalled form from

Returns

pointer to a new DataStructure Object

Exceptions

IOException if an error occurs.

6.115.3.10 virtual std::vector<unsigned char> activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalBytes (decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [protected, virtual]

Loose Unmarshal an array of char.

Parameters

dataIn - the DataInputStream to Un-Marshal from

Returns

the unmarshalled vector of chars.

Exceptions

IOException if an error occurs.

```
6.115.3.11 virtual commands::DataStructure* ac-
           tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalCachedObject(
           ( OpenWireFormat * wireFormat, decaf::io::DataInputStream *
           dataIn ) throw ( decaf::io::IOException ) [protected, virtual]
```

Loose Unmarshal the cached object.

Parameters

wireFormat - The OpenwireFormat properties

dataIn - stream to read marshaled form from

Returns

pointer to a new DataStructure Object

Exceptions

IOException if an error occurs.

```
6.115.3.12 virtual std::vector<unsigned char> ac-
           tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalConstrainedObject(
           ( decaf::io::DataInputStream * dataIn, int size ) throw (
           decaf::io::IOException ) [protected, virtual]
```

Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.

Parameters

dataIn - the DataInputStream to Un-Marshal from

size - size of the const array to unmarshal

Returns

the unmarshalled vector of chars.

Exceptions

IOException if an error occurs.

6.115.3.13 `virtual long long activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalLong (OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [protected, virtual]

Loose marshal the long long type.

Parameters

wireFormat - The OpenwireFormat properties

dataIn - stream to read marshaled form from

Returns

the unmarshaled long long

Exceptions

IOException if an error occurs.

6.115.3.14 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalNested (OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [protected, virtual]

Loose Unmarshal the nested object.

Parameters

wireFormat - The OpenwireFormat properties

dataIn - stream to read marshaled form from

Returns

pointer to a new DataStructure Object

Exceptions

IOException if an error occurs.

6.115.3.15 `virtual std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalString (decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [protected, virtual]

Loose Un-Marshal the String to the DataOutputStream passed.

Parameters

dataIn - stream to read marshaled form from

Returns

the unmarshaled string

Exceptions

IOException if an error occurs.

6.115.3.16 `virtual std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::readAsciiString (decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [protected, virtual]

Given an DataInputStream read a know ASCII formatted string from the input and return that string.

Parameters

dataIn - DataInputStream to read from

Returns

string value read from stream

6.115.3.17 `virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshal1 (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, utils::BooleanStream *bs AMQCPP_UNUSED) throw (decaf::io::IOException)` [inline, virtual]

Tight Marshal to the given stream.

Parameters

format - The OpenWireFormat properties

command - the object to Marshal

bs - boolean stream to marshal to.

Exceptions

IOException if an error occurs.

6.115.3.18 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshal2 (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, decaf::io::DataOutputStream *ds AMQCPP_UNUSED, utils::BooleanStream *bs AMQCPP_UNUSED) throw (decaf::io::IOException)` [inline, virtual]

Tight Marshal to the given stream.

Parameters

format - The OpenWireFormat properties

command - the object to Marshal

ds - the DataOutputStream to Marshal to

bs - boolean stream to marshal to.

Exceptions

IOException if an error occurs.

6.115.3.19 virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalBroker(OpenWireFormat * *wireFormat*, commands::DataStructure * *data*, utils::BooleanStream * *bs*) throw (decaf::io::IOException)
[protected, virtual]

Tight Marshal the Error object.

Parameters

wireFormat - The OpenwireFormat properties

data - Error to Marshal

bs - boolean stream to marshal to.

Returns

size of the marshalled data

Exceptions

IOException if an error occurs.

6.115.3.20 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalBroker(OpenWireFormat * *wireFormat*, commands::DataStructure * *data*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*)
throw (decaf::io::IOException) [protected, virtual]

Tight Marshal the Error object.

Parameters

wireFormat - The OpenwireFormat properties

data - Error to Marshal

dataOut - stream to write marshalled data to

bs - boolean stream to marshal to.

Exceptions

IOException if an error occurs.

6.115.3.21 virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalCached(OpenWireFormat * *wireFormat*, commands::DataStructure * *data*, utils::BooleanStream * *bs*) throw (decaf::io::IOException)
[protected, virtual]

Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.

Parameters

wireFormat - The OpenwireFormat properties

data - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

Returns

size of data written.

Exceptions

IOException if an error occurs.

6.115.3.22 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalCached(OpenWireFormat * wireFormat, commands::DataStructure * data, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tightly marshals the passed DataStructure based object to the passed streams returning nothing.

Parameters

wireFormat - The OpenWireFormat properties

data - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

dataOut - stream to write marshaled data to

Exceptions

IOException if an error occurs.

6.115.3.23 `virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalLong1(OpenWireFormat * wireFormat, long long value, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tightly marshal the long long to the BooleanStream passed.

Parameters

wireFormat - The OpenWireFormat properties

value - long long to marshal

bs - boolean stream to marshal to.

Returns

size of data written.

Exceptions

IOException if an error occurs.

```

6.115.3.24  virtual void ac-
            tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalLong2
            ( OpenWireFormat * wireFormat, long long value,
              decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs )
            throw ( decaf::io::IOException ) [protected, virtual]

```

Tightly marshal the long long to the Streams passed.

Parameters

wireFormat - The OpenwireFormat properties

value - long long to marshal

dataOut - stream to write marshaled form to

bs - boolean stream to marshal to.

Exceptions

IOException if an error occurs.

```

6.115.3.25  virtual int ac-
            tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalNested
            ( OpenWireFormat * wireFormat, commands::DataStructure *
              object, utils::BooleanStream * bs ) throw ( decaf::io::IOException )
            [protected, virtual]

```

Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.

Parameters

wireFormat - The OpenwireFormat properties

object - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

Returns

size of data written.

Exceptions

IOException if an error occurs.

```

6.115.3.26  virtual void ac-
            tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalNested
            ( OpenWireFormat * wireFormat, commands::DataStructure *
              object, decaf::io::DataOutputStream * dataOut, utils::BooleanStream
              * bs ) throw ( decaf::io::IOException ) [protected, virtual]

```

Tightly marshals the passed DataStructure based object to the passed streams returning nothing.

Parameters

wireFormat - The OpenwireFormat properties

object - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

dataOut - stream to write marshaled data to

Exceptions

IOException if an error occurs.

```
6.115.3.27  template<typename T > int ac-
             tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalObject
             ( OpenWireFormat * wireFormat, std::vector< T > objects,
             utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [inline,
             protected]
```

Tightly Marshal an array of DataStructure objects to the provided boolean stream, and return the size that the tight marshalling is going to take.

Parameters

wireFormat - The OpenwireFormat properties

objects - array of DataStructure object pointers.

bs - boolean stream to marshal to.

Returns

size of the marshalled data

Exceptions

IOException if an error occurs.

References AMQ_CATCH_EXCEPTION_CONVERT, AMQ_CATCH_RETHROW, and AMQ_CATCHALL_THROW.

```
6.115.3.28  template<typename T > void ac-
             tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalObject
             ( OpenWireFormat * wireFormat, std::vector< T > objects,
             decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs )
             throw ( decaf::io::IOException ) [inline, protected]
```

Tightly Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

Parameters

wireFormat - The OpenwireFormat properties

objects - array of DataStructure object pointers.

dataOut - stream to write marshalled data to

bs - boolean stream to marshal to.

Returns

size of the marshalled data

Exceptions

IOException if an error occurs.

References AMQ_CATCH_EXCEPTION_CONVERT, AMQ_CATCH_RETHROW, and AMQ_CATCHALL_THROW.

6.115.3.29 `virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalString1 (const std::string & value, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Marshals the String to a Booleans Stream Object, returns the marshaled size.

Parameters

value - string to marshal
bs - BooleanStream to use.

Returns

size of marshaled string.

Exceptions

IOException if an error occurs.

6.115.3.30 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalString2 (const std::string & value, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Marshals the passed string to the streams passed.

Parameters

value - string to marshal
dataOut - the DataOutputStream to Marshal to
bs - boolean stream to marshal to.

Exceptions

IOException if an error occurs.

6.115.3.31 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshal (OpenWireFormat *format AMQCPP_UNUSED, commands::DataStructure *command AMQCPP_UNUSED, decaf::io::DataInputStream *dis AMQCPP_UNUSED, utils::BooleanStream *bs AMQCPP_UNUSED) throw (decaf::io::IOException)` [inline, virtual]

Tight Un-Marshal to the given stream.

Parameters

format - The OpenwireFormat properties
command - the object to Un-Marshall
dis - the DataInputStream to Un-Marshall from
bs - boolean stream to Un-Marshall from.

Exceptions

IOException if an error occurs.

```
6.115.3.32  virtual commands::DataStructure* ac-
             tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalBroken
             ( OpenWireFormat * wireFormat, decaf::io::DataInputStream *
               dataIn, utils::BooleanStream * bs ) throw ( decaf::io::IOException )
             [protected, virtual]
```

Tight Unmarshal the Error object.

Parameters

wireFormat - The OpenwireFormat properties
dataIn - stream to read marshalled form from
bs - boolean stream to marshal to.

Returns

pointer to a new DataStructure Object

Exceptions

IOException if an error occurs.

```
6.115.3.33  virtual std::vector<unsigned char> ac-
             tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalByte
             ( decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs )
             throw ( decaf::io::IOException ) [protected, virtual]
```

Tight Unmarshal an array of char.

Parameters

dataIn - the DataInputStream to Un-Marshall from
bs - boolean stream to unmarshal from.

Returns

the unmarshaled vector of chars.

Exceptions

IOException if an error occurs.

6.115.3.34 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalCached (OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Unmarshal the cached object.

Parameters

wireFormat - The OpenwireFormat properties

dataIn - stream to read marshaled form from

bs - boolean stream to marshal to.

Returns

pointer to a new DataStructure Object

Exceptions

IOException if an error occurs.

6.115.3.35 `virtual std::vector<unsigned char> activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalConst (decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs, int size) throw (decaf::io::IOException)` [protected, virtual]

Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.

Parameters

dataIn - the DataInputStream to Un-Marshall from

bs - boolean stream to unmarshal from.

size - size of the const array to unmarshal

Returns

the unmarshaled vector of chars.

Exceptions

IOException if an error occurs.

6.115.3.36 `virtual long long activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalLong (OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight marshal the long long type.

Parameters

wireFormat - The OpenwireFormat properties

dataIn - stream to read marshaled form from

bs - boolean stream to marshal to.

Returns

the unmarshaled long long

Exceptions

IOException if an error occurs.

```
6.115.3.37  virtual commands::DataStructure* ac-
            tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalNest
            ( OpenWireFormat * wireFormat, decaf::io::DataInputStream *
              dataIn, utils::BooleanStream * bs ) throw ( decaf::io::IOException )
            [protected, virtual]
```

Tight Unmarshal the nested object.

Parameters

wireFormat - The OpenwireFormat properties

dataIn - stream to read marshaled form from

bs - boolean stream to marshal to.

Returns

pointer to a new DataStructure Object

Exceptions

IOException if an error occurs.

```
6.115.3.38  virtual std::string ac-
            tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalStrin
            ( decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs )
            throw ( decaf::io::IOException ) [protected, virtual]
```

Performs Tight Unmarshaling of String Objects.

Parameters

dataIn - the DataInputStream to Un-Marshal from

bs - boolean stream to unmarshal from.

Returns

the unmarshaled string.

Exceptions

IOException if an error occurs.

6.115.3.39 `static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toHexFromBytes (const std::vector< unsigned char > & data) [static]`

given an array of bytes, convert that array to a Hexidecimal coded string that represents that data.

Parameters

data - unsigned char data array pointer

Returns

a string coded in hex that represents the data

6.115.3.40 `static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toString (const commands::TransactionId * txnId) [static]`

Converts the given transaction ID into a String.

Parameters

txnId - TransactionId poitner

Returns

string representation of the id

6.115.3.41 `static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toString (const commands::ProducerId * id) [static]`

Converts the object to a String.

Parameters

id - ProducerId pointer

Returns

string representing the id

6.115.3.42 `static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toString (const commands::MessageId * id) [static]`

Converts the object to a String.

Parameters

id - MessageId pointer

Returns

string representing the id

Referenced by `activemq::commands::ActiveMQMessageTemplate< cms::ObjectMessage >::getCMSMessageID()`.

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/BaseDataStreamMarshaller.h`

6.116 `activemq::commands::BaseDataStructure` Class Reference

```
#include <src/main/activemq/commands/BaseDataStructure.h>
```

Inheritance diagram for `activemq::commands::BaseDataStructure`:

Public Member Functions

- virtual `~BaseDataStructure()`
- virtual bool `isMarshalAware()` const
Determine if this object is aware of marshaling and should have its before and after marshaling methods called.
- virtual void `beforeMarshal(wireformat::WireFormat *wireFormat AMQCPP_UNUSED)` throw (`decaf::io::IOException`)
Perform any processing needed before an marshal.
- virtual void `afterMarshal(wireformat::WireFormat *wireFormat AMQCPP_UNUSED)` throw (`decaf::io::IOException`)
Perform any processing needed after an unmarshal.
- virtual void `beforeUnmarshal(wireformat::WireFormat *wireFormat AMQCPP_UNUSED)` throw (`decaf::io::IOException`)
Perform any processing needed before an unmarshal.
- virtual void `afterUnmarshal(wireformat::WireFormat *wireFormat AMQCPP_UNUSED)` throw (`decaf::io::IOException`)
Perform any processing needed after an unmarshal.
- virtual void `setMarshaledForm(wireformat::WireFormat *wireFormat AMQCPP_UNUSED, const std::vector< char > &data AMQCPP_UNUSED)`
Called to set the data to this object that will contain the objects marshaled form.
- virtual `std::vector< unsigned char > getMarshaledForm(wireformat::WireFormat *wireFormat AMQCPP_UNUSED)`
Called to get the data to this object that will contain the objects marshaled form.

- virtual void **copyDataStructure** (const **DataStructure** *src AMQCPP_UNUSED)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value AMQCPP_UNUSED) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*

6.116.1 Constructor & Destructor Documentation

- 6.116.1.1** virtual **activemq::commands::BaseDataStructure::~~BaseDataStructure** (
) [inline, virtual]

6.116.2 Member Function Documentation

- 6.116.2.1** virtual void **activemq::commands::BaseDataStructure::afterMarshal** (
 wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw (
 decaf::io::IOException) [inline, virtual]

Perform any processing needed after an unmarshal.

Parameters

wireformat - the OpenWireFormat object in use.

- 6.116.2.2** virtual void **activemq::commands::BaseDataStructure::afterUnmarshal** (
 wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw (
 decaf::io::IOException) [inline, virtual]

Perform any processing needed after an unmarshal.

Parameters

wireformat - the OpenWireFormat object in use.

Reimplemented in **activemq::commands::Message** (p. 2022), and **activemq::commands::WireFormatInfo** (p. 3155).

- 6.116.2.3** virtual void **activemq::commands::BaseDataStructure::beforeMarshal** (
 wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw (
 decaf::io::IOException) [inline, virtual]

Perform any processing needed before an marshal.

Parameters

wireformat - the OpenWireFormat object in use.

Reimplemented in **activemq::commands::Message** (p. 2022), and **activemq::commands::WireFormatInfo** (p. 3155).

6.116.2.4 `virtual void activemq::commands::BaseDataStructure::beforeUnmarshal
(wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw
(decaf::io::IOException) [inline, virtual]`

Perform any processing needed before an unmarshal.

Parameters

wireformat - the OpenWireFormat object in use.

6.116.2.5 `virtual void activemq::commands::BaseDataStructure::copyDataStructure
(const DataStructure *src AMQCPP_UNUSED) [inline, virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented in `activemq::commands::BooleanExpression` (p. 680).

6.116.2.6 `virtual bool activemq::commands::BaseDataStructure::equals (const
DataStructure *value AMQCPP_UNUSED) const [inline, virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Referenced by `activemq::commands::BooleanExpression::equals()`, and `activemq::commands::BaseCommand::equals()`.

6.116.2.7 `virtual std::vector<unsigned char> ac-
tivemq::commands::BaseDataStructure::getMarshaledForm
(wireformat::WireFormat *wireFormat AMQCPP_UNUSED)
[inline, virtual]`

Called to get the data to this object that will contain the objects marshaled form.

Parameters

wireFormat - the wireformat object to control unmarshaling

Returns

buffer that holds the objects data.

6.116.2.8 virtual bool activemq::commands::BaseDataStructure::isMarshalAware () const [inline, virtual]

Determine if this object is aware of marshaling and should have its before and after marshaling methods called.

Defaults to false.

Returns

true if aware of marshaling

Implements **activemq::wireformat::MarshalAware** (p. 1995).

Reimplemented in **activemq::commands::ActiveMQMapMessage** (p. 280), **activemq::commands::Message** (p. 2029), and **activemq::commands::WireFormatInfo** (p. 3158).

6.116.2.9 virtual void activemq::commands::BaseDataStructure::setMarshaledForm (wireformat::WireFormat *wireFormat *AMQCPP_UNUSED*, const std::vector< char > &data *AMQCPP_UNUSED*) [inline, virtual]

Called to set the data to this object that will contain the objects marshaled form.

Parameters

wireFormat - the wireformat object to control unmarshaling

data - vector of object binary data

6.116.2.10 virtual std::string activemq::commands::BaseDataStructure::toString () const [inline, virtual]

Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Implements **activemq::commands::DataStructure** (p. 1376).

Reimplemented in **activemq::commands::ActiveMQBlobMessage** (p. 146), **activemq::commands::ActiveMQBytesMessage** (p. 177), **activemq::commands::ActiveMQDestination** (p. 248), **activemq::commands::ActiveMQMapMessage** (p. 284), **activemq::commands::ActiveMQMessage** (p. 307), **activemq::commands::ActiveMQObjectMessage** (p. 346), **activemq::commands::ActiveMQStreamMessage** (p. 432), **activemq::commands::ActiveMQTextMessage** (p. 529), **activemq::commands::BaseCommand** (p. 602), **activemq::commands::BooleanExpression** (p. 680), **activemq::commands::BrokerInfo** (p. 719), **activemq::commands::Command** (p. 995), **activemq::commands::ConnectionControl** (p. 1058), **activemq::commands::ConnectionError** (p. 1082), **activemq::commands::ConnectionInfo** (p. 1133), **activemq::commands::ConsumerControl** (p. 1169), **activemq::commands::ConsumerInfo** (p. 1220), **activemq::commands::ControlCommand**

(p. 1245), `activemq::commands::DataArrayResponse` (p. 1270), `activemq::commands::DataResponse` (p. 1309), `activemq::commands::DestinationInfo` (p. 1394), `activemq::commands::DiscoveryEvent` (p. 1419), `activemq::commands::ExceptionResponse` (p. 1486), `activemq::commands::FlushCommand` (p. 1575), `activemq::commands::IntegerResponse` (p. 1669), `activemq::commands::JournalQueueAck` (p. 1721), `activemq::commands::JournalTopicAck` (p. 1745), `activemq::commands::JournalTrace` (p. 1769), `activemq::commands::JournalTransaction` (p. 1792), `activemq::commands::KeepAliveInfo` (p. 1815), `activemq::commands::LastPartialCommand` (p. 1842), `activemq::commands::Message` (p. 2033), `activemq::commands::MessageAck` (p. 2059), `activemq::commands::MessageDispatch` (p. 2087), `activemq::commands::MessageDispatchNotification` (p. 2119), `activemq::commands::MessagePull` (p. 2206), `activemq::commands::NetworkBridgeFilter` (p. 2249), `activemq::commands::PartialCommand` (p. 2321), `activemq::commands::ProducerAck` (p. 2423), `activemq::commands::ProducerInfo` (p. 2473), `activemq::commands::RemoveInfo` (p. 2539), `activemq::commands::RemoveSubscriptionInfo` (p. 2563), `activemq::commands::ReplayCommand` (p. 2586), `activemq::commands::Response` (p. 2614), `activemq::commands::SessionInfo` (p. 2704), `activemq::commands::ShutdownInfo` (p. 2759), `activemq::commands::SubscriptionInfo` (p. 2910), `activemq::commands::TransactionInfo` (p. 3040), and `activemq::commands::WireFormatInfo` (p. 3162).

Referenced by `activemq::commands::BooleanExpression::toString()`, and `activemq::commands::BaseCommand::toString()`.

Constructor.
- **BindException** (const char *file, const int lineNumber, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- virtual **BindException** * **clone** () const
Clones this exception.
- virtual ~**BindException** () throw ()

6.118.1 Constructor & Destructor Documentation

6.118.1.1 decaf::net::BindException::BindException () throw () [inline]

Default Constructor.

6.118.1.2 decaf::net::BindException::BindException (const Exception & ex) throw () [inline]

Conversion Constructor from some other Exception.

Parameters

ex An exception that should become this type of Exception

6.118.1.3 decaf::net::BindException::BindException (const BindException & ex) throw () [inline]

Copy Constructor.

Parameters

ex An exception that should become this type of Exception

6.118.1.4 `decaf::net::BindException::BindException (const char * file, const int lineNumber, const std::exception * cause, const char * msg, ...) throw () [inline]`

Constructor - Initializes the file name and line number where this message occurred.

Sets the message to report, using an optional list of arguments to parse into the message

Parameters

file The file name where exception occurs

lineNumber The line number where the exception occurred.

cause The exception that was the cause for this one to be thrown.

msg The message to report

... list of primitives that are formatted into the message

6.118.1.5 `decaf::net::BindException::BindException (const std::exception * cause) throw () [inline]`

Constructor.

Parameters

cause Pointer to the exception that caused this one to be thrown, the object is cloned caller retains ownership.

6.118.1.6 `decaf::net::BindException::BindException (const char * file, const int lineNumber, const char * msg, ...) throw () [inline]`

Constructor - Initializes the file name and line number where this message occurred.

Sets the message to report, using an optional list of arguments to parse into the message

Parameters

file The file name where exception occurs

lineNumber The line number where the exception occurred.

msg The message to report

... list of primitives that are formatted into the message

6.118.1.7 `virtual decaf::net::BindException::~~BindException () throw () [inline, virtual]`

6.118.2 Member Function Documentation

6.118.2.1 `virtual BindException* decaf::net::BindException::clone () const [inline, virtual]`

Clones this exception.

This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Returns

a new Exception instance that is a copy of this Exception object.

Reimplemented from **decaf::net::SocketException** (p. 2794).

The documentation for this class was generated from the following file:

- `src/main/decaf/net/BindException.h`

6.119 decaf::io::BlockingByteArrayInputStream Class Reference

This is a blocking version of a byte buffer stream.

```
#include <src/main/decaf/io/BlockingByteArrayInputStream.h>
```

Inheritance diagram for decaf::io::BlockingByteArrayInputStream:

Public Member Functions

- **BlockingByteArrayInputStream** ()
Default Constructor - uses a default internal buffer.
- **BlockingByteArrayInputStream** (const unsigned char *buffer, std::size_t bufferSize)
Constructor that initializes the internal buffer.
- virtual **~BlockingByteArrayInputStream** ()
Destructor.
- virtual void **setByteArray** (const unsigned char *buffer, std::size_t bufferSize)
Sets the data that this reader uses.
- virtual std::size_t **available** () const throw (IOException)
Indicates the number of bytes available to be read without blocking.
- virtual int **read** () throw (IOException)
Reads a single byte from the buffer.
- virtual int **read** (unsigned char *buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException)
Reads an array of bytes from the buffer.
- virtual void **close** () throw (io::IOException)
Closes the target input stream.
- virtual std::size_t **skip** (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException)
Skips over and discards n bytes of data from this input stream.

- virtual void **mark** (int readLimit DECAF_UNUSED)
Marks the current position in the stream. A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
- virtual void **reset** () throw (IOException)
Repositions this stream to the position at the time the mark method was last called on this input stream.
- virtual bool **markSupported** () const
Determines if this input stream supports the mark and reset methods.
- virtual void **lock** () throw (decaf::lang::exceptions::RuntimeException)
Locks the object.
- virtual bool **tryLock** () throw (decaf::lang::exceptions::RuntimeException)
Attempts to Lock the object, if the lock is already held by another thread than this method returns false.
- virtual void **unlock** () throw (decaf::lang::exceptions::RuntimeException)
Unlocks the object.
- virtual void **wait** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **wait** (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **wait** (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **notify** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)
Signals a waiter on this object that it can now wake up and continue.
- virtual void **notifyAll** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)
Signals the waiters on this object that it can now wake up and continue.

6.119.1 Detailed Description

This is a blocking version of a byte buffer stream. Read operations block until the requested data becomes available in the internal buffer via a call to setByteArray.

6.119.2 Constructor & Destructor Documentation

6.119.2.1 decaf::io::BlockingByteArrayInputStream::BlockingByteArrayInputStream ()

Default Constructor - uses a default internal buffer.

6.119.2.2 decaf::io::BlockingByteArrayInputStream::BlockingByteArrayInputStream (const unsigned char * *buffer*, std::size_t *bufferSize*)

Constructor that initializes the internal buffer.

See also

`setByteArray` (p. 671).

6.119.2.3 virtual decaf::io::BlockingByteArrayInputStream::~~BlockingByteArrayInputStream () [virtual]

Destructor.

6.119.3 Member Function Documentation

6.119.3.1 virtual std::size_t decaf::io::BlockingByteArrayInputStream::available () const throw (IOException) [inline, virtual]

Indicates the number of bytes available to be read without blocking.

Returns

the data available in the internal buffer.

Exceptions

IOException (p. 1707) if an error occurs.

Implements `decaf::io::InputStream` (p. 1631).

6.119.3.2 virtual void decaf::io::BlockingByteArrayInputStream::close () throw (io::IOException) [virtual]

Closes the target input stream.

Exceptions

IOException (p. 1707) if an error occurs.

6.119.3.3 `virtual void decaf::io::BlockingByteArrayInputStream::lock () throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]`

Locks the object.

Exceptions

RuntimeException if an error occurs while locking the object.

Implements `decaf::util::concurrent::Synchronizable` (p. 2932).

6.119.3.4 `virtual void decaf::io::BlockingByteArrayInputStream::mark (int readLimit DECAF_UNUSED) [inline, virtual]`

Marks the current position in the stream. A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.

If a stream instance reports that marks are supported then the stream will ensure that the same bytes can be read again after the reset method is called so long the readLimit is not reached.

Parameters

readLimit - max bytes read before marked position is invalid.

Implements `decaf::io::InputStream` (p. 1631).

6.119.3.5 `virtual bool decaf::io::BlockingByteArrayInputStream::markSupported () const [inline, virtual]`

Determines if this input stream supports the mark and reset methods.

Whether or not mark and reset are supported is an invariant property of a particular input stream instance.

Returns

true if this stream instance supports marks

Implements `decaf::io::InputStream` (p. 1631).

6.119.3.6 `virtual void decaf::io::BlockingByteArrayInputStream::notify () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]`

Signals a waiter on this object that it can now wake up and continue.

Must have this object locked before calling.

Exceptions

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying one of the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 2933).

6.119.3.7 `virtual void decaf::io::BlockingByteArrayInputStream::notifyAll () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]`

Signals the waiters on this object that it can now wake up and continue.

Must have this object locked before calling.

Exceptions

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 2934).

6.119.3.8 `virtual int decaf::io::BlockingByteArrayInputStream::read (unsigned char * buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException) [virtual]`

Reads an array of bytes from the buffer.

If the desired amount of data is not currently available, this operation will block until the appropriate amount of data is available in the buffer via a call to `setByteArray`.

Parameters

buffer (out) the target buffer

offset the position in the buffer to start from.

bufferSize the size of the output buffer.

Returns

the number of bytes read. or -1 if EOF

Exceptions

IOException (p. 1707) if an error occurs.

Implements `decaf::io::InputStream` (p. 1632).

6.119.3.9 `virtual int decaf::io::BlockingByteArrayInputStream::read () throw (IOException) [virtual]`

Reads a single byte from the buffer.

This operation will block until data has been added to the buffer via a call to `setByteArray`.

Returns

the next byte.

Exceptions

IOException (p. 1707) if an error occurs.

Implements `decaf::io::InputStream` (p. 1632).

6.119.3.10 `virtual void decaf::io::BlockingByteArrayInputStream::reset () throw (IOException) [inline, virtual]`

Repositions this stream to the position at the time the mark method was last called on this input stream.

If the method `markSupported` returns true, then: * If the method `mark` has not been called since the stream was created, or the number of bytes read from the stream since `mark` was last called is larger than the argument to `mark` at that last call, then an **IOException** (p. 1707) might be thrown. * If such an **IOException** (p. 1707) is not thrown, then the stream is reset to a state such that all the bytes read since the most recent call to `mark` (or since the start of the file, if `mark` has not been called) will be resupplied to subsequent callers of the `read` method, followed by any bytes that otherwise would have been the next input data as of the time of the call to `reset`. If the method `markSupported` returns false, then: * The call to `reset` may throw an **IOException** (p. 1707). * If an **IOException** (p. 1707) is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the `read` method depend on the particular type of the input stream.

Exceptions

IOException (p. 1707)

Implements `decaf::io::InputStream` (p. 1633).

6.119.3.11 `virtual void decaf::io::BlockingByteArrayInputStream::setByteArray (const unsigned char * buffer, std::size_t bufferSize) [virtual]`

Sets the data that this reader uses.

Replaces any existing data and resets the read index to the beginning of the buffer. When this method is called, it notifies any other threads that data is now available to be read.

Parameters

buffer The new data to be copied to the internal buffer.

bufferSize The size of the new buffer.

6.119.3.12 `virtual std::size_t decaf::io::BlockingByteArrayInputStream::skip (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException) [virtual]`

Skips over and discards *n* bytes of data from this input stream.

The `skip` method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before *n* bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If *n* is negative, no bytes are skipped.

The `skip` method of **InputStream** (p. 1630) creates a byte array and then repeatedly reads into it until *n* bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters

num - the number of bytes to skip

Returns

total bytes skipped

Exceptions

IOException (p. 1707) if an error occurs

Implements **decaf::io::InputStream** (p. 1633).

6.119.3.13 **virtual bool decaf::io::BlockingByteArrayInputStream::tryLock ()
 throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]**

Attempts to Lock the object, if the lock is already held by another thread than this method returns false.

Returns

true if the lock was acquired, false if it is already held by another thread.

Exceptions

RuntimeException if an error occurs while locking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2935).

6.119.3.14 **virtual void decaf::io::BlockingByteArrayInputStream::unlock ()
 throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]**

Unlocks the object.

Exceptions

RuntimeException if an error occurs while unlocking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2936).

6.119.3.15 **virtual void decaf::io::BlockingByteArrayInputStream::wait
 () throw (decaf::lang::exceptions::RuntimeException,
 decaf::lang::exceptions::IllegalMonitorStateException,
 decaf::lang::exceptions::InterruptedException) [inline, virtual]**

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling.

Exceptions

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2937).

```

6.119.3.16  virtual void decaf::io::BlockingByteArrayInputStream::wait
            ( long long millisecs, int nanos ) throw
            ( decaf::lang::exceptions::RuntimeException,
              decaf::lang::exceptions::IllegalArgumentException,
              decaf::lang::exceptions::IllegalMonitorStateException,
              decaf::lang::exceptions::InterruptedException ) [inline, virtual]

```

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling. This wait will timeout after the specified time interval. This method is similar to the one argument wait function except that it add a finer grained control over the amount of time that it waits by adding in the additional nanosecond argument.

NOTE: The ability to wait accurately at a nanosecond scale depends on the platform and OS that the Decaf API is running on, some systems do not provide an accurate enough clock to provide this level of granularity.

Parameters

millisecs the time in milliseconds to wait, or WAIT_INFINITE

nanos additional time in nanoseconds with a range of 0-999999

Exceptions

IllegalArgumentException if an error occurs or the nanos argument is not in the range of [0-999999]

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2940).

```

6.119.3.17  virtual void decaf::io::BlockingByteArrayInputStream::wait ( long
            long millisecs ) throw ( decaf::lang::exceptions::RuntimeException,
            decaf::lang::exceptions::IllegalMonitorStateException,
            decaf::lang::exceptions::InterruptedException ) [inline, virtual]

```

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling. This wait will timeout after the specified time interval.

Parameters

millisecs the time in milliseconds to wait, or WAIT_INFINITE

Exceptions

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2938).

The documentation for this class was generated from the following file:

Static Public Member Functions

- static **Boolean** **valueOf** (bool value)
- static **Boolean** **valueOf** (const std::string &value)
- static bool **parseBoolean** (const std::string &value)
Parses the String passed and extracts an bool.
- static std::string **toString** (bool value)
Converts the bool to a String representation.

Static Public Attributes

- static const **Boolean** `_FALSE`

The Class object representing the primitive false boolean.

- static const **Boolean** `_TRUE`

The Class object representing the primitive type boolean.

6.120.1 Constructor & Destructor Documentation

6.120.1.1 `decaf::lang::Boolean::Boolean (bool value)`

Parameters

value - primitive boolean to wrap.

6.120.1.2 `decaf::lang::Boolean::Boolean (const std::string & value)`

Parameters

value - String value to convert to a boolean.

6.120.1.3 `virtual decaf::lang::Boolean::~~Boolean ()` [inline, virtual]

6.120.2 Member Function Documentation

6.120.2.1 `bool decaf::lang::Boolean::booleanValue ()` const [inline]

Returns

the primitive boolean value of this object

6.120.2.2 `virtual int decaf::lang::Boolean::compareTo (const Boolean & b)` const [virtual]

Compares this **Boolean** (p. 674) instance with another.

Parameters

b - the **Boolean** (p. 674) instance to be compared

Returns

zero if this object represents the same boolean value as the argument; a positive value if this object represents true and the argument represents false; and a negative value if this object represents false and the argument represents true

6.120.2.3 `virtual int decaf::lang::Boolean::compareTo (const bool & b) const`
[virtual]

Compares this **Boolean** (p. 674) instance with another.

Parameters

b - the **Boolean** (p. 674) instance to be compared

Returns

zero if this object represents the same boolean value as the argument; a positive value if this object represents true and the argument represents false; and a negative value if this object represents false and the argument represents true

Implements **decaf::lang::Comparable**< **bool** > (p. 1010).

6.120.2.4 `bool decaf::lang::Boolean::equals (const bool & b) const` [inline,
virtual]

Returns

true if the two **Boolean** (p. 674) Objects have the same value.

Implements **decaf::lang::Comparable**< **bool** > (p. 1010).

6.120.2.5 `bool decaf::lang::Boolean::equals (const Boolean & b) const` [inline]

Returns

true if the two **Boolean** (p. 674) Objects have the same value.

6.120.2.6 `virtual bool decaf::lang::Boolean::operator< (const bool & value)`
`const` [virtual]

Compares this object to another and returns true if this object is considered to be less than the one passed.

This

Parameters

value - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable**< **bool** > (p. 1011).

6.120.2.7 `virtual bool decaf::lang::Boolean::operator< (const Boolean & value)`
`const` [virtual]

Compares this object to another and returns true if this object is considered to be less than the one passed.

This

Parameters

value - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

6.120.2.8 `virtual bool decaf::lang::Boolean::operator==(const bool & value) const [virtual]`

Compares equality between this object and the one passed.

Parameters

value - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

Implements `decaf::lang::Comparable< bool >` (p. 1011).

6.120.2.9 `virtual bool decaf::lang::Boolean::operator==(const Boolean & value) const [virtual]`

Compares equality between this object and the one passed.

Parameters

value - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

6.120.2.10 `static bool decaf::lang::Boolean::parseBoolean (const std::string & value) [static]`

Parses the String passed and extracts an bool.

Parameters

value The std::string value to parse

Returns

bool value

6.120.2.11 `static std::string decaf::lang::Boolean::toString (bool value) [static]`

Converts the bool to a String representation.

Parameters

value The bool value to convert.

Returns

std::string representation of the bool value passed.

6.120.2.12 `std::string decaf::lang::Boolean::toString () const`**Returns**

the string representation of this Boolean's value.

6.120.2.13 `static Boolean decaf::lang::Boolean::valueOf (bool value) [static]`**Parameters**

value The bool value to convert to a Boolean (p. 674) instance.

Returns

a Boolean (p. 674) instance of the primitive boolean value

6.120.2.14 `static Boolean decaf::lang::Boolean::valueOf (const std::string & value) [static]`**Parameters**

value The std::string value to convert to a Boolean (p. 674) instance.

Returns

a Boolean (p. 674) instance of the string value

6.120.3 Field Documentation**6.120.3.1** `const Boolean decaf::lang::Boolean::_FALSE [static]`

The Class object representing the primitive false boolean.

6.120.3.2 `const Boolean decaf::lang::Boolean::_TRUE [static]`

The Class object representing the primitive type boolean.

The documentation for this class was generated from the following file:

- src/main/decaf/lang/**Boolean.h**

6.121 activemq::commands::BooleanExpression Class Reference

```
#include <src/main/activemq/commands/BooleanExpression.h>
```

Inheritance diagram for `activemq::commands::BooleanExpression`:

Public Member Functions

- **BooleanExpression** ()
- virtual **~BooleanExpression** ()
- virtual **DataStructure * cloneDataStructure** () const
Clone this obbect and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src AMQCPP_UNUSED)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*

6.121.1 Constructor & Destructor Documentation

- 6.121.1.1** `activemq::commands::BooleanExpression::BooleanExpression ()`
[inline]
- 6.121.1.2** `virtual activemq::commands::BooleanExpression::~~BooleanExpression ()` [inline, virtual]

6.121.2 Member Function Documentation

- 6.121.2.1** `virtual DataStructure* activemq::commands::BooleanExpression::cloneDataStructure ()` const
[inline, virtual]

Clone this obbect and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Implements `activemq::commands::DataStructure` (p. 1373).

6.121.2.2 `virtual void activemq::commands::BooleanExpression::copyDataStructure (const DataStructure *src AMQCPP_UNUSED) [inline, virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from `activemq::commands::BaseDataStructure` (p. 661).

6.121.2.3 `virtual bool activemq::commands::BooleanExpression::equals (const DataStructure * value) const [inline, virtual]`

Compares the `DataStructure` (p. 1372) passed in to this one, and returns if they are equivalent.

Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Implements `activemq::commands::DataStructure` (p. 1374).

References `activemq::commands::BaseDataStructure::equals()`.

6.121.2.4 `virtual std::string activemq::commands::BooleanExpression::toString () const [inline, virtual]`

Returns a string containing the information for this `DataStructure` (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

Reimplemented from `activemq::commands::BaseDataStructure` (p. 662).

References `activemq::commands::BaseDataStructure::toString()`.

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/BooleanExpression.h`

6.122 activemq::wireformat::openwire::utils::BooleanStream Class Reference

Manages the writing and reading of boolean data streams to and from a data source such as a `DataInputStream` or `DataOutputStream`.

```
#include <src/main/activemq/wireformat/openwire/utils/BooleanStream.h>
```

Public Member Functions

- **BooleanStream** ()
- virtual **~BooleanStream** ()
- bool **readBoolean** () throw (decaf::io::IOException)
Read a boolean data element from the internal data buffer.
- void **writeBoolean** (bool value) throw (decaf::io::IOException)
Writes a Boolean value to the internal data buffer.
- void **marshal** (decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)
Marshal the data to a DataOutputStream.
- void **marshal** (std::vector< unsigned char > &dataOut)
Marshal the data to a STL vector of unsigned chars.
- void **unmarshal** (decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)
Unmarshal a Boolean data stream from the Input Stream.
- void **clear** ()
Clears to old position markers, data starts at the beginning.
- int **marshalledSize** ()
Calc the size that data is marshalled to.

6.122.1 Detailed Description

Manages the writing and reading of boolean data streams to and from a data source such as a DataInputStream or DataOutputStream. The booleans are stored as single bits in the stream, with the stream size pre-pended to the stream when the data is marshalled.

The serialized form of the size field can be between 1 and 3 bytes. If the number of used bytes < 64, size=1 byte If the number of used bytes >=64 and < 256 (size of an unsigned byte), size=2 bytes If the number of used bytes >=256, size=3 bytes

The high-order 2 bits (128 and 64) of the first byte of the size field are used to encode the information about the number of bytes in the size field. The only time the first byte will contain a value >=64 is if there are more bytes in the size field. If the first byte < 64, the value of the byte is simply the size value. If the first byte = 0xC0, the following unsigned byte is the size field. If the first byte = 0x80, the following short (two bytes) are the size field.

6.122.2 Constructor & Destructor Documentation

6.122.2.1 `activemq::wireformat::openwire::utils::BooleanStream::BooleanStream ()`

6.122.2.2 `virtual
activemq::wireformat::openwire::utils::BooleanStream::~~BooleanStream ()` [inline, virtual]

6.122.3 Member Function Documentation

6.122.3.1 `void activemq::wireformat::openwire::utils::BooleanStream::clear ()`

Clears to old position markers, data starts at the beginning.

6.122.3.2 `void activemq::wireformat::openwire::utils::BooleanStream::marshal (std::vector< unsigned char > & dataOut)`

Marshal the data to a STL vector of unsigned chars.

Parameters

dataOut - reference to a vector to write the data to.

6.122.3.3 `void activemq::wireformat::openwire::utils::BooleanStream::marshal (decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)`

Marshal the data to a DataOutputStream.

Parameters

dataOut - Stream to write the data to.

6.122.3.4 `int activemq::wireformat::openwire::utils::BooleanStream::marshalledSize ()`

Calc the size that data is marshalled to.

Returns

int size of marshalled data.

6.122.3.5 `bool activemq::wireformat::openwire::utils::BooleanStream::readBoolean () throw (decaf::io::IOException)`

Read a boolean data element from the internal data buffer.

Returns

boolean from the stream

6.122.3.6 `void activemq::wireformat::openwire::utils::BooleanStream::unmarshal (decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)`

Unmarshal a Boolean data stream from the Input Stream.

Parameters

dataIn - Input Stream to read data from.

6.122.3.7 `void activemq::wireformat::openwire::utils::BooleanStream::writeBoolean (bool value) throw (decaf::io::IOException)`

Writes a Boolean value to the internal data buffer.

Parameters

value - boolean data to write.

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/utils/BooleanStream.h`

6.123 decaf::util::concurrent::BrokenBarrierException Class Reference

```
#include <src/main/decaf/util/concurrent/BrokenBarrierException.h>
```

Inheritance diagram for decaf::util::concurrent::BrokenBarrierException:

Public Member Functions

- **BrokenBarrierException** () throw ()
Default Constructor.
- **BrokenBarrierException** (const decaf::lang::Exception &ex) throw ()
Conversion Constructor from some other Exception.
- **BrokenBarrierException** (const BrokenBarrierException &ex) throw ()
Copy Constructor.
- **BrokenBarrierException** (const std::exception *cause) throw ()
Constructor.
- **BrokenBarrierException** (const char *file, const int lineNumber, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.

- **BrokenBarrierException** (const char *file, const int lineNumber, const std::exception *cause, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- virtual **BrokenBarrierException** * clone () const
Clones this exception.
- virtual ~**BrokenBarrierException** () throw ()

6.123.1 Constructor & Destructor Documentation

6.123.1.1 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException () throw () [inline]

Default Constructor.

6.123.1.2 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const decaf::lang::Exception & ex) throw () [inline]

Conversion Constructor from some other Exception.

Parameters

ex An exception that should become this type of Exception

References decaf::lang::Exception::Exception().

6.123.1.3 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const BrokenBarrierException & ex) throw () [inline]

Copy Constructor.

Parameters

ex The Exception to copy in this new instance.

References decaf::lang::Exception::Exception().

6.123.1.4 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const std::exception * cause) throw () [inline]

Constructor.

Parameters

cause Pointer to the exception that caused this one to be thrown, the object is cloned caller retains ownership.

6.123.1.5 `decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException`
 (`const char * file`, `const int lineNumber`, `const char * msg`, ...)
 throw () [inline]

Constructor - Initializes the file name and line number where this message occurred.

Sets the message to report, using an optional list of arguments to parse into the message

Parameters

file - The file name where exception occurs
lineNumber - The line number where the exception occurred.
msg - The message to report
 ... - list of primitives that are formatted into the message

6.123.1.6 `decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException`
 (`const char * file`, `const int lineNumber`, `const std::exception * cause`,
`const char * msg`, ...) throw () [inline]

Constructor - Initializes the file name and line number where this message occurred.

Sets the message to report, using an optional list of arguments to parse into the message

Parameters

file - The file name where exception occurs
lineNumber - The line number where the exception occurred.
cause - The exception that was the cause for this one to be thrown.
msg - The message to report
 ... - list of primitives that are formatted into the message

6.123.1.7 `virtual`
`decaf::util::concurrent::BrokenBarrierException::~~BrokenBarrierException`
 () throw () [inline, virtual]

6.123.2 Member Function Documentation

6.123.2.1 `virtual BrokenBarrierException* decaf::util::concurrent::BrokenBarrierException::clone` ()
 const [inline, virtual]

Clones this exception.

This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Returns

a new instance of an exception that is a clone of this one.

Reimplemented from `decaf::lang::Exception` (p. 1479).

The documentation for this class was generated from the following file:

- `src/main/decaf/util/concurrent/BrokenBarrierException.h`

6.124 activemq::commands::BrokerError Class Reference

This class represents an Exception sent from the Broker.

```
#include <src/main/activemq/commands/BrokerError.h>
```

Inheritance diagram for activemq::commands::BrokerError:

Data Structures

- struct **StackTraceElement**

Public Member Functions

- **BrokerError** ()
- virtual **~BrokerError** ()
- virtual unsigned char **getDataStructureType** () const
*Get the **DataStructure** (p. 1372) Type as defined in CommandTypes.h.*
- virtual **BrokerError** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual **decaf::lang::Pointer**< **commands::Command** > **visit** (**activemq::state::CommandVisitor** *visitor) throw (**exceptions::ActiveMQException**)
Allows a Visitor to visit this command and return a response to the command based on the command type being visited.
- virtual const std::string & **getMessage** () const
Gets the string holding the error message.
- virtual void **setMessage** (const std::string &message)
*Sets the string that contains the error **Message** (p. 2018).*
- virtual const std::string & **getExceptionClass** () const
Gets the string holding the Exception Class name.
- virtual void **setExceptionClass** (const std::string &exceptionClass)
Sets the string that contains the Exception Class name.
- virtual const **decaf::lang::Pointer**< **BrokerError** > & **getCause** () const
Gets the Broker Error that caused this exception.
- virtual void **setCause** (const **decaf::lang::Pointer**< **BrokerError** > &cause)
Sets the Broker Error that caused this exception.

- virtual const std::vector< **decaf::lang::Pointer< StackTraceElement > >** & **getStackTraceElements** () const

Gets the Stack Trace Elements for the Exception.

- virtual void **setStackTraceElements** (const std::vector< **decaf::lang::Pointer< StackTraceElement > >** &stackTraceElements)

Sets the Stack Trace Elements for this Exception.

6.124.1 Detailed Description

This class represents an Exception sent from the Broker. The Broker sends java Throwables, so we must mimic its structure here.

6.124.2 Constructor & Destructor Documentation

6.124.2.1 **activemq::commands::BrokerError::BrokerError** () [inline]

6.124.2.2 **virtual activemq::commands::BrokerError::~~BrokerError** () [virtual]

6.124.3 Member Function Documentation

6.124.3.1 **virtual BrokerError* activemq::commands::BrokerError::cloneDataStructure** () const [inline, virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Implements **activemq::commands::DataStructure** (p. 1373).

References **copyDataStructure()**.

6.124.3.2 **virtual void activemq::commands::BrokerError::copyDataStructure** (const **DataStructure * src**) [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns

src - Source Object

Reimplemented from **activemq::commands::BaseCommand** (p. 598).

Referenced by **cloneDataStructure()**.

6.124.3.3 `virtual const decaf::lang::Pointer<BrokerError>&
activemq::commands::BrokerError::getCause () const [inline,
virtual]`

Gets the Broker Error that caused this exception.

Returns

Broker Error Pointer

6.124.3.4 `virtual unsigned char ac-
tivemq::commands::BrokerError::getDataStructureType () const [inline, virtual]`

Get the **DataStructure** (p. 1372) Type as defined in CommandTypes.h.

Returns

The type of the data structure

Implements **activemq::commands::DataStructure** (p. 1375).

6.124.3.5 `virtual const std::string& ac-
tivemq::commands::BrokerError::getExceptionClass ()
const [inline, virtual]`

Gets the string holding the Exception Class name.

Returns

Exception Class name

6.124.3.6 `virtual const std::string& activemq::commands::BrokerError::getMessage
() const [inline, virtual]`

Gets the string holding the error message.

Returns

String **Message** (p. 2018)

6.124.3.7 `virtual const std::vector< decaf::lang::Pointer<StackTraceElement> >&
activemq::commands::BrokerError::getStackTraceElements () const
[inline, virtual]`

Gets the Stack Trace Elements for the Exception.

Returns

Stack Trace Elements

6.124.3.8 `virtual void activemq::commands::BrokerError::setCause (const decaf::lang::Pointer< BrokerError > & cause) [inline, virtual]`

Sets the Broker Error that caused this exception.

Parameters

cause - Broker Error

6.124.3.9 `virtual void activemq::commands::BrokerError::setExceptionClass (const std::string & exceptionClass) [inline, virtual]`

Sets the string that contains the Exception Class name.

Parameters

exceptionClass - String Exception Class name

6.124.3.10 `virtual void activemq::commands::BrokerError::setMessage (const std::string & message) [inline, virtual]`

Sets the string that contains the error **Message** (p.2018).

Parameters

message - String Error **Message** (p.2018)

6.124.3.11 `virtual void activemq::commands::BrokerError::setStackTraceElements (const std::vector< decaf::lang::Pointer< StackTraceElement > > & stackTraceElements) [inline, virtual]`

Sets the Stack Trace Elements for this Exception.

Parameters

stackTraceElements - Stack Trace Elements

6.124.3.12 `virtual decaf::lang::Pointer<commands::Command> activemq::commands::BrokerError::visit (activemq::state::CommandVisitor * visitor) throw (exceptions::ActiveMQException) [virtual]`

Allows a Visitor to visit this command and return a response to the command based on the command type being visited.

The command will call the proper processXXX method in the visitor.

Returns

a **Response** (p.2611) to the visitor being called or NULL if no response.

Implements **activemq::commands::Command** (p. 995).

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/BrokerError.h`

6.125 activemq::exceptions::BrokerException Class Reference

```
#include <src/main/activemq/exceptions/BrokerException.h>
```

Inheritance diagram for `activemq::exceptions::BrokerException`:

Public Member Functions

- **BrokerException** () throw ()
- **BrokerException** (const **exceptions::ActiveMQException** &ex) throw ()
- **BrokerException** (const **BrokerException** &ex) throw ()
- **BrokerException** (const char *file, const int lineNumber, const char *msg,...) throw ()
- **BrokerException** (const char *file, const int lineNumber, const **commands::BrokerError** *error) throw ()
- virtual **BrokerException** * **clone** () const
Clones this exception.
- virtual ~**BrokerException** () throw ()

6.125.1 Constructor & Destructor Documentation

6.125.1.1 `activemq::exceptions::BrokerException::BrokerException () throw ()`
[inline]

6.125.1.2 `activemq::exceptions::BrokerException::BrokerException (const exceptions::ActiveMQException & ex) throw ()` [inline]

6.125.1.3 `activemq::exceptions::BrokerException::BrokerException (const BrokerException & ex) throw ()` [inline]

6.126 `activemq::commands::BrokerId` Class Reference

```
#include <src/main/activemq/commands/BrokerId.h>
```

Inheritance diagram for `activemq::commands::BrokerId`:

Public Types

- `typedef decaf::lang::PointerComparator< BrokerId > COMPARATOR`

Public Member Functions

- `BrokerId ()`
- `BrokerId (const BrokerId &other)`
- `virtual ~BrokerId ()`
- `virtual unsigned char getDataStructureType () const`
Get the unique identifier that this object and its own Marshaler share.
- `virtual BrokerId * cloneDataStructure () const`
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- `virtual void copyDataStructure (const DataStructure *src)`
Copy the contents of the passed object into this object's members, overwriting any existing data.
- `virtual std::string toString () const`
*Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.*
- `virtual bool equals (const DataStructure *value) const`
*Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent.*

- virtual const std::string & **getValue** () const
- virtual std::string & **getValue** ()
- virtual void **setValue** (const std::string &value)
- virtual int **compareTo** (const **BrokerId** &value) const
- virtual bool **equals** (const **BrokerId** &value) const
- virtual bool **operator==** (const **BrokerId** &value) const
- virtual bool **operator<** (const **BrokerId** &value) const
- **BrokerId** & **operator=** (const **BrokerId** &other)

Static Public Attributes

- static const unsigned char **ID_BROKERID** = 124

Protected Attributes

- std::string **value**

6.126.1 Member Typedef Documentation

- 6.126.1.1** typedef decaf::lang::PointerComparator<BrokerId>
 activemq::commands::BrokerId::COMPARATOR

6.126.2 Constructor & Destructor Documentation

- 6.126.2.1** activemq::commands::BrokerId::BrokerId ()
- 6.126.2.2** activemq::commands::BrokerId::BrokerId (const BrokerId & *other*)
- 6.126.2.3** virtual activemq::commands::BrokerId::~~BrokerId () [virtual]

6.126.3 Member Function Documentation

- 6.126.3.1** virtual BrokerId* activemq::commands::BrokerId::cloneDataStructure () const [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

- 6.126.3.2** virtual int activemq::commands::BrokerId::compareTo (const BrokerId & *value*) const [virtual]
- 6.126.3.3** virtual void activemq::commands::BrokerId::copyDataStructure (const DataStructure * *src*) [virtual]

Copy the contents of the passed object into this object's members, overwriting any existing data.

Parameters

src - Source Object

6.126.3.4 `virtual bool activemq::commands::BrokerId::equals (const
DataStructure * value) const` [virtual]

Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

6.126.3.5 `virtual bool activemq::commands::BrokerId::equals (const BrokerId &
value) const` [virtual]

6.126.3.6 `virtual unsigned char ac-
tivemq::commands::BrokerId::getDataStructureType () const` [virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns

new **DataStructure** (p. 1372) type copy.

6.126.3.7 `virtual const std::string& activemq::commands::BrokerId::getValue ()
const` [virtual]

6.126.3.8 `virtual std::string& activemq::commands::BrokerId::getValue ()
[virtual]`

6.126.3.9 `virtual bool activemq::commands::BrokerId::operator< (const BrokerId
& value) const` [virtual]

6.126.3.10 `BrokerId& activemq::commands::BrokerId::operator= (const BrokerId
& other)`

6.126.3.11 `virtual bool activemq::commands::BrokerId::operator== (const
BrokerId & value) const` [virtual]

6.126.3.12 `virtual void activemq::commands::BrokerId::setValue (const std::string
& value)` [virtual]

6.126.3.13 `virtual std::string activemq::commands::BrokerId::toString () const
[virtual]`

Returns a string containing the information for this **DataStructure** (p. 1372) such as its type and value of its elements.

Returns

formatted string useful for debugging.

6.126.4 Field Documentation

6.126.4.1 `const unsigned char activemq::commands::BrokerId::ID_BROKERID = 124 [static]`

6.126.4.2 `std::string activemq::commands::BrokerId::value [protected]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/BrokerId.h`

6.127 activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller Class Reference

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 694).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/BrokerIdMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller`:

Public Member Functions

- **BrokerIdMarshaller** ()
- virtual **~BrokerIdMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal1** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

6.127.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 694). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.127.2 Constructor & Destructor Documentation

6.127.2.1 **activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::BrokerIdMarshaller**
() [inline]

6.127.2.2 **virtual**
activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::~~BrokerIdMarshaller
() [inline, virtual]

6.127.3 Member Function Documentation

6.127.3.1 **virtual commands::DataStructure*** **activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::createObject**
() const [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1331).

6.127.3.2 **virtual unsigned char** **activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::getDataStructureType**
() const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1336).

6.127.3.3 virtual void activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::looseMarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1342).

6.127.3.4 virtual void activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1348).

6.127.3.5 virtual int activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

```
6.127.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::tightMarshal2
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

```
6.127.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/BrokerIdMarshaller.h`

6.128 `activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller` Class Reference

Marshaling code for Open Wire Format for `BrokerIdMarshaller` (p. 698).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/BrokerIdMarshaller.h>
```

Inheritance diagram for `activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller`:

Public Member Functions

- `BrokerIdMarshaller ()`
- `virtual ~BrokerIdMarshaller ()`
- `virtual commands::DataStructure * createObject () const`
Creates a new instance of this marshalable type.
- `virtual unsigned char getDataStructureType () const`
Get the Data Structure Type that identifies this Marshaller.
- `virtual void tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual int tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`
Write a object instance to data output stream.

6.128.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 698). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.128.2.1 `activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::BrokerIdMarshaller () [inline]`

6.128.2.2 `virtual activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::~~BrokerIdMarshaller () [inline, virtual]`

6.128.3 Member Function Documentation

6.128.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.128.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.128.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

6.128.3.4 virtual void `activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::looseUnmarshal`
(`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`, `decaf::io::DataInputStream * dataIn`) throw (`decaf::io::IOException`) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1348).

6.128.3.5 virtual int `activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::tightMarshal1`
(`OpenWireFormat * wireFormat`, `commands::DataStructure * dataStructure`, `utils::BooleanStream * bs`) throw (`decaf::io::IOException`) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1354).

6.128.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1360).

6.128.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1366).

6.129.3 Member Function Documentation

6.129.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.129.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.129.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

6.129.3.4 virtual void activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1348).

6.129.3.5 virtual int activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1354).

6.129.3.6 virtual void activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1360).

```
6.129.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1366).

6.130.2.2 `virtual activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::~~BrokerIdMarshaller () [inline, virtual]`

6.130.3 Member Function Documentation

6.130.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.130.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.130.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

6.130.3.4 virtual void activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1348).

6.130.3.5 virtual int activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1354).

6.130.3.6 virtual void activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions

- IOException* if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1360).

```
6.130.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions

- IOException* if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1366).

6.131.2.1 `activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::BrokerIdMarshaller () [inline]`

6.131.2.2 `virtual activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::~~BrokerIdMarshaller () [inline, virtual]`

6.131.3 Member Function Documentation

6.131.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.131.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.131.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1342).

6.131.3.4 virtual void activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1348).

6.131.3.5 virtual int activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1354).

6.131.3.6 virtual void activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1360).

```
6.131.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1366).

6.132.1 Constructor & Destructor Documentation

6.132.1.1 `activemq::commands::BrokerInfo::BrokerInfo (const BrokerInfo &)`
[inline, protected]

6.132.1.2 `activemq::commands::BrokerInfo::BrokerInfo ()`

6.132.1.3 `virtual activemq::commands::BrokerInfo::~~BrokerInfo ()` [virtual]

6.132.2 Member Function Documentation

6.132.2.1 `virtual BrokerInfo* activemq::commands::BrokerInfo::cloneDataStructure () const` [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns

new copy of this object.

Implements `activemq::commands::DataStructure` (p. 1373).

6.132.2.2 virtual void activemq::commands::BrokerInfo::copyDataStructure (const DataStructure * *src*) [virtual]

Copy the contents of the passed object into this object's members, overwriting any existing data.

Parameters

src - Source Object

Reimplemented from **activemq::commands::BaseCommand** (p. 598).

6.132.2.3 virtual bool activemq::commands::BrokerInfo::equals (const DataStructure * *value*) const [virtual]

Compares the **DataStructure** (p. 1372) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns

true if DataStructure's are Equal.

Reimplemented from **activemq::commands::BaseCommand** (p. 598).

- 6.132.2.4 `virtual Pointer<BrokerId>& activemq::commands::BrokerInfo::getBrokerId ()`
[virtual]
- 6.132.2.5 `virtual const Pointer<BrokerId>& activemq::commands::BrokerInfo::getBrokerId () const`
[virtual]
- 6.132.2.6 `virtual const std::string& activemq::commands::BrokerInfo::getBrokerName ()`
const [virtual]
- 6.132.2.7 `virtual std::string& activemq::commands::BrokerInfo::getBrokerName ()`
[virtual]
- 6.132.2.8 `virtual std::string& activemq::commands::BrokerInfo::getBrokerUploadUrl ()`
[virtual]
- 6.132.2.9 `virtual const std::string& activemq::commands::BrokerInfo::getBrokerUploadUrl ()`
const [virtual]
- 6.132.2.10 `virtual const std::string& activemq::commands::BrokerInfo::getBrokerURL ()`
const [virtual]
- 6.132.2.11 `virtual std::string& activemq::commands::BrokerInfo::getBrokerURL ()`

[virtual]
- 6.132.2.13 `virtual unsigned char activemq::commands::BrokerInfo::getDataStructureType () const`
[virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns

new **DataStructure** (p. 1372) type copy.

Implements **activemq::commands::DataStructure** (p. 1375).

- 6.132.2.14 `virtual const std::string& activemq::commands::BrokerInfo::getNetworkProperties () const [virtual]`
- 6.132.2.15 `virtual std::string& activemq::commands::BrokerInfo::getNetworkProperties () [virtual]`
- 6.132.2.16 `virtual const std::vector< decaf::lang::Pointer<BrokerInfo> >& activemq::commands::BrokerInfo::getPeerBrokerInfos () const [virtual]`
- 6.132.2.17 `virtual std::vector< decaf::lang::Pointer<BrokerInfo> >& activemq::commands::BrokerInfo::getPeerBrokerInfos () [virtual]`
- 6.132.2.18 `virtual bool activemq::commands::BrokerInfo::isBrokerInfo () const [inline, virtual]`

Returns

an answer of true to the `isBrokerInfo()` (p. 718) query.

Reimplemented from `activemq::commands::BaseCommand` (p. 600).

- 6.132.2.19 virtual bool activemq::commands::BrokerInfo::isDuplexConnection () const [virtual]
- 6.132.2.20 virtual bool activemq::commands::BrokerInfo::isFaultTolerantConfiguration () const [virtual]
- 6.132.2.21 virtual bool activemq::commands::BrokerInfo::isMasterBroker () const [virtual]
- 6.132.2.22 virtual bool activemq::commands::BrokerInfo::isNetworkConnection () const [virtual]
- 6.132.2.23 virtual bool activemq::commands::BrokerInfo::isSlaveBroker () const [virtual]
- 6.132.2.24 BrokerInfo& activemq::commands::BrokerInfo::operator= (const BrokerInfo &) [inline, protected]
- 6.132.2.25 virtual void activemq::commands::BrokerInfo::setBrokerId (const Pointer< BrokerId > & *brokerId*) [virtual]
- 6.132.2.26 virtual void activemq::commands::BrokerInfo::setBrokerName (const std::string & *brokerName*) [virtual]
- 6.132.2.27 virtual void activemq::commands::BrokerInfo::setBrokerUploadUrl (const std::string & *brokerUploadUrl*) [virtual]
- 6.132.2.28 virtual void activemq::commands::BrokerInfo::setBrokerURL (const std::string & *brokerURL*) [virtual]
- 6.132.2.29 virtual void activemq::commands::BrokerInfo::setConnectionId (long long *connectionId*) [virtual]
- 6.132.2.30 virtual void activemq::commands::BrokerInfo::setDuplexConnection (bool *duplexConnection*) [virtual]
- 6.132.2.31 virtual void activemq::commands::BrokerInfo::setFaultTolerantConfiguration (bool *faultTolerantConfiguration*) [virtual]
- 6.132.2.32 virtual void activemq::commands::BrokerInfo::setMasterBroker (bool *masterBroker*) [virtual]
- 6.132.2.33 virtual void activemq::commands::BrokerInfo::setNetworkConnection (bool *networkConnection*) [virtual]
- 6.132.2.34 virtual void activemq::commands::BrokerInfo::setNetworkProperties (const std::string & *networkProperties*) [virtual]
- 6.132.2.35 virtual void activemq::commands::BrokerInfo::setPeerBrokerInfos (const std::vector< decaf::lang::Pointer< BrokerInfo > > & *peerBrokerInfos*) [virtual]
- 6.132.2.36 virtual void activemq::commands::BrokerInfo::setSlaveBroker (bool *slaveBroker*) [virtual]
- 6.132.2.37 virtual std::string activemq::commands::BrokerInfo::toString () const [virtual]

Returns a string containing the information for this **DataStructure** (p.1372) such as its type and value of its elements

Returns

formatted string useful for debugging.

Reimplemented from **activemq::commands::BaseCommand** (p. 602).

6.132.2.38 `virtual Pointer<Command> activemq::commands::BrokerInfo::visit
(activemq::state::CommandVisitor * visitor) throw (
exceptions::ActiveMQException) [virtual]`

Allows a Visitor to visit this command and return a response to the command based on the command type being visited.

The command will call the proper processXXX method in the visitor.

Returns

a **Response** (p. 2611) to the visitor being called or NULL if no response.

Implements **activemq::commands::Command** (p. 995).

Creates a new instance of this marshalable type.

- virtual unsigned char `getDataStructureType () const`

Get the Data Structure Type that identifies this Marshaller.

- virtual void `tightUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Un-marshal an object instance from the data input stream.

- virtual int `tightMarshal1 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Write the booleans that this object uses to a BooleanStream.

- virtual void `tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Write a object instance to data output stream.

- virtual void `looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`

Un-marshal an object instance from the data input stream.

- virtual void `looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Write a object instance to data output stream.

6.133.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 721). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.133.2 Constructor & Destructor Documentation

6.133.2.1 `activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::BrokerInfoMarshaller () [inline]`

6.133.2.2 `virtual activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::~~BrokerInfoMarshaller () [inline, virtual]`

6.133.3 Member Function Documentation

6.133.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.133.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.133.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller` (p. 604).

6.133.3.4 virtual void activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller** (p. 605).

6.133.3.5 virtual int activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller** (p. 606).

6.133.3.6 virtual void activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller` (p. 608).

```
6.133.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller` (p. 609).

The documentation for this class was generated from the following file:

6.134.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 725). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.134.2 Constructor & Destructor Documentation

6.134.2.1 `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::BrokerInfoMarshaller()` [inline]

6.134.2.2 `virtual activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::~~BrokerInfoMarshaller()` [inline, virtual]

6.134.3 Member Function Documentation

6.134.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.134.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.134.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller` (p. 611).

6.134.3.4 virtual void activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller** (p. 612).

6.134.3.5 virtual int activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller** (p. 613).

6.134.3.6 virtual void activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller` (p. 614).

```
6.134.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller` (p. 615).

The documentation for this class was generated from the following file:

6.135.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 729). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.135.2 Constructor & Destructor Documentation

6.135.2.1 `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::BrokerInfoMarshaller () [inline]`

6.135.2.2 `virtual activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::~~BrokerInfoMarshaller () [inline, virtual]`

6.135.3 Member Function Documentation

6.135.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.135.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.135.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller` (p. 618).

6.135.3.4 virtual void activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller** (p. 619).

6.135.3.5 virtual int activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller** (p. 620).

6.135.3.6 virtual void activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller` (p. 621).

```
6.135.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller` (p. 622).

The documentation for this class was generated from the following file:

6.136.2 Constructor & Destructor Documentation

6.136.2.1 `activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::BrokerInfoMarshaller () [inline]`

6.136.2.2 `virtual activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::~~BrokerInfoMarshaller () [inline, virtual]`

6.136.3 Member Function Documentation

6.136.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::createObject () const [virtual]`

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.136.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::getDataStructureType () const [virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.136.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::looseMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 624).

6.136.3.4 virtual void activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 625).

6.136.3.5 virtual int activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 626).

6.136.3.6 virtual void activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 628).

```
6.136.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 629).

Creates a new instance of this marshalable type.

Returns

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1331).

6.137.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1336).

6.137.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller` (p. 631).

6.137.3.4 virtual void activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller** (p. 632).

6.137.3.5 virtual int activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns

int value indicating the size of the marshaled object.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller** (p. 633).

6.137.3.6 virtual void activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller` (p. 634).

```
6.137.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::tightUnmarshal
( OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn,
utils::BooleanStream * bs ) throw ( decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters

wireFormat - describes the wire format of the broker.

dataStructure - Object to be un-marshaled.

dataIn - BinaryReader that provides that data.

bs - BooleanStream stream used to unpack bits from the wire.

Exceptions

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller` (p. 635).

6.138.1 Detailed Description

A container for data of a specific primitive type. A buffer is a linear, finite sequence of elements of a specific primitive type. Aside from its content, the essential properties of a buffer are its capacity, limit, and position:

A buffer's capacity is the number of elements it contains. The capacity of a buffer is never negative and never changes.

A buffer's limit is the index of the first element that should not be read or written. A buffer's limit is never negative and is never greater than its capacity.

A buffer's position is the index of the next element to be read or written. A buffer's position is never negative and is never greater than its limit.

There is one subclass of this class for each non-boolean primitive type.

Transferring data: Each subclass of this class defines two categories of get and put operations: * Relative operations read or write one or more elements starting at the current position and then increment the position by the number of elements transferred. If the requested transfer exceeds the limit then a relative get operation throws a **BufferUnderflowException** (p. 774) and a relative put operation throws a **BufferOverflowException** (p. 771); in either case, no data is transferred. * Absolute operations take an explicit element index and do not affect the position. Absolute get and put operations throw an **IndexOutOfBoundsException** if the index argument exceeds the limit.

Data may also, of course, be transferred in to or out of a buffer by the I/O operations of an appropriate channel, which are always relative to the current position.

Marking and resetting:

A buffer's mark is the index to which its position will be reset when the reset method is invoked. The mark is not always defined, but when it is defined it is never negative and is never greater than the position. If the mark is defined then it is discarded when the position or the limit is adjusted to a value smaller than the mark. If the mark is not defined then invoking the reset method causes an **InvalidMarkException** (p. 1700) to be thrown.

Invariants:

The following invariant holds for the mark, position, limit, and capacity values: $0 \leq \text{mark} \leq \text{position} \leq \text{limit} \leq \text{capacity}$

A newly-created buffer always has a position of zero and a mark that is undefined. The initial limit may be zero, or it may be some other value that depends upon the type of the buffer and the manner in which it is constructed. The initial content of a buffer is, in general, undefined.

Clearing, flipping, and rewinding:

In addition to methods for accessing the position, limit, and capacity values and for marking and resetting, this class also defines the following operations upon buffers:

clear() (p. 744) makes a buffer ready for a new sequence of channel-read or relative put operations: It sets the limit to the capacity and the position to zero.

flip() (p. 744) makes a buffer ready for a new sequence of channel-write or relative get operations: It sets the limit to the current position and then sets the position to zero.

rewind() (p. 747) makes a buffer ready for re-reading the data that it already contains: It leaves the limit unchanged and sets the position to zero.

Read-only buffers:

Every buffer is readable, but not every buffer is writable. The mutation methods of each buffer

class are specified as optional operations that will throw a **ReadOnlyBufferException** (p. 2520) when invoked upon a read-only buffer. A read-only buffer does not allow its content to be changed, but its mark, position, and limit values are mutable. Whether or not a buffer is read-only may be determined by invoking its `isReadOnly` method.

Thread safety:

Buffers are not safe for use by multiple concurrent threads. If a buffer is to be used by more than one thread then access to the buffer should be controlled by appropriate synchronization.

Invocation chaining:

Methods in this class that do not otherwise have a value to return are specified to return the buffer upon which they are invoked. This allows method invocations to be chained; for example, the sequence of statements

```
b.flip(); b.position(23); b.limit(42);
```

can be replaced by the single, more compact statement `b.flip().position(23).limit(42);`

6.138.2 Constructor & Destructor Documentation

6.138.2.1 `decaf::nio::Buffer::Buffer (std::size_t capacity)`

6.138.2.2 `decaf::nio::Buffer::Buffer (const Buffer & other)`

6.138.2.3 `virtual decaf::nio::Buffer::~~Buffer () [inline, virtual]`

6.138.3 Member Function Documentation

6.138.3.1 `virtual std::size_t decaf::nio::Buffer::capacity () const [inline, virtual]`

Returns

this buffer's capacity.

6.138.3.2 `virtual Buffer& decaf::nio::Buffer::clear () [virtual]`

Clears this buffer.

The position is set to zero, the limit is set to the capacity, and the mark is discarded.

Invoke this method before using a sequence of channel-read or put operations to fill this buffer. For example:

```
buf.clear(); // Prepare buffer for reading in.read(buf); // Read data
```

This method does not actually erase the data in the buffer, but it is named as if it did because it will most often be used in situations in which that might as well be the case.

Returns

a reference to this buffer.

6.138.3.3 `virtual Buffer& decaf::nio::Buffer::flip () [virtual]`

Flips this buffer.

The limit is set to the current position and then the position is set to zero. If the mark is defined then it is discarded.

After a sequence of channel-read or put operations, invoke this method to prepare for a sequence of channel-write or relative get operations. For example:

```
buf.put(magic); // Prepend header
in.read(buf); // Read data into rest of buffer
buf.flip(); // Flip buffer
out.write(buf); // Write header + data to channel
```

This method is often used in conjunction with the compact method when transferring data from one place to another.

Returns

a reference to this buffer.

6.138.3.4 `virtual bool decaf::nio::Buffer::hasRemaining () const [inline, virtual]`

Tells whether there are any elements between the current position and the limit.

Returns

true if, and only if, there is at least one element remaining in this buffer

6.138.3.5 `virtual bool decaf::nio::Buffer::isReadOnly () const [pure virtual]`

Tells whether or not this buffer is read-only.

Returns

true if, and only if, this buffer is read-only

6.138.3.6 `virtual std::size_t decaf::nio::Buffer::limit () const [inline, virtual]`

Returns

this buffers Limit

6.138.3.7 `virtual Buffer& decaf::nio::Buffer::limit (std::size_t newLimit) throw (lang::exceptions::IllegalArgumentException) [virtual]`

Sets this buffer's limit.

If the position is larger than the new limit then it is set to the new limit. If the mark is defined and larger than the new limit then it is discarded.

Parameters

newLimit - The new limit value; must be no larger than this buffer's capacity

Returns

A reference to This buffer

Exceptions

IllegalArgumentException if preconditions on the new pos don't hold.

6.138.3.8 virtual Buffer& decaf::nio::Buffer::mark () [virtual]

Sets this buffer's mark at its position.

Returns

a reference to this buffer.

6.138.3.9 virtual std::size_t decaf::nio::Buffer::position () const [inline, virtual]

Returns

the current position in the buffer

6.138.3.10 virtual Buffer& decaf::nio::Buffer::position (std::size_t newPosition) throw (lang::exceptions::IllegalArgumentException) [virtual]

Sets this buffer's position.

If the mark is defined and larger than the new position then it is discarded.

Parameters

newPosition - the new position in the buffer to set.

Returns

A reference to This buffer

Exceptions

IllegalArgumentException if preconditions on the new pos don't hold.

6.138.3.11 virtual std::size_t decaf::nio::Buffer::remaining () const [inline, virtual]

Returns the number of elements between the current position and the limit.

Returns

The number of elements remaining in this buffer

6.138.3.12 `virtual Buffer& decaf::nio::Buffer::reset () throw (InvalidMarkException) [virtual]`

Resets this buffer's position to the previously-marked position.

Returns

a reference to this buffer.

Exceptions

InvalidMarkException (p. 1700) - If the mark has not been set

6.138.3.13 `virtual Buffer& decaf::nio::Buffer::rewind () [virtual]`

Rewinds this buffer.

The position is set to zero and the mark is discarded.

Invoke this method before a sequence of channel-write or get operations, assuming that the limit has already been set appropriately. For example:

```
out.write(buf); // Write remaining data buf.rewind(); // Rewind buffer buf.get(array); // Copy data into array
```

Returns

a reference to this buffer.

6.138.4 Field Documentation

6.138.4.1 `std::size_t decaf::nio::Buffer::_capacity [protected]`

6.138.4.2 `std::size_t decaf::nio::Buffer::_limit [protected]`

6.138.4.4 `bool decaf::nio::Buffer::_markSet [protected]`

6.138.4.5 `std::size_t decaf::nio::Buffer::_position [mutable, protected]`

The documentation for this class was generated from the following file:

- `src/main/decaf/nio/Buffer.h`

6.139 `decaf::io::BufferedInputStream` Class Reference

A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream.

```
#include <src/main/decaf/io/BufferedInputStream.h>
```

Inheritance diagram for `decaf::io::BufferedInputStream`:

Public Member Functions

- **BufferedInputStream** (**InputStream** *stream, bool **own**=false)
Constructor.
- **BufferedInputStream** (**InputStream** *stream, std::size_t bufferSize, bool **own**=false) throw (lang::exceptions::IllegalArgumentException)
Constructor.
- virtual ~**BufferedInputStream** ()
- virtual std::size_t **available** () const throw (IOException)
Indicates the number of bytes available.
- virtual void **close** () throw (IOException)
*Close this **BufferedInputStream** (p. 747).*
- virtual int **read** () throw (IOException)
Reads a single byte from the buffer.
- virtual int **read** (unsigned char *buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException)
Reads an array of bytes from the buffer.
- virtual std::size_t **skip** (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException)
Skips over and discards n bytes of data from this input stream.
- virtual void **mark** (int readLimit)
Marks the current position in the stream A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
- virtual void **reset** () throw (IOException)
Repositions this stream to the position at the time the mark method was last called on this input stream.
- virtual bool **markSupported** () const
Determines if this input stream supports the mark and reset methods.

6.139.1 Detailed Description

A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream.

6.139.2 Constructor & Destructor Documentation

6.139.2.1 decaf::io::BufferedInputStream::BufferedInputStream (**InputStream** *stream, bool *own* = false)

Constructor.

Parameters

stream The target input stream.

own indicates if we own the stream object, defaults to false

6.139.2.2 `decaf::io::BufferedInputStream::BufferedInputStream (InputStream
* stream, std::size_t bufferSize, bool own = false) throw (
lang::exceptions::IllegalArgumentException)`

Constructor.

Parameters

stream the target input stream

bufferSize the size for the internal buffer.

own indicates if we own the stream object, defaults to false.

Exceptions

IllegalArgumentException is the size is zero.

6.139.2.3 `virtual decaf::io::BufferedInputStream::~~BufferedInputStream ()
[virtual]`

6.139.3 Member Function Documentation

6.139.3.1 `virtual std::size_t decaf::io::BufferedInputStream::available () const
throw (IOException) [inline, virtual]`

Indicates the number of bytes available.

Returns

the sum of the amount of data available in the buffer and the data available on the target input stream.

Reimplemented from `decaf::io::FilterInputStream` (p. 1530).

6.139.3.2 `virtual void decaf::io::BufferedInputStream::close () throw (
IOException) [virtual]`

Close this `BufferedInputStream` (p. 747).

This implementation closes the target stream and releases any resources associated with it.

Exceptions

IOException (p. 1707) If an error occurs attempting to close this stream.

Reimplemented from `decaf::io::FilterInputStream` (p. 1530).

6.139.3.3 virtual void decaf::io::BufferedInputStream::mark (int readLimit) [inline, virtual]

Marks the current position in the stream. A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.

If a stream instance reports that marks are supported then the stream will ensure that the same bytes can be read again after the reset method is called so long the readLimit is not reached.

Parameters

readLimit max bytes read before marked position is invalid.

Reimplemented from **decaf::io::FilterInputStream** (p. 1531).

6.139.3.4 virtual bool decaf::io::BufferedInputStream::markSupported () const [inline, virtual]

Determines if this input stream supports the mark and reset methods.

Whether or not mark and reset are supported is an invariant property of a particular input stream instance.

Returns

true if this stream instance supports marks

Reimplemented from **decaf::io::FilterInputStream** (p. 1531).

6.139.3.5 virtual int decaf::io::BufferedInputStream::read (unsigned char * *buffer*, std::size_t *offset*, std::size_t *bufferSize*) throw (IOException, lang::exceptions::NullPointerException) [virtual]

Reads an array of bytes from the buffer.

Blocks until the requested number of bytes are available.

Parameters

buffer (out) the target buffer.

offset the position in the buffer to start reading from.

bufferSize the size of the output buffer.

Returns

The number of bytes read or -1 if EOF

Exceptions

IOException (p. 1707) thrown if an error occurs.

NullPointerException if buffer is NULL

Reimplemented from **decaf::io::FilterInputStream** (p. 1533).

6.139.3.6 `virtual int decaf::io::BufferedInputStream::read () throw (IOException) [virtual]`

Reads a single byte from the buffer.

Blocks until the data is available.

Returns

The next byte.

Exceptions

IOException (p. 1707) thrown if an error occurs.

Reimplemented from `decaf::io::FilterInputStream` (p. 1532).

6.139.3.7 `virtual void decaf::io::BufferedInputStream::reset () throw (IOException) [inline, virtual]`

Repositions this stream to the position at the time the mark method was last called on this input stream.

If the method `markSupported` returns true, then: * If the method `mark` has not been called since the stream was created, or the number of bytes read from the stream since `mark` was last called is larger than the argument to `mark` at that last call, then an **IOException** (p. 1707) might be thrown. * If such an **IOException** (p. 1707) is not thrown, then the stream is reset to a state such that all the bytes read since the most recent call to `mark` (or since the start of the file, if `mark` has not been called) will be resupplied to subsequent callers of the `read` method, followed by any bytes that otherwise would have been the next input data as of the time of the call to `reset`. If the method `markSupported` returns false, then: * The call to `reset` may throw an **IOException** (p. 1707). * If an **IOException** (p. 1707) is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the `read` method depend on the particular type of the input stream.

Exceptions

IOException (p. 1707)

Reimplemented from `decaf::io::FilterInputStream` (p. 1533).

6.139.3.8 `virtual std::size_t decaf::io::BufferedInputStream::skip (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException) [virtual]`

Skips over and discards n bytes of data from this input stream.

The `skip` method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before n bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If n is negative, no bytes are skipped.

The `skip` method of **InputStream** (p. 1630) creates a byte array and then repeatedly reads into it until n bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters

num - the number of bytes to skip

Returns

total butes skipped

Exceptions

IOException (p. 1707) if an error occurs

Reimplemented from **decaf::io::FilterInputStream** (p. 1534).

The documentation for this class was generated from the following file:

- `src/main/decaf/io/BufferedInputStream.h`

6.140 decaf::io::BufferedOutputStream Class Reference

Wrapper around another output stream that buffers output before writing to the target output stream.

```
#include <src/main/decaf/io/BufferedOutputStream.h>
```

Inheritance diagram for decaf::io::BufferedOutputStream:

Public Member Functions

- **BufferedOutputStream** (**OutputStream** *stream, bool **own**=false)
Constructor.
- **BufferedOutputStream** (**OutputStream** *stream, std::size_t bufferSize, bool **own**=false) throw (lang::exceptions::IllegalArgumentException)
Constructor.
- virtual ~**BufferedOutputStream** ()
- virtual void **write** (unsigned char c) throw (IOException)
Writes a single byte to the output stream.
- virtual void **write** (const std::vector< unsigned char > &buffer) throw (IOException)
Writes an array of bytes to the output stream.
- virtual void **write** (const unsigned char *buffer, std::size_t offset, std::size_t len) throw (IOException, lang::exceptions::NullPointerException)
Writes an array of bytes to the output stream.
- virtual void **flush** () throw (IOException)
Invokes flush on the target output stream.
- void **close** () throw (io::IOException)
Invokes close on the target output stream.

6.140.1 Detailed Description

Wrapper around another output stream that buffers output before writing to the target output stream.

6.140.2 Constructor & Destructor Documentation

6.140.2.1 `decaf::io::BufferedOutputStream::BufferedOutputStream (OutputStream * stream, bool own = false)`

Constructor.

Parameters

- stream* The target output stream.
- own* Indicates if this class owns the stream pointer.

6.140.2.2 `decaf::io::BufferedOutputStream::BufferedOutputStream (OutputStream * stream, std::size_t bufferSize, bool own = false) throw (lang::exceptions::IllegalArgumentException)`

Constructor.

Parameters

- stream* The target output stream.
- bufferSize* The size for the internal buffer.
- own* Indicates if this class owns the stream pointer.

6.140.2.3 `virtual decaf::io::BufferedOutputStream::~~BufferedOutputStream ()` [virtual]

6.140.3 Member Function Documentation

6.140.3.1 `void decaf::io::BufferedOutputStream::close () throw (io::IOException)` [virtual]

Invokes close on the target output stream.

Exceptions

- IOException* (p. 1707) thrown if an error occurs.

Reimplemented from `decaf::io::FilterOutputStream` (p. 1539).

6.140.3.2 `virtual void decaf::io::BufferedOutputStream::flush () throw (IOException)` [virtual]

Invokes flush on the target output stream.

Exceptions

IOException (p. 1707) thrown if an error occurs.

Reimplemented from `decaf::io::FilterOutputStream` (p. 1539).

6.140.3.3 `virtual void decaf::io::BufferedOutputStream::write (const std::vector< unsigned char > & buffer) throw (IOException) [virtual]`

Writes an array of bytes to the output stream.

Parameters

buffer The bytes to write.

Exceptions

IOException (p. 1707) thrown if an error occurs.

Reimplemented from `decaf::io::FilterOutputStream` (p. 1542).

6.140.3.4 `virtual void decaf::io::BufferedOutputStream::write (const unsigned char * buffer, std::size_t offset, std::size_t len) throw (IOException, lang::exceptions::NullPointerException) [virtual]`

Writes an array of bytes to the output stream.

Parameters

buffer The array of bytes to write.

offset the position to start writing in buffer.

len The number of bytes from the buffer to be written.

Exceptions

IOException (p. 1707) thrown if an error occurs.

NullPointerException thrown if buffer is Null.

Reimplemented from `decaf::io::FilterOutputStream` (p. 1543).

6.140.3.5 `virtual void decaf::io::BufferedOutputStream::write (unsigned char c) throw (IOException) [virtual]`

Writes a single byte to the output stream.

Parameters

c the byte.

Exceptions

IOException (p. 1707) thrown if an error occurs.

Reimplemented from **decaf::io::FilterOutputStream** (p. 1542).

The documentation for this class was generated from the following file:

- `src/main/decaf/io/BufferedOutputStream.h`

6.141 decaf::net::BufferedSocket Class Reference

Buffered **Socket** (p. 2786) class that wraps a **Socket** (p. 2786) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes.

```
#include <src/main/decaf/net/BufferedSocket.h>
```

Inheritance diagram for decaf::net::BufferedSocket:

Public Member Functions

- **BufferedSocket** (**Socket** *socket, int inputBufferSize=1000, int outputBufferSize=1000, bool own=true)
Constructs a new Buffered socket object.
- virtual **~BufferedSocket** ()
- virtual void **connect** (const char *host, int port) throw (SocketException)
Connects to the specified destination.
- virtual void **close** () throw (decaf::io::IOException)
Closes this object and deallocates the appropriate resources.
- virtual bool **isConnected** () const
Indicates whether or not this socket is connected to a destination.
- virtual **io::InputStream** * **getInputStream** ()
Gets the InputStream for this socket.
- virtual **io::OutputStream** * **getOutputStream** ()
Gets the OutputStream for this socket.
- virtual int **getSoLinger** () const throw (SocketException)
Gets the linger time.
- virtual void **setSoLinger** (int linger) throw (SocketException)
Sets the linger time.
- virtual bool **getKeepAlive** () const throw (SocketException)
Gets the keep alive flag.
- virtual void **setKeepAlive** (bool keepAlive) throw (SocketException)
Enables/disables the keep alive flag.

- virtual int **getReceiveBufferSize** () const throw (SocketException)
Gets the receive buffer size.
- virtual void **setReceiveBufferSize** (int size) throw (SocketException)
Sets the receive buffer size.
- virtual bool **getReuseAddress** () const throw (SocketException)
Gets the reuse address flag.
- virtual void **setReuseAddress** (bool reuse) throw (SocketException)
Sets the reuse address flag.
- virtual int **getSendBufferSize** () const throw (SocketException)
Gets the send buffer size.
- virtual void **setSendBufferSize** (int size) throw (SocketException)
Sets the send buffer size.
- virtual int **getSoTimeout** () const throw (SocketException)
Gets the timeout for socket operations.
- virtual void **setSoTimeout** (int timeout) throw (SocketException)
Sets the timeout for socket operations.

6.141.1 Detailed Description

Buffered **Socket** (p.2786) class that wraps a **Socket** (p.2786) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes.

6.141.2 Constructor & Destructor Documentation

6.141.2.1 decaf::net::BufferedSocket::BufferedSocket (Socket * *socket*, int *inputBufferSize* = 1000, int *outputBufferSize* = 1000, bool *own* = true)

Constructs a new Buffered socket object.

Parameters

socket the socket to buffer

inputBufferSize size of the input buffer

outputBufferSize size of the output buffer

own does this object own the passed socket

6.141.2.2 virtual decaf::net::BufferedSocket::~~BufferedSocket () [virtual]

6.141.3 Member Function Documentation

6.141.3.1 virtual void decaf::net::BufferedSocket::close () throw (decaf::io::IOException) [virtual]

Closes this object and deallocates the appropriate resources.

Exceptions

IOException

Implements decaf::io::Closeable (p. 951).

6.141.3.2 virtual void decaf::net::BufferedSocket::connect (const char * *host*, int *port*) throw (SocketException) [virtual]

Connects to the specified destination.

Closes this socket if connected to another destination.

Parameters

host The host of the server to connect to.

port The port of the server to connect to.

Exceptions

IOException Thrown if a failure occurred in the connect.

Implements decaf::net::Socket (p. 2787).

6.141.3.3 virtual io::InputStream* decaf::net::BufferedSocket::getInputStream () [inline, virtual]

Gets the InputStream for this socket.

Returns

The InputStream for this socket. NULL if not connected.

Implements decaf::net::Socket (p. 2788).

6.141.3.4 virtual bool decaf::net::BufferedSocket::getKeepAlive () const throw (SocketException) [inline, virtual]

Gets the keep alive flag.

Returns

True if keep alive is enabled.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2788).

References **decaf::net::Socket::getKeepAlive()**.

6.141.3.5 `virtual io::OutputStream* decaf::net::BufferedSocket::getOutputStream () [inline, virtual]`

Gets the OutputStream for this socket.

Returns

the OutputStream for this socket. NULL if not connected.

Implements **decaf::net::Socket** (p. 2788).

6.141.3.6 `virtual int decaf::net::BufferedSocket::getReceiveBufferSize () const throw (SocketException) [inline, virtual]`

Gets the receive buffer size.

Returns

the receive buffer size in bytes.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2788).

References **decaf::net::Socket::getReceiveBufferSize()**.

6.141.3.7 `virtual bool decaf::net::BufferedSocket::getReuseAddress () const throw (SocketException) [inline, virtual]`

Gets the reuse address flag.

Returns

True if the address can be reused.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2789).

References **decaf::net::Socket::getReuseAddress()**.

6.141.3.8 `virtual int decaf::net::BufferedSocket::getSendBufferSize () const throw (SocketException) [inline, virtual]`

Gets the send buffer size.

Returns

the size in bytes of the send buffer.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2789).

References `decaf::net::Socket::getSendBufferSize()`.

6.141.3.9 `virtual int decaf::net::BufferedSocket::getSoLinger () const throw (SocketException) [inline, virtual]`

Gets the linger time.

Returns

The linger time in seconds.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2789).

References `decaf::net::Socket::getSoLinger()`.

6.141.3.10 `virtual int decaf::net::BufferedSocket::getSoTimeout () const throw (SocketException) [inline, virtual]`

Gets the timeout for socket operations.

Returns

The timeout in milliseconds for socket operations.

Exceptions

SocketException (p. 2793) Thrown if unable to retrieve the information.

Implements **decaf::net::Socket** (p. 2790).

References `decaf::net::Socket::getSoTimeout()`.

6.141.3.11 `virtual bool decaf::net::BufferedSocket::isConnected () const [inline, virtual]`

Indicates whether or not this socket is connected to a destination.

Returns

true if connected

Implements **decaf::net::Socket** (p. 2790).

References `decaf::net::Socket::isConnected()`.

6.141.3.12 `virtual void decaf::net::BufferedSocket::setKeepAlive (bool keepAlive) throw (SocketException) [inline, virtual]`

Enables/disables the keep alive flag.

Parameters

keepAlive If true, enables the flag.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2790).

References `decaf::net::Socket::setKeepAlive()`.

6.141.3.13 `virtual void decaf::net::BufferedSocket::setReceiveBufferSize (int size) throw (SocketException) [inline, virtual]`

Sets the receive buffer size.

Parameters

size Number of bytes to set the receive buffer to.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2790).

References `decaf::net::Socket::setReceiveBufferSize()`.

6.141.3.14 `virtual void decaf::net::BufferedSocket::setReuseAddress (bool reuse) throw (SocketException) [inline, virtual]`

Sets the reuse address flag.

Parameters

reuse If true, sets the flag.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements **decaf::net::Socket** (p. 2791).

References `decaf::net::Socket::setReuseAddress()`.

6.141.3.15 `virtual void decaf::net::BufferedSocket::setSendBufferSize (int size)
throw (SocketException)` [inline, virtual]

Sets the send buffer size.

Parameters

size The number of bytes to set the send buffer to.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements `decaf::net::Socket` (p. 2791).

References `decaf::net::Socket::setSendBufferSize()`.

6.141.3.16 `virtual void decaf::net::BufferedSocket::setSoLinger (int linger)
throw (SocketException)` [inline, virtual]

Sets the linger time.

Parameters

linger The linger time in seconds. If 0, linger is off.

Exceptions

SocketException (p. 2793) if the operation fails.

Implements `decaf::net::Socket` (p. 2791).

References `decaf::net::Socket::setSoLinger()`.

6.141.3.17 `virtual void decaf::net::BufferedSocket::setSoTimeout (int timeout)
throw (SocketException)` [inline, virtual]

Sets the timeout for socket operations.

Parameters

timeout The timeout in milliseconds for socket operations.

Exceptions

SocketException (p. 2793) Thrown if unable to set the information.

Implements `decaf::net::Socket` (p. 2792).

References `decaf::net::Socket::setSoTimeout()`.

Wraps the passed buffer with a new ShortBuffer.
- static **decaf::nio::ShortBuffer * createShortBuffer** (std::vector< short > &buffer)
Wraps the passed STL Short Vector in a ShortBuffer.

6.142.1 Detailed Description

Factory class used by static methods in the **decaf::nio** (p.109) package to create the various default version of the NIO interfaces.

6.142.2 Constructor & Destructor Documentation

6.142.2.1 `virtual decaf::internal::nio::BufferFactory::~BufferFactory () [inline, virtual]`

6.142.3 Member Function Documentation

6.142.3.1 `static decaf::nio::ByteBuffer* decaf::internal::nio::BufferFactory::createByteBuffer (std::size_t capacity) [static]`

Allocates a new byte buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters

capacity - the internal buffer's capacity.

Returns

a newly allocated ByteBuffer which the caller owns.

6.142.3.2 `static decaf::nio::ByteBuffer* decaf::internal::nio::BufferFactory::createByteBuffer (unsigned char * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new ByteBuffer.

The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be array.length, its position will be offset, its limit will be offset + length, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns

a new ByteBuffer that is backed by buffer, caller owns.

6.142.3.3 `static decaf::nio::ByteBuffer* decaf::internal::nio::BufferFactory::createByteBuffer (std::vector< unsigned char > & buffer) [static]`

Wraps the passed STL Byte Vector in a ByteBuffer.

The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be buffer.size(), its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns

a new ByteBuffer that is backed by buffer, caller owns.

6.142.3.4 `static decaf::nio::CharBuffer* decaf::internal::nio::BufferFactory::createCharBuffer (std::size_t capacity) [static]`

Allocates a new char buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters

capacity - the internal buffer's capacity.

Returns

a newly allocated CharBuffer which the caller owns.

6.142.3.5 `static decaf::nio::CharBuffer* decaf::internal::nio::BufferFactory::createCharBuffer (char * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new CharBuffer.

The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns

a new CharBuffer that is backed by buffer, caller owns.

6.142.3.6 `static decaf::nio::CharBuffer* decaf::internal::nio::BufferFactory::createCharBuffer (std::vector< char > & buffer) [static]`

Wraps the passed STL Byte Vector in a CharBuffer.

The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its

position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns

a new `CharBuffer` that is backed by *buffer*, caller owns.

6.142.3.7 `static decaf::nio::DoubleBuffer* decaf::internal::nio::BufferFactory::createDoubleBuffer (double * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new `DoubleBuffer`.

The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The array that will back the new buffer
offset - The offset of the subarray to be used
length - The length of the subarray to be used

Returns

a new `DoubleBuffer` that is backed by *buffer*, caller owns.

6.142.3.8 `static decaf::nio::DoubleBuffer* decaf::internal::nio::BufferFactory::createDoubleBuffer (std::vector< double > & buffer) [static]`

Wraps the passed STL Double Vector in a `DoubleBuffer`.

The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns

a new `DoubleBuffer` that is backed by *buffer*, caller owns.

6.142.3.9 `static decaf::nio::DoubleBuffer* decaf::internal::nio::BufferFactory::createDoubleBuffer (std::size_t capacity) [static]`

Allocates a new double buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters

capacity - the internal buffer's capacity.

Returns

a newly allocated DoubleBuffer which the caller owns.

6.142.3.10 `static decaf::nio::FloatBuffer* decaf::internal::nio::BufferFactory::createFloatBuffer (std::size_t capacity) [static]`

Allocates a new float buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters

capacity - the internal buffer's capacity.

Returns

a newly allocated DoubleBuffer which the caller owns.

6.142.3.11 `static decaf::nio::FloatBuffer* decaf::internal::nio::BufferFactory::createFloatBuffer (float * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new FloatBuffer.

The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be array.length, its position will be offset, its limit will be offset + length, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns

a new DoubleBuffer that is backed by buffer, caller owns.

6.142.3.12 `static decaf::nio::FloatBuffer* decaf::internal::nio::BufferFactory::createFloatBuffer (std::vector< float > & buffer) [static]`

Wraps the passed STL Float Vector in a FloatBuffer.

The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.13 `static decaf::nio::IntBuffer* decaf::internal::nio::BufferFactory::createIntBuffer (std::size_t capacity) [static]`

Allocates a new int buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters

capacity - the internal buffer's capacity.

Returns

a newly allocated DoubleBuffer which the caller owns.

6.142.3.14 `static decaf::nio::IntBuffer* decaf::internal::nio::BufferFactory::createIntBuffer (std::vector< int > & buffer) [static]`

Wraps the passed STL int Vector in a IntBuffer.

The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.15 `static decaf::nio::IntBuffer* decaf::internal::nio::BufferFactory::createIntBuffer (int * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new IntBuffer.

The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be array.length, its position will be offset, its limit will be offset + length, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The array that will back the new buffer
offset - The offset of the subarray to be used
length - The length of the subarray to be used

Returns

a new DoubleBuffer that is backed by buffer, caller owns.

6.142.3.16 `static decaf::nio::LongBuffer* decaf::internal::nio::BufferFactory::createLongBuffer (std::vector< long long > & buffer) [static]`

Wraps the passed STL Long Vector in a LongBuffer.

The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be buffer.size(), its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling vector.resize(N).

Returns

a new DoubleBuffer that is backed by buffer, caller owns.

6.142.3.17 `static decaf::nio::LongBuffer* decaf::internal::nio::BufferFactory::createLongBuffer (std::size_t capacity) [static]`

Allocates a new long long buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters

capacity - the internal buffer's capacity.

Returns

a newly allocated DoubleBuffer which the caller owns.

6.142.3.18 `static decaf::nio::LongBuffer* decaf::internal::nio::BufferFactory::createLongBuffer (long long * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new LongBuffer.

The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be array.length, its position will be offset, its limit will be offset + length, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns

a new DoubleBuffer that is backed by buffer, caller owns.

6.142.3.19 `static decaf::nio::ShortBuffer* decaf::internal::nio::BufferFactory::createShortBuffer (std::size_t capacity) [static]`

Allocates a new short buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters

capacity - the internal buffer's capacity.

Returns

a newly allocated DoubleBuffer which the caller owns.

6.142.3.20 `static decaf::nio::ShortBuffer* decaf::internal::nio::BufferFactory::createShortBuffer (short * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new ShortBuffer.

The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be array.length, its position will be offset, its limit will be offset + length, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns

a new DoubleBuffer that is backed by buffer, caller owns.

6.142.3.21 `static decaf::nio::ShortBuffer* decaf::internal::nio::BufferFactory::createShortBuffer (std::vector< short > & buffer) [static]`

Wraps the passed STL Short Vector in a ShortBuffer.

The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be buffer.size(), its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling vector.resize(N).

Returns

a new DoubleBuffer that is backed by buffer, caller owns.

The documentation for this class was generated from the following file:

6.143 decaf::nio::BufferOverflowException Class Reference

```
#include <src/main/decaf/nio/BufferOverflowException.h>
```

Inheritance diagram for decaf::nio::BufferOverflowException:

Public Member Functions

- **BufferOverflowException** () throw ()
Default Constructor.
- **BufferOverflowException** (const lang::Exception &ex) throw ()
Copy Constructor.
- **BufferOverflowException** (const BufferOverflowException &ex) throw ()
Copy Constructor.
- **BufferOverflowException** (const char *file, const int lineNumber, const std::exception *cause, const char *msg,...) throw ()

Constructor - Initializes the file name and line number where this message occurred.

- **BufferOverflowException** (const std::exception **cause*) throw ()
Constructor.
- **BufferOverflowException** (const char **file*, const int *lineNumber*, const char **msg*,...) throw ()
Constructor.
- virtual **BufferOverflowException** * **clone** () const
Clones this exception.
- virtual ~**BufferOverflowException** () throw ()

6.143.1 Constructor & Destructor Documentation

6.143.1.1 decaf::nio::BufferOverflowException::BufferOverflowException ()
throw () [inline]

Default Constructor.

6.143.1.2 decaf::nio::BufferOverflowException::BufferOverflowException (const
lang::Exception & *ex*) throw () [inline]

Copy Constructor.

Parameters

ex the exception to copy

6.143.1.3 decaf::nio::BufferOverflowException::BufferOverflowException (const
BufferOverflowException & *ex*) throw () [inline]

Copy Constructor.

Parameters

ex the exception to copy, which is an instance of this type

6.143.1.4 decaf::nio::BufferOverflowException::BufferOverflowException (const
char * *file*, const int *lineNumber*, const std::exception * *cause*, const
char * *msg*, ...) throw () [inline]

Constructor - Initializes the file name and line number where this message occurred.

Sets the message to report, using an optional list of arguments to parse into the message

Parameters

file The file name where exception occurs

lineNumber The line number where the exception occurred.

cause The exception that was the cause for this one to be thrown.

msg The message to report

... list of primitives that are formatted into the message

6.143.1.5 `decaf::nio::BufferOverflowException::BufferOverflowException (const std::exception * cause) throw () [inline]`

Constructor.

Parameters

cause Pointer to the exception that caused this one to be thrown, the object is cloned caller retains ownership.

6.143.1.6 `decaf::nio::BufferOverflowException::BufferOverflowException (const char * file, const int lineNumber, const char * msg, ...) throw () [inline]`

Constructor.

Parameters

file The file name where exception occurs

lineNumber The line number where the exception occurred.

msg The message to report

... list of primitives that are formatted into the message

6.143.1.7 `virtual decaf::nio::BufferOverflowException::~~BufferOverflowException () throw () [inline, virtual]`

6.143.2 Member Function Documentation

6.143.2.1 `virtual BufferOverflowException* decaf::nio::BufferOverflowException::clone () const [inline, virtual]`

Clones this exception.

This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Reimplemented from `decaf::lang::Exception` (p. 1479).

The documentation for this class was generated from the following file:

- `src/main/decaf/nio/BufferOverflowException.h`

6.144 decaf::nio::BufferUnderflowException Class Reference

6.144.1 Constructor & Destructor Documentation

6.144.1.1 decaf::nio::BufferUnderflowException::BufferUnderflowException () throw () [inline]

Default Constructor.

6.144.1.2 decaf::nio::BufferUnderflowException::BufferUnderflowException (const lang::Exception & ex) throw () [inline]

Copy Constructor.

Parameters

ex the exception to copy

6.144.1.3 `decaf::nio::BufferUnderflowException::BufferUnderflowException (const BufferUnderflowException & ex) throw () [inline]`

Copy Constructor.

Parameters

ex the exception to copy, which is an instance of this type

6.144.1.4 `decaf::nio::BufferUnderflowException::BufferUnderflowException (const char * file, const int lineNumber, const std::exception * cause, const char * msg, ...) throw () [inline]`

Constructor - Initializes the file name and line number where this message occurred.

Sets the message to report, using an optional list of arguments to parse into the message

Parameters

file The file name where exception occurs

lineNumber The line number where the exception occurred.

cause The exception that was the cause for this one to be thrown.

msg The message to report

... list of primitives that are formatted into the message

6.144.1.5 `decaf::nio::BufferUnderflowException::BufferUnderflowException (const std::exception * cause) throw () [inline]`

Constructor.

Parameters

cause Pointer to the exception that caused this one to be thrown, the object is cloned caller retains ownership.

6.144.1.6 `decaf::nio::BufferUnderflowException::BufferUnderflowException (const char * file, const int lineNumber, const char * msg, ...) throw () [inline]`

Constructor.

Parameters

file The file name where exception occurs

lineNumber The line number where the exception occurred.

msg The message to report

... list of primitives that are formatted into the message

6.144.1.7 virtual
decaf::nio::BufferUnderflowException::~~BufferUnderflowException ()
throw () [inline, virtual]

6.144.2 Member Function Documentation

6.145 decaf::lang::Byte Class Reference

```
#include <src/main/decaf/lang/Byte.h>
```

Inheritance diagram for decaf::lang::Byte:

Public Member Functions

- **Byte** (unsigned char value)
- **Byte** (const std::string &value) throw (exceptions::NumberFormatException)
- virtual **~Byte** ()
- virtual int **compareTo** (const **Byte** &c) const
*Compares this **Byte** (p. 776) instance with another.*
- virtual bool **operator==** (const **Byte** &c) const
Compares equality between this object and the one passed.
- virtual bool **operator<** (const **Byte** &c) const
Compares this object to another and returns true if this object is considered to be less than the one passed.
- virtual int **compareTo** (const unsigned char &c) const
*Compares this **Byte** (p. 776) instance with a char type.*
- virtual bool **operator==** (const unsigned char &c) const
Compares equality between this object and the one passed.
- virtual bool **operator<** (const unsigned char &c) const

Compares this object to another and returns true if this object is considered to be less than the one passed.

- bool **equals** (const **Byte** &c) const
- bool **equals** (const unsigned char &c) const
- std::string **toString** () const
- virtual double **doubleValue** () const

Answers the double value which the receiver represents.

- virtual float **floatValue** () const

Answers the float value which the receiver represents.

- virtual unsigned char **byteValue** () const

Answers the byte value which the receiver represents.

- virtual short **shortValue** () const

Answers the short value which the receiver represents.

- virtual int **intValue** () const

Answers the int value which the receiver represents.

- virtual long long **longValue** () const

Answers the long value which the receiver represents.

Static Public Member Functions

- static std::string **toString** (unsigned char value)
- static **Byte decode** (const std::string &value) throw (exceptions::NumberFormatException)

*Decodes a String into a **Byte** (p. 776).*

- static unsigned char **parseByte** (const std::string &s, int radix) throw (exceptions::NumberFormatException)

Parses the string argument as a signed unsigned char in the radix specified by the second argument.

- static unsigned char **parseByte** (const std::string &s) throw (exceptions::NumberFormatException)

Parses the string argument as a signed decimal unsigned char.

- static **Byte valueOf** (unsigned char value)

*Returns a **Character** (p. 914) instance representing the specified char value.*

- static **Byte valueOf** (const std::string &value) throw (exceptions::NumberFormatException)

*Returns a **Byte** (p. 776) object holding the value given by the specified std::string.*

- static **Byte valueOf** (const std::string &value, int radix) throw (exceptions::NumberFormatException)

*Returns a **Byte** (p. 776) object holding the value extracted from the specified `std::string` when parsed with the radix given by the second argument.*

Static Public Attributes

- static const unsigned char **MIN_VALUE** = 0x7F
The minimum value that a unsigned char can take on.
- static const unsigned char **MAX_VALUE** = 0x80
The maximum value that a unsigned char can take on.
- static const int **SIZE** = 8
The size of the primitive charactor in bits.

6.145.1 Constructor & Destructor Documentation

6.145.1.1 decaf::lang::Byte::Byte (unsigned char value)

Parameters

value - the primitive value to wrap

6.145.1.2 decaf::lang::Byte::Byte (const std::string & value) throw (exceptions::NumberFormatException)

Parameters

value - the string to convert to an unsigned char

Exceptions

NumberFormatException

6.145.1.3 virtual decaf::lang::Byte::~~Byte () [inline, virtual]

6.145.2 Member Function Documentation

6.145.2.1 virtual unsigned char decaf::lang::Byte::byteValue () const [inline, virtual]

Answers the byte value which the receiver represents.

Returns

byte the value of the receiver.

6.145.2.2 `virtual int decaf::lang::Byte::compareTo (const unsigned char & c)`
`const [inline, virtual]`

Compares this **Byte** (p. 776) instance with a char type.

Parameters

c - the char instance to be compared

Returns

zero if this object represents the same char value as the argument; a positive value if this object represents a value greater than the passed in value, and -1 if this object represents a value less than the passed in value.

Implements **decaf::lang::Comparable**< **unsigned char** > (p. 1010).

6.145.2.3 `virtual int decaf::lang::Byte::compareTo (const Byte & c) const`
`[inline, virtual]`

Compares this **Byte** (p. 776) instance with another.

Parameters

c - the **Byte** (p. 776) instance to be compared

Returns

zero if this object represents the same char value as the argument; a positive value if this object represents a value greater than the passed in value, and -1 if this object represents a value less than the passed in value.

6.145.2.4 `static Byte decaf::lang::Byte::decode (const std::string & value) throw`
`(exceptions::NumberFormatException) [static]`

Decodes a String into a **Byte** (p. 776).

Accepts decimal, hexadecimal, and octal numbers given by the following grammar:

The sequence of characters following an (optional) negative sign and/or radix specifier ("0x", "0X", "#", or leading zero) is parsed as by the **Byte::parseByte** (p. 782) method with the indicated radix (10, 16, or 8). This sequence of characters must represent a positive value or a **NumberFormatException** will be thrown. The result is negated if first character of the specified String is the minus sign. No whitespace characters are permitted in the string.

Parameters

value - The string to decode

Returns

a **Byte** (p. 776) object containing the decoded value

Exceptions

NumberFormatException if the string is not formatted correctly.

6.145.2.5 `virtual double decaf::lang::Byte::doubleValue () const [inline, virtual]`

Answers the double value which the receiver represents.

Returns

double the value of the receiver.

6.145.2.6 `bool decaf::lang::Byte::equals (const unsigned char & c) const [inline, virtual]`

Returns

true if the two Bytes have the same value.

Implements `decaf::lang::Comparable< unsigned char >` (p. 1010).

6.145.2.7 `bool decaf::lang::Byte::equals (const Byte & c) const [inline]`

Returns

true if the two **Byte** (p. 776) Objects have the same value.

6.145.2.8 `virtual float decaf::lang::Byte::floatValue () const [inline, virtual]`

Answers the float value which the receiver represents.

Returns

float the value of the receiver.

6.145.2.9 `virtual int decaf::lang::Byte::intValue () const [inline, virtual]`

Answers the int value which the receiver represents.

Returns

int the value of the receiver.

6.145.2.10 `virtual long long decaf::lang::Byte::longValue () const [inline, virtual]`

Answers the long value which the receiver represents.

Returns

long long the value of the receiver.

6.145.2.11 `virtual bool decaf::lang::Byte::operator< (const unsigned char & c) const [inline, virtual]`

Compares this object to another and returns true if this object is considered to be less than the one passed.

This

Parameters

`c` - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

Implements `decaf::lang::Comparable< unsigned char >` (p. 1011).

6.145.2.12 `virtual bool decaf::lang::Byte::operator< (const Byte & c) const [inline, virtual]`

Compares this object to another and returns true if this object is considered to be less than the one passed.

This

Parameters

`c` - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

6.145.2.13 `virtual bool decaf::lang::Byte::operator== (const Byte & c) const [inline, virtual]`

Compares equality between this object and the one passed.

Parameters

`c` - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

6.145.2.14 `virtual bool decaf::lang::Byte::operator== (const unsigned char & c) const [inline, virtual]`

Compares equality between this object and the one passed.

Parameters

`c` - the value to be compared to this one.

Returns

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable**< unsigned char > (p.1011).

6.145.2.15 static unsigned char decaf::lang::Byte::parseByte (const std::string & s) throw (exceptions::NumberFormatException) [static]

Parses the string argument as a signed decimal unsigned char.

The characters in the string must all be decimal digits, except that the first character may be an ASCII minus sign '-' to indicate a negative value. The resulting unsigned char value is returned, exactly as if the argument and the radix 10 were given as arguments to the parseByte(const std::string, int) method.

Parameters

s - String to convert to a unsigned char

Returns

the converted unsigned char value

Exceptions

NumberFormatException if the string is not a unsigned char.

6.145.2.16 static unsigned char decaf::lang::Byte::parseByte (const std::string & s, int radix) throw (exceptions::NumberFormatException) [static]

Parses the string argument as a signed unsigned char in the radix specified by the second argument.

The characters in the string must all be digits, of the specified radix (as determined by whether **Character.digit(char, int)** (p.917) returns a nonnegative value) except that the first character may be an ASCII minus sign '-' to indicate a negative value. The resulting byte value is returned.

An exception of type *NumberFormatException* is thrown if any of the following situations occurs:
* The first argument is null or is a string of length zero. * The radix is either smaller than **Character.MIN_RADIX** (p.921) or larger than **Character::MAX_RADIX** (p.921). * Any character of the string is not a digit of the specified radix, except that the first character may be a minus sign '-' provided that the string is longer than length 1. * The value represented by the string is not a value of type unsigned char.

Parameters

s - the String containing the unsigned char to be parsed

radix - the radix to be used while parsing s

Returns

the unsigned char represented by the string argument in the specified radix.

Exceptions

NumberFormatException - If String does not contain a parsable unsigned char.

6.145.2.17 `virtual short decaf::lang::Byte::shortValue () const` [inline, virtual]

Answers the short value which the receiver represents.

Returns

short the value of the receiver.

6.145.2.18 `static std::string decaf::lang::Byte::toString (unsigned char value)`
[static]**Returns**

a string representing the primitive value as Base 10

6.145.2.19 `std::string decaf::lang::Byte::toString () const`**Returns**

this **Byte** (p. 776) Object as a String Representation

6.145.2.20 `static Byte decaf::lang::Byte::valueOf (unsigned char value)`
[inline, static]

Returns a **Character** (p. 914) instance representing the specified char value.

Parameters

value - the primitive char to wrap.

Returns

a new **Character** (p. 914) instance that wraps this value.

6.145.2.21 `static Byte decaf::lang::Byte::valueOf (const std::string & value, int radix) throw (exceptions::NumberFormatException)` [static]

Returns a **Byte** (p. 776) object holding the value extracted from the specified std::string when parsed with the radix given by the second argument.

The first argument is interpreted as representing a signed unsigned char in the radix specified by the second argument, exactly as if the argument were given to the `parseByte(std::string, int)` method. The result is a **Byte** (p. 776) object that represents the unsigned char value specified by the string.

Parameters

value - std::string to parse as base (radix)

radix - base of the string to parse.

Returns

new **Byte** (p. 776) Object wrapping the primitive

Exceptions

NumberFormatException if the string is not a valid unsigned char.

6.145.2.22 `static Byte decaf::lang::Byte::valueOf (const std::string & value)
throw (exceptions::NumberFormatException) [static]`

Returns a **Byte** (p. 776) object holding the value given by the specified std::string.

The argument is interpreted as representing a signed decimal unsigned char, exactly as if the argument were given to the `parseByte(std::string)` method. The result is a **Byte** (p. 776) object that represents the unsigned char value specified by the string.

Parameters

value - std::string to parse as base 10

Returns

new **Byte** (p. 776) Object wrapping the primitive

Exceptions

NumberFormatException if the string is not a decimal unsigned char.

6.145.3 Field Documentation

6.145.3.1 `const unsigned char decaf::lang::Byte::MAX_VALUE = 0x80 [static]`

The maximum value that a unsigned char can take on.

6.145.3.2 `const unsigned char decaf::lang::Byte::MIN_VALUE = 0x7F [static]`

The minimum value that a unsigned char can take on.

6.145.3.3 `const int decaf::lang::Byte::SIZE = 8 [static]`

The size of the primitive charactor in bits.

The documentation for this class was generated from the following file:

- `src/main/decaf/lang/Byte.h`

6.146 decaf::internal::util::ByteArrayAdapter Class Reference

This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data.

```
#include <src/main/decaf/internal/util/ByteArrayAdapter.h>
```

Inheritance diagram for `decaf::internal::util::ByteArrayAdapter`:

Data Structures

- union **Array**

Public Member Functions

- **ByteArrayAdapter** (std::size_t capacity)
Creates a byte array object that is allocated internally and is then owned and deleted when this object is deleted.
- **ByteArrayAdapter** (unsigned char *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (char *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (double *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (float *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (long long *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (int *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (short *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- virtual ~**ByteArrayAdapter** ()
- virtual std::size_t **getCapacity** () const
Gets the capacity of the underlying array.
- virtual std::size_t **getCharCapacity** () const
Gets the capacity of the underlying array as if it contains chars.
- virtual std::size_t **getDoubleCapacity** () const
Gets the capacity of the underlying array as if it contains doubles.
- virtual std::size_t **getFloatCapacity** () const
Gets the capacity of the underlying array as if it contains doubles.

- virtual std::size_t **getLongCapacity** () const
Gets the capacity of the underlying array as if it contains doubles.
- virtual std::size_t **getIntCapacity** () const
Gets the capacity of the underlying array as if it contains ints.
- virtual std::size_t **getShortCapacity** () const
Gets the capacity of the underlying array as if it contains shorts.
- virtual unsigned char * **getByteArray** ()
Gets the pointer to the array we are wrapping.
- virtual char * **getCharArray** ()
Gets the pointer to the array we are wrapping.
- virtual short * **getShortArray** ()
Gets the pointer to the array we are wrapping.
- virtual int * **getIntArray** ()
Gets the pointer to the array we are wrapping.
- virtual long long * **getLongArray** ()
Gets the pointer to the array we are wrapping.
- virtual double * **getDoubleArray** ()
Gets the pointer to the array we are wrapping.
- virtual float * **getFloatArray** ()
Gets the pointer to the array we are wrapping.
- virtual void **read** (unsigned char *buffer, std::size_t offset, std::size_t length) const throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferUnderflowException)
Reads from the Byte array starting at the specified offset and reading the specified length.
- virtual void **write** (unsigned char *buffer, std::size_t offset, std::size_t length) throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferOverflowException)
Writes from the Byte array given, starting at the specified offset and writing the specified amount of data into this objects internal array.
- virtual void **resize** (std::size_t capacity) throw (lang::exceptions::InvalidStateException)
Resizes the underlying array to the new given capacity, preserving all the Data that was previously in the array, unless the resize is smaller than the current size in which case only the data that will fit into the new array is preserved.
- virtual void **clear** ()
Clear all data from that Array, setting the underlying bytes to zero.
- unsigned char & **operator[]** (std::size_t index) throw (decaf::lang::exceptions::IndexOutOfBoundsException)

*Allows the **ByteArrayAdapter** (p. 784) to be indexed as a standard array.*

- `const unsigned char & operator[] (std::size_t index) const throw (decaf::lang::exceptions::IndexOutOfBoundsException)`
- `virtual unsigned char get (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Absolute get method.

- `virtual char getChar (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads one byte at the given index and returns it.

- `virtual double getDouble (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads eight bytes at the given index and returns it.

- `virtual double getDoubleAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads eight bytes at the given byte index and returns it.

- `virtual float getFloat (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads four bytes at the given index and returns it.

- `virtual float getFloatAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads four bytes at the given byte index and returns it.

- `virtual long long getLong (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads eight bytes at the given index and returns it.

- `virtual long long getLongAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads eight bytes at the given byte index and returns it.

- `virtual int getInt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads four bytes at the given index and returns it.

- `virtual int getIntAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads four bytes at the given byte index and returns it.

- `virtual short getShort (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads two bytes at the given index and returns it.

- `virtual short getShortAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`

Reads two bytes at the given byte index and returns it.

- virtual **ByteArrayAdapter** & **put** (std::size_t index, unsigned char value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes the given byte into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putChar** (std::size_t index, char value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes one byte containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putDouble** (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putDoubleAt** (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given byte index.
- virtual **ByteArrayAdapter** & **putFloat** (std::size_t index, float value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putFloatAt** (std::size_t index, float value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given byte index.
- virtual **ByteArrayAdapter** & **putLong** (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putLongAt** (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given byte index.
- virtual **ByteArrayAdapter** & **putInt** (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putIntAt** (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given byte index.
- virtual **ByteArrayAdapter** & **putShort** (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes two bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putShortAt** (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes two bytes containing the given value, into this buffer at the given byte index.

6.146.1 Detailed Description

This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data. All the array types are mapped down to a byte array and methods are supplied for accessing the data in any of the primitive type forms.

Methods in this class that do not return a specific value return a reference to this object so that calls can be chained.

6.146.2 Constructor & Destructor Documentation

6.146.2.1 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (std::size_t capacity)`

Creates a byte array object that is allocated internally and is then owned and deleted when this object is deleted.

The array is initially created with all elements initialized to zero.

Parameters

capacity - size of the array, this is the limit we read and write to.

6.146.2.2 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (unsigned char * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions

NullPointerException if buffer is NULL

6.146.2.3 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (char * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions

NullPointerException if buffer is NULL

6.146.2.4 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (double * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions

NullPointerException if buffer is NULL

6.146.2.5 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (float * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions

NullPointerException if buffer is NULL

6.146.2.6 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (long long * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions

NullPointerException if buffer is NULL

6.146.2.7 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (int
* array, std::size_t capacity, bool own = false) throw (
lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions

NullPointerException if buffer is NULL

6.146.2.8 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (short
* array, std::size_t capacity, bool own = false) throw (
lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions

NullPointerException if buffer is NULL

6.146.2.9 `virtual decaf::internal::util::ByteArrayAdapter::~~ByteArrayAdapter ()
[virtual]`

6.146.3 Member Function Documentation

6.146.3.1 `virtual void decaf::internal::util::ByteArrayAdapter::clear () [virtual]`

Clear all data from that Array, setting the underlying bytes to zero.

6.146.3.2 `virtual unsigned char decaf::internal::util::ByteArrayAdapter::get (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
[virtual]

Absolute get method.

Reads the byte at the given index.

Parameters

index - the index in the Buffer where the byte is to be read

Returns

the byte that is located at the given index

Exceptions

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

6.146.3.3 `virtual unsigned char* decaf::internal::util::ByteArrayAdapter::getByteArray ()`
[inline, virtual]

Gets the pointer to the array we are wrapping.

Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 784) objects that point to this array.

Returns

an unsigned char* pointer to the array this object wraps.

6.146.3.4 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getCapacity () const` [inline, virtual]

Gets the capacity of the underlying array.

Returns

the size the array.

6.146.3.5 `virtual char decaf::internal::util::ByteArrayAdapter::getChar (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
[inline, virtual]

Reads one byte at the given index and returns it.

Parameters

index - the index in the Buffer where the byte is to be read

Returns

the char at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

6.146.3.6 `virtual char* decaf::internal::util::ByteArrayAdapter::getCharArray ()`
[inline, virtual]

Gets the pointer to the array we are wrapping.

Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 784) objects that point to this array.

Returns

an char* pointer to the array this object wraps.

6.146.3.7 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getCharCapacity () const` [inline, virtual]

Gets the capacity of the underlying array as if it contains chars.

Returns

the size the array.

6.146.3.8 `virtual double decaf::internal::util::ByteArrayAdapter::getDouble (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)` [virtual]

Reads eight bytes at the given index and returns it.

The index is a relative to the size of the type to be read, in otherwords when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the double at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

**6.146.3.9 virtual double* decaf::internal::util::ByteArrayAdapter::getDoubleArray
() [inline, virtual]**

Gets the pointer to the array we are wrapping.

Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 784) objects that point to this array.

Returns

an double* pointer to the array this object wraps.

**6.146.3.10 virtual double decaf::internal::util::ByteArrayAdapter::getDoubleAt
(std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]**

Reads eight bytes at the given byte index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the double at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

**6.146.3.11 virtual std::size_t decaf::internal::util::ByteArrayAdapter::getDoubleCapacity
() const [inline, virtual]**

Gets the capacity of the underlying array as if it contains doubles.

Returns

the size the array.

**6.146.3.12 virtual float decaf::internal::util::ByteArrayAdapter::getFloat
(std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]**

Reads four bytes at the given index and returns it.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the float at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.13 `virtual float* decaf::internal::util::ByteArrayAdapter::getFloatArray () [inline, virtual]`

Gets the pointer to the array we are wrapping.

Changes to the data in this array are reflected by all **ByteArrayAdapter** (p.784) objects that point to this array.

Returns

an float* pointer to the array this object wraps.

6.146.3.14 `virtual float decaf::internal::util::ByteArrayAdapter::getFloatAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads four bytes at the given byte index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the float at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.15 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getFloatCapacity () const [inline, virtual]`

Gets the capacity of the underlying array as if it contains doubles.

Returns

the size the array.

6.146.3.16 `virtual int decaf::internal::util::ByteArrayAdapter::getInt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
[virtual]

Reads four bytes at the given index and returns it.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the int at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.17 `virtual int* decaf::internal::util::ByteArrayAdapter::getIntArray ()`
[inline, virtual]

Gets the pointer to the array we are wrapping.

Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 784) objects that point to this array.

Returns

an int* pointer to the array this object wraps.

6.146.3.18 `virtual int decaf::internal::util::ByteArrayAdapter::getIntAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
[virtual]

Reads four bytes at the given byte index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the int at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.19 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getIntCapacity () const [inline, virtual]`

Gets the capacity of the underlying array as if it contains ints.

Returns

the size the array.

6.146.3.20 `virtual long long decaf::internal::util::ByteArrayAdapter::getLong (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads eight bytes at the given index and returns it.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the long long at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.21 `virtual long long* decaf::internal::util::ByteArrayAdapter::getLongArray () [inline, virtual]`

Gets the pointer to the array we are wrapping.

Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 784) objects that point to this array.

Returns

an long long* pointer to the array this object wraps.

6.146.3.22 `virtual long long decaf::internal::util::ByteArrayAdapter::getLongAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads eight bytes at the given byte index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the long long at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.23 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getLongCapacity () const [inline, virtual]`

Gets the capacity of the underlying array as if it contains doubles.

Returns

the size the array.

6.146.3.24 `virtual short decaf::internal::util::ByteArrayAdapter::getShort (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads two bytes at the given index and returns it.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the short at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.25 `virtual short* decaf::internal::util::ByteArrayAdapter::getShortArray () [inline, virtual]`

Gets the pointer to the array we are wrapping.

Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 784) objects that point to this array.

Returns

an short* pointer to the array this object wraps.

6.146.3.26 `virtual short decaf::internal::util::ByteArrayAdapter::getShortAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads two bytes at the given byte index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the short at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.27 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getShortCapacity () const [inline, virtual]`

Gets the capacity of the underlying array as if it contains shorts.

Returns

the size the array.

6.146.3.28 `unsigned char& decaf::internal::util::ByteArrayAdapter::operator[] (std::size_t index) throw (decaf::lang::exceptions::IndexOutOfBoundsException)`

Allows the **ByteArrayAdapter** (p. 784) to be indexed as a standard array. calling the non const version allows the user to change the value at index

Parameters

index - the position in the array to access

Exceptions

IndexOutOfBoundsException

6.146.3.29 `const unsigned char& decaf::internal::util::ByteArrayAdapter::operator[]
 (std::size_t index) const throw (de-
 caf::lang::exceptions::IndexOutOfBoundsException
)`

6.146.3.30 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::put
 (std::size_t index, unsigned char value) throw (
 lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes the given byte into this buffer at the given index.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - position in the Buffer to write the data

value - the byte to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.31 `virtual ByteArrayAdapter& de-
 caf::internal::util::ByteArrayAdapter::putChar (std::size_t index,
 char value) throw (lang::exceptions::IndexOutOfBoundsException)
 [virtual]`

Writes one byte containing the given value, into this buffer at the given index.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.32 `virtual ByteArrayAdapter& de-
caf::internal::util::ByteArrayAdapter::putDouble
(std::size_t index, double value) throw (
lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes eight bytes containing the given value, into this buffer at the given index.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.33 `virtual ByteArrayAdapter& de-
caf::internal::util::ByteArrayAdapter::putDoubleAt
(std::size_t index, double value) throw (
lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes eight bytes containing the given value, into this buffer at the given byte index.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.34 `virtual ByteArrayAdapter& de-
caf::internal::util::ByteArrayAdapter::putFloat (std::size_t index,
float value) throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]`

Writes four bytes containing the given value, into this buffer at the given index.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.35 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putFloatAt (std::size_t index, float value) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes four bytes containing the given value, into this buffer at the given byte index.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.36 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putInt (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes four bytes containing the given value, into this buffer at the given index.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.37 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putIntAt (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes four bytes containing the given value, into this buffer at the given byte index.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.38 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putLong (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes eight bytes containing the given value, into this buffer at the given index.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.39 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putLongAt (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes eight bytes containing the given value, into this buffer at the given byte index.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.40 virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putShort (std::size_t *index*, short *value*) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]

Writes two bytes containing the given value, into this buffer at the given index.

The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.41 virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putShortAt (std::size_t *index*, short *value*) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]

Writes two bytes containing the given value, into this buffer at the given byte index.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.42 `virtual void decaf::internal::util::ByteArrayAdapter::read (unsigned char * buffer, std::size_t offset, std::size_t length) const throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferUnderflowException) [virtual]`

Reads from the Byte array starting at the specified offset and reading the specified length.

If the length is greater than the capacity of this underlying byte array then an BufferUnderflowException is thrown.

Parameters

buffer - the buffer to read data from this array into.

offset - position in this array to start reading from.

length - the amount of data to read from this array.

Exceptions

NullPointerException if buffer is null

BufferUnderflowException if there is not enough data to read because the offset or the length is greater than the size of this array.

6.146.3.43 `virtual void decaf::internal::util::ByteArrayAdapter::resize (std::size_t capacity) throw (lang::exceptions::InvalidStateException) [virtual]`

Resizes the underlying array to the new given capacity, preserving all the Data that was previously in the array, unless the resize is smaller than the current size in which case only the data that will fit into the new array is preserved.

A **ByteArrayAdapter** (p. 784) can only be resized when it owns the underlying array, if it does not then it will throw an *InvalidStateException*.

Parameters

capacity - the new capacity of the array.

Exceptions

InvalidStateException if this object does not own the buffer.

6.146.3.44 `virtual void decaf::internal::util::ByteArrayAdapter::write (unsigned char * buffer, std::size_t offset, std::size_t length) throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferOverflowException) [virtual]`

Writes from the Byte array given, starting at the specified offset and writing the specified amount of data into this objects internal array.

. If the length is greater than the capacity of this underlying byte array then an *BufferOverflowException* is thrown.

Parameters

buffer - the buffer to write get data written into this array.

offset - position in this array to start writing from.

length - the amount of data to write to this array.

Exceptions

NullPointerException if buffer is null

BufferOverflowException if the amount of data to be written to this array or the offset given are larger than this array's capacity.

The documentation for this class was generated from the following file:

- src/main/decaf/internal/util/ByteBufferAdapter.h

6.147 decaf::internal::nio::ByteBuffer Class Reference

This class defines six categories of operations upon byte buffers:

```
#include <src/main/decaf/internal/nio/ByteBuffer.h>
```

Inheritance diagram for decaf::internal::nio::ByteBuffer:

Public Member Functions

- **ByteBuffer** (std::size_t capacity, bool readOnly=false)
*Creates a **ByteBuffer** (p. 806) object that has its backing array allocated internally and is then owned and deleted when this object is deleted.*
- **ByteBuffer** (unsigned char *array, std::size_t offset, std::size_t capacity, bool readOnly=false) throw (decaf::lang::exceptions::NullPointerException)
*Creates a **ByteBuffer** (p. 806) object that wraps the given array.*
- **ByteBuffer** (ByteBufferPerspective &array, std::size_t offset, std::size_t length, bool readOnly=false) throw (decaf::lang::exceptions::IndexOutOfBoundsException)
*Creates a byte buffer that wraps the passed **ByteBufferPerspective** (p. 843) and start at the given offset.*
- **ByteBuffer** (const ByteBuffer &other)
*Create a **ByteBuffer** (p. 806) that mirrors this one, meaning it shares a reference to this buffers **ByteBufferPerspective** (p. 843) and when changes are made to that data it is reflected in both.*
- virtual ~ByteBuffer ()
- virtual bool isReadOnly () const
Tells whether or not this buffer is read-only.
- virtual unsigned char * array () throw (decaf::nio::ReadOnlyBufferException, decaf::lang::exceptions::UnsupportedOperationException)
Returns the byte array that backs this buffer.

- virtual `std::size_t arrayOffset () const throw (decaf::nio::ReadOnlyBufferException, lang::exceptions::UnsupportedOperationException)`
Returns the offset within this buffer's backing array of the first element of the buffer.
- virtual `bool hasArray () const`
Tells whether or not this buffer is backed by an accessible byte array.
- virtual `decaf::nio::CharBuffer * asCharBuffer () const`
Creates a view of this byte buffer as a char buffer.
- virtual `decaf::nio::DoubleBuffer * asDoubleBuffer () const`
Creates a view of this byte buffer as a double buffer.
- virtual `decaf::nio::FloatBuffer * asFloatBuffer () const`
Creates a view of this byte buffer as a float buffer.
- virtual `decaf::nio::IntBuffer * asIntBuffer () const`
Creates a view of this byte buffer as a int buffer.
- virtual `decaf::nio::LongBuffer * asLongBuffer () const`
Creates a view of this byte buffer as a long buffer.
- virtual `decaf::nio::ShortBuffer * asShortBuffer () const`
Creates a view of this byte buffer as a short buffer.
- virtual `ByteBuffer * asReadOnlyBuffer () const`
Creates a new, read-only byte buffer that shares this buffer's content.
- virtual `ByteBuffer & compact () throw (decaf::nio::ReadOnlyBufferException)`
Compacts this buffer.
- virtual `ByteBuffer * duplicate ()`
Creates a new byte buffer that shares this buffer's content.
- virtual `unsigned char get () const throw (decaf::nio::BufferUnderflowException)`
Relative get method.
- virtual `unsigned char get (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
Absolute get method.
- virtual `char getChar () throw (decaf::nio::BufferUnderflowException)`
Reads the next byte at this buffer's current position, and then increments the position by one.
- virtual `char getChar (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
Reads one byte at the given index and returns it.
- virtual `double getDouble () throw (decaf::nio::BufferUnderflowException)`

Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.

- virtual double **getDouble** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads eight bytes at the given index and returns it.

- virtual float **getFloat** () throw (decaf::nio::BufferUnderflowException)

Reads the next four bytes at this buffer's current position, and then increments the position by that amount.

- virtual float **getFloat** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads four bytes at the given index and returns it.

- virtual long long **getLong** () throw (decaf::nio::BufferUnderflowException)

Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.

- virtual long long **getLong** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads eight bytes at the given index and returns it.

- virtual int **getInt** () throw (decaf::nio::BufferUnderflowException)

Reads the next four bytes at this buffer's current position, and then increments the position by that amount.

- virtual int **getInt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads four bytes at the given index and returns it.

- virtual short **getShort** () throw (decaf::nio::BufferUnderflowException)

Reads the next two bytes at this buffer's current position, and then increments the position by that amount.

- virtual short **getShort** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads two bytes at the given index and returns it.

- virtual **ByteBuffer** & **put** (unsigned char value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes the given byte into this buffer at the current position, and then increments the position.

- virtual **ByteBuffer** & **put** (std::size_t index, unsigned char value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes the given byte into this buffer at the given index.

- virtual **ByteBuffer** & **putChar** (char value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes one byte containing the given value, into this buffer at the current position, and then increments the position by one.

- virtual **ByteBuffer** & **putChar** (std::size_t index, char value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)
Writes one byte containing the given value, into this buffer at the given index.
- virtual **ByteBuffer** & **putDouble** (double value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)
Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.
- virtual **ByteBuffer** & **putDouble** (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)
Writes eight bytes containing the given value, into this buffer at the given index.
- virtual **ByteBuffer** & **putFloat** (float value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)
Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.
- virtual **ByteBuffer** & **putFloat** (std::size_t index, float value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)
Writes four bytes containing the given value, into this buffer at the given index.
- virtual **ByteBuffer** & **putLong** (long long value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)
Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.
- virtual **ByteBuffer** & **putLong** (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)
Writes eight bytes containing the given value, into this buffer at the given index.
- virtual **ByteBuffer** & **putInt** (int value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)
Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.
- virtual **ByteBuffer** & **putInt** (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)
Writes four bytes containing the given value, into this buffer at the given index.
- virtual **ByteBuffer** & **putShort** (short value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)
Writes two bytes containing the given value, into this buffer at the current position, and then increments the position by eight.
- virtual **ByteBuffer** & **putShort** (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)
Writes two bytes containing the given value, into this buffer at the given index.
- virtual **ByteBuffer** * **slice** () const

Creates a new byte buffer whose content is a shared subsequence of this buffer's content.

Protected Member Functions

- virtual void **setReadOnly** (bool value)

*Sets this **ByteBuffer** (p. 806) as Read-Only.*

6.147.1 Detailed Description

This class defines six categories of operations upon byte buffers: 1. Absolute and relative get and put methods that read and write single bytes; 2. Relative bulk get methods that transfer contiguous sequences of bytes from this buffer into an array; 3. Relative bulk put methods that transfer contiguous sequences of bytes from a byte array or some other byte buffer into this buffer; 4. Absolute and relative get and put methods that read and write values of other primitive types, translating them to and from sequences of bytes in a particular byte order; 5. Methods for creating view buffers, which allow a byte buffer to be viewed as a buffer containing values of some other primitive type; and 6. Methods for compacting, duplicating, and slicing a byte buffer.

Byte buffers can be created either by allocation, which allocates space for the buffer's content, or by wrapping an existing byte array into a buffer.

Access to binary data:

This class defines methods for reading and writing values of all other primitive types, except boolean. Primitive values are translated to (or from) sequences of bytes according to the buffer's current byte order.

For access to heterogeneous binary data, that is, sequences of values of different types, this class defines a family of absolute and relative get and put methods for each type. For 32-bit floating-point values, for example, this class defines:

float **getFloat()** (p. 818) float getFloat(int index) void **putFloat(float f)** (p. 824) void putFloat(int index, float f)

Corresponding methods are defined for the types char, short, int, long, and double. The index parameters of the absolute get and put methods are in terms of bytes rather than of the type being read or written.

For access to homogeneous binary data, that is, sequences of values of the same type, this class defines methods that can create views of a given byte buffer. A view buffer is simply another buffer whose content is backed by the byte buffer. Changes to the byte buffer's content will be visible in the view buffer, and vice versa; the two buffers' position, limit, and mark values are independent. The asFloatBuffer method, for example, creates an instance of the FloatBuffer class that is backed by the byte buffer upon which the method is invoked. Corresponding view-creation methods are defined for the types char, short, int, long, and double.

View buffers have two important advantages over the families of type-specific get and put methods described above:

A view buffer is indexed not in terms of bytes but rather in terms of the type-specific size of its values;

A view buffer provides relative bulk get and put methods that can transfer contiguous sequences of values between a buffer and an array or some other buffer of the same type; and

6.147.2 Constructor & Destructor Documentation

6.147.2.1 `decaf::internal::nio::ByteBuffer::ByteBuffer (std::size_t capacity, bool readOnly = false)`

Creates a **ByteBuffer** (p. 806) object that has its backing array allocated internally and is then owned and deleted when this object is deleted.

The array is initially created with all elements initialized to zero.

Parameters

capacity - size of the array, this is the limit we read and write to.

readOnly - should this buffer be read-only, default as false

6.147.2.2 `decaf::internal::nio::ByteBuffer::ByteBuffer (unsigned char * array, std::size_t offset, std::size_t capacity, bool readOnly = false) throw (decaf::lang::exceptions::NullPointerException)`

Creates a **ByteBuffer** (p. 806) object that wraps the given array.

If the own flag is set then it will delete this array when this object is deleted.

Parameters

array - array to wrap

offset - the position that is this buffers start pos.

capacity - size of the array, this is the limit we read and write to.

readOnly - should this buffer be read-only, default as false

Exceptions

NullPointerException if buffer is NULL

6.147.2.3 `decaf::internal::nio::ByteBuffer::ByteBuffer (ByteArrayPerspective & array, std::size_t offset, std::size_t length, bool readOnly = false) throw (decaf::lang::exceptions::IndexOutOfBoundsException)`

Creates a byte buffer that wraps the passed **ByteArrayPerspective** (p. 843) and start at the given offset.

The capacity and limit of the new **ByteBuffer** (p. 806) will be that of the remaining capacity of the passed buffer.

Parameters

array - the **ByteArrayPerspective** (p. 843) to wrap

offset - the offset into array where the buffer starts

length - the length of the array we are wrapping or limit.

readOnly - is this a readOnly buffer.

Exceptions

IndexOutOfBoundsException if offset is greater than array capacity.

6.147.2.4 decaf::internal::nio::ByteBuffer::ByteBuffer (const ByteBuffer & *other*)

Create a **ByteBuffer** (p. 806) that mirrors this one, meaning it shares a reference to this buffers **ByteBufferPerspective** (p. 843) and when changes are made to that data it is reflected in both.

Parameters

other - the **ByteBuffer** (p. 806) this one is to mirror.

6.147.2.5 virtual decaf::internal::nio::ByteBuffer::~~ByteBuffer () [virtual]

6.147.3 Member Function Documentation

6.147.3.1 virtual unsigned char* decaf::internal::nio::ByteBuffer::array () throw (decaf::nio::ReadOnlyBufferException, decaf::lang::exceptions::UnsupportedOperationException) [virtual]

Returns the byte array that backs this buffer.

Modifications to this buffer's content will cause the returned array's content to be modified, and vice versa.

Invoke the `hasArray` method before invoking this method in order to ensure that this buffer has an accessible backing array.

Returns

The array that backs this buffer

Exceptions

ReadOnlyBufferException - If this buffer is backed by an array but is read-only

UnsupportedOperationException - If this buffer is not backed by an accessible array

Implements **decaf::nio::ByteBuffer** (p. 854).

6.147.3.2 virtual std::size_t decaf::internal::nio::ByteBuffer::arrayOffset () const throw (decaf::nio::ReadOnlyBufferException, lang::exceptions::UnsupportedOperationException) [virtual]

Returns the offset within this buffer's backing array of the first element of the buffer.

If this buffer is backed by an array then buffer position `p` corresponds to array index `p + arrayOffset()` (p. 812).

Invoke the `hasArray` method before invoking this method in order to ensure that this buffer has an accessible backing array.

Returns

The offset within this buffer's array of the first element of the buffer

Exceptions

ReadOnlyBufferException - If this buffer is backed by an array but is read-only

UnsupportedOperationException - If this buffer is not backed by an accessible array

Implements **decaf::nio::ByteBuffer** (p. 854).

6.147.3.3 `virtual decaf::nio::CharBuffer* decaf::internal::nio::ByteArrayBuffer::asCharBuffer ()`
`const [inline, virtual]`

Creates a view of this byte buffer as a char buffer.

The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

the new Char Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 855).

6.147.3.4 `virtual decaf::nio::DoubleBuffer* decaf::internal::nio::ByteArrayBuffer::asDoubleBuffer ()`
`const [inline, virtual]`

Creates a view of this byte buffer as a double buffer.

The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by eight, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

the new double Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 855).

6.147.3.5 `virtual decaf::nio::FloatBuffer* decaf::internal::nio::ByteArrayBuffer::asFloatBuffer ()`
`const [inline, virtual]`

Creates a view of this byte buffer as a float buffer.

The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by four, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

the new float Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 855).

6.147.3.6 `virtual decaf::nio::IntBuffer* decaf::internal::nio::ByteBuffer::asIntBuffer () const [inline, virtual]`

Creates a view of this byte buffer as a int buffer.

The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by four, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

the new int Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 856).

6.147.3.7 `virtual decaf::nio::LongBuffer* decaf::internal::nio::ByteBuffer::asLongBuffer () const [inline, virtual]`

Creates a view of this byte buffer as a long buffer.

The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by eight, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

the new long Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 856).

6.147.3.8 `virtual ByteBuffer* decaf::internal::nio::ByteBuffer::asReadOnlyBuffer () const [virtual]`

Creates a new, read-only byte buffer that shares this buffer's content.

The content of the new buffer will be that of this buffer. Changes to this buffer's content will be visible in the new buffer; the new buffer itself, however, will be read-only and will not allow the shared content to be modified. The two buffers' position, limit, and mark values will be independent.

If this buffer is itself read-only then this method behaves in exactly the same way as the duplicate method.

The new buffer's capacity, limit, position, and mark values will be identical to those of this buffer.

Returns

The new, read-only byte buffer which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 856).

6.147.3.9 **virtual decaf::nio::ShortBuffer* decaf::internal::nio::ByteBuffer::asShortBuffer ()**
const [inline, virtual]

Creates a view of this byte buffer as a short buffer.

The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by two, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

the new short Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 857).

6.147.3.10 **virtual ByteBuffer& decaf::internal::nio::ByteBuffer::compact () throw (decaf::nio::ReadOnlyBufferException) [virtual]**

Compacts this buffer.

The bytes between the buffer's current position and its limit, if any, are copied to the beginning of the buffer. That is, the byte at index `p = position()` (p. 746) is copied to index zero, the byte at index `p + 1` is copied to index one, and so forth until the byte at index `limit()` (p. 745) - 1 is copied to index `n = limit() (p. 745) - 1 - p`. The buffer's position is then set to `n+1` and its limit is set to its capacity. The mark, if defined, is discarded.

The buffer's position is set to the number of bytes copied, rather than to zero, so that an invocation of this method can be followed immediately by an invocation of another relative put method.

Returns

a reference to this **ByteBuffer** (p. 806)

Exceptions

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 857).

6.147.3.11 `virtual ByteBuffer* decaf::internal::nio::ByteBuffer::duplicate ()`
[virtual]

Creates a new byte buffer that shares this buffer's content.

The content of the new buffer will be that of this buffer. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's capacity, limit, position, and mark values will be identical to those of this buffer. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

a new Byte Buffer which the caller owns.

Implements **decaf::nio::ByteBuffer** (p. 858).

6.147.3.12 `virtual unsigned char decaf::internal::nio::ByteBuffer::get ()`
`const throw (decaf::nio::BufferUnderflowException)` [virtual]

Relative get method.

Reads the byte at this buffer's current position, and then increments the position.

Returns

The byte at the buffer's current position

Exceptions

BufferUnderflowException - If the buffer's current position is not smaller than its limit

Implements **decaf::nio::ByteBuffer** (p. 859).

6.147.3.13 `virtual unsigned char decaf::internal::nio::ByteBuffer::get`
`(std::size_t index) const throw (`
`lang::exceptions::IndexOutOfBoundsException)`
[virtual]

Absolute get method.

Reads the byte at the given index.

Parameters

index - the index in the Buffer where the byte is to be read

Returns

the byte that is located at the given index

Exceptions

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

Implements **decaf::nio::ByteBuffer** (p. 859).

6.147.3.14 `virtual char decaf::internal::nio::ByteBuffer::getChar () throw (decaf::nio::BufferUnderflowException) [inline, virtual]`

Reads the next byte at this buffer's current position, and then increments the position by one.

Returns

the next char in the buffer..

Exceptions

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 860).

6.147.3.15 `virtual char decaf::internal::nio::ByteBuffer::getChar (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [inline, virtual]`

Reads one byte at the given index and returns it.

Parameters

index - the index in the Buffer where the byte is to be read

Returns

the char at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

Implements **decaf::nio::ByteBuffer** (p. 860).

6.147.3.16 `virtual double decaf::internal::nio::ByteBuffer::getDouble () throw (decaf::nio::BufferUnderflowException) [virtual]`

Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.

Returns

the next double in the buffer..

Exceptions

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 861).

6.147.3.17 virtual double decaf::internal::nio::ByteBuffer::getDouble
(std::size_t *index*) const throw (
lang::exceptions::IndexOutOfBoundsException)
[virtual]

Reads eight bytes at the given index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the double at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 861).

6.147.3.18 virtual float decaf::internal::nio::ByteBuffer::getFloat () throw (
decaf::nio::BufferUnderflowException) [virtual]

Reads the next four bytes at this buffer's current position, and then increments the position by that amount.

Returns

the next float in the buffer..

Exceptions

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 861).

6.147.3.19 virtual float decaf::internal::nio::ByteBuffer::getFloat (std::size_t *index*) const throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]

Reads four bytes at the given index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the float at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 862).

6.147.3.20 `virtual int decaf::internal::nio::ByteArrayBuffer::getInt () throw (decaf::nio::BufferUnderflowException) [virtual]`

Reads the next four bytes at this buffer's current position, and then increments the position by that amount.

Returns

the next int in the buffer..

Exceptions

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 862).

6.147.3.21 `virtual int decaf::internal::nio::ByteArrayBuffer::getInt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads four bytes at the given index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the int at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 862).

6.147.3.22 `virtual long long decaf::internal::nio::ByteArrayBuffer::getLong () throw (decaf::nio::BufferUnderflowException) [virtual]`

Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.

Returns

the next long long in the buffer..

Exceptions

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 863).

6.147.3.23 `virtual long long decaf::internal::nio::ByteBuffer::getLong
 (std::size_t index) const throw (
 lang::exceptions::IndexOutOfBoundsException)
 [virtual]`

Reads eight bytes at the given index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the long long at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 863).

6.147.3.24 `virtual short decaf::internal::nio::ByteBuffer::getShort (std::size_t
 index) const throw (lang::exceptions::IndexOutOfBoundsException
) [virtual]`

Reads two bytes at the given index and returns it.

Parameters

index - the index in the Buffer where the bytes are to be read

Returns

the short at the given index in the buffer

Exceptions

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 864).

6.147.3.25 `virtual short decaf::internal::nio::ByteBuffer::getShort () throw
 (decaf::nio::BufferUnderflowException) [virtual]`

Reads the next two bytes at this buffer's current position, and then increments the position by that amount.

Returns

the next short in the buffer..

Exceptions

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 863).

6.147.3.26 `virtual bool decaf::internal::nio::ByteArrayBuffer::hasArray () const`
`[inline, virtual]`

Tells whether or not this buffer is backed by an accessible byte array.

If this method returns true then the array and arrayOffset methods may safely be invoked. Sub-classes should override this method if they do not have a backing array as this class always returns true.

Returns

true if, and only if, this buffer is backed by an array and is not read-only

Implements `decaf::nio::ByteBuffer` (p. 864).

6.147.3.27 `virtual bool decaf::internal::nio::ByteArrayBuffer::isReadOnly ()`
`const [inline, virtual]`

Tells whether or not this buffer is read-only.

Returns

true if, and only if, this buffer is read-only

Implements `decaf::nio::ByteBuffer` (p. 864).

6.147.3.28 `virtual ByteArrayBuffer& decaf::internal::nio::ByteArrayBuffer::put (`
`unsigned char value) throw (decaf::nio::BufferOverflowException,`
`decaf::nio::ReadOnlyBufferException) [virtual]`

Writes the given byte into this buffer at the current position, and then increments the position.

Parameters

value - the byte value to be written

Returns

a reference to this buffer

Exceptions

BufferOverflowException - If this buffer's current position is not smaller than its limit

ReadOnlyBufferException - If this buffer is read-only

Implements `decaf::nio::ByteBuffer` (p. 865).

6.147.3.29 `virtual ByteArrayBuffer& decaf::internal::nio::ByteArrayBuffer::put`
`(std::size_t index, unsigned char value) throw`
`(lang::exceptions::IndexOutOfBoundsException,`
`decaf::nio::ReadOnlyBufferException) [virtual]`

Writes the given byte into this buffer at the given index.

Parameters

index - position in the Buffer to write the data
value - the byte to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 865).

6.147.3.30 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putChar (std::size_t index, char value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]`

Writes one byte containing the given value, into this buffer at the given index.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 868).

6.147.3.31 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putChar (char value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]`

Writes one byte containing the given value, into this buffer at the current position, and then increments the position by one.

Parameters

value - The value to be written

Returns

a reference to this buffer

Exceptions

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 867).

6.147.3.32 **virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putDouble (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]**

Writes eight bytes containing the given value, into this buffer at the given index.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 869).

6.147.3.33 **virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putDouble (double value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]**

Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters

value - The value to be written

Returns

a reference to this buffer

Exceptions

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 868).

6.147.3.34 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putFloat (std::size_t *index*, float *value*) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes four bytes containing the given value, into this buffer at the given index.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 869).

6.147.3.35 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putFloat (float *value*) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters

value - The value to be written

Returns

a reference to this buffer

Exceptions

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 869).

6.147.3.36 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putInt (std::size_t *index*, int *value*) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes four bytes containing the given value, into this buffer at the given index.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 870).

6.147.3.37 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putInt (int value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]`

Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters

value - The value to be written

Returns

a reference to this buffer

Exceptions

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 870).

6.147.3.38 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putLong (long long value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]`

Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters

value - The value to be written

Returns

a reference to this buffer

Exceptions

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 871).

6.147.3.39 **virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putLong (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]**

Writes eight bytes containing the given value, into this buffer at the given index.

Parameters

index - position in the Buffer to write the data

value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 871).

6.147.3.40 **virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putShort (short value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]**

Writes two bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters

value - The value to be written

Returns

a reference to this buffer

Exceptions

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 872).

6.147.3.41 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putShort (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]`

Writes two bytes containing the given value, into this buffer at the given index.

Parameters

index - position in the Buffer to write the data
value - the value to write.

Returns

a reference to this buffer

Exceptions

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 872).

6.147.3.42 `virtual void decaf::internal::nio::ByteBuffer::setReadOnly (bool value) [inline, protected, virtual]`

Sets this **ByteBuffer** (p. 806) as Read-Only.

Parameters

value - true if this buffer is to be read-only.

6.147.3.43 `virtual ByteBuffer* decaf::internal::nio::ByteBuffer::slice () const [virtual]`

Creates a new byte buffer whose content is a shared subsequence of this buffer's content.

The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns

the newly create **ByteBuffer** (p. 806) which the caller owns.

Implements **decaf::nio::ByteBuffer** (p. 872).

The documentation for this class was generated from the following file:

- `src/main/decaf/internal/nio/ByteBuffer.h`

6.148 decaf::io::ByteArrayInputStream Class Reference

Simple implementation of **InputStream** (p.1630) that wraps around an STL Vector `std::vector<unsigned char>`.

```
#include <src/main/decaf/io/ByteArrayInputStream.h>
```

Inheritance diagram for `decaf::io::ByteArrayInputStream`:

Public Member Functions

- **ByteArrayInputStream** ()
Default Constructor.
- **ByteArrayInputStream** (const std::vector< unsigned char > &buffer)
Creates the input stream and calls setBuffer with the specified buffer object.
- **ByteArrayInputStream** (const unsigned char *buffer, std::size_t bufferSize)
Constructor.
- virtual ~**ByteArrayInputStream** ()
- virtual void **setBuffer** (const std::vector< unsigned char > &buffer)
Sets the internal buffer.
- virtual void **setByteArray** (const unsigned char *buffer, std::size_t bufferSize)
Sets the data that this reader uses, replaces any existing data and resets to beginning of the buffer.
- virtual std::size_t **available** () const throw (IOException)
Indicates the number of bytes available.
- virtual int **read** () throw (IOException)
Reads a single byte from the buffer.
- virtual int **read** (unsigned char *buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException)
Reads an array of bytes from the buffer.
- virtual void **close** () throw (io::IOException)
Closes the target input stream.
- virtual std::size_t **skip** (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException)
Skips over and discards n bytes of data from this input stream.
- virtual void **mark** (int readLimit DECAF_UNUSED)
Marks the current position in the stream A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
- virtual void **reset** () throw (IOException)

Resets the read index to the beginning of the byte array, unless mark has been called and the markLimit has not been exceeded, in which case the stream is reset to the marked position.

- virtual bool **markSupported** () const

Determines if this input stream supports the mark and reset methods.

Protected Member Functions

- virtual void **lock** () throw (decaf::lang::exceptions::RuntimeException)

Locks the object.

- virtual bool **tryLock** () throw (decaf::lang::exceptions::RuntimeException)

Attempts to Lock the object, if the lock is already held by another thread than this method returns false.

- virtual void **unlock** () throw (decaf::lang::exceptions::RuntimeException)

Unlocks the object.

- virtual void **wait** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **wait** (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **wait** (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **notify** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals a waiter on this object that it can now wake up and continue.

- virtual void **notifyAll** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals the waiters on this object that it can now wake up and continue.

6.148.1 Detailed Description

Simple implementation of **InputStream** (p.1630) that wraps around an STL Vector `std::vector<unsigned char>`. Closing a **ByteArrayInputStream** (p.828) has no effect. The methods in this class can be called after the stream has been closed without generating an **IOException** (p.1707).

6.148.2 Constructor & Destructor Documentation

6.148.2.1 decaf::io::ByteArrayInputStream::ByteArrayInputStream ()

Default Constructor.

6.148.2.2 decaf::io::ByteArrayInputStream::ByteArrayInputStream (const std::vector< unsigned char > & *buffer*)

Creates the input stream and calls setBuffer with the specified buffer object.

Parameters

buffer The buffer to be used.

6.148.2.3 decaf::io::ByteArrayInputStream::ByteArrayInputStream (const unsigned char * *buffer*, std::size_t *bufferSize*)

Constructor.

Parameters

buffer initial byte array to use to read from

bufferSize the size of the buffer

6.148.2.4 virtual decaf::io::ByteArrayInputStream::~~ByteArrayInputStream () [virtual]

6.148.3 Member Function Documentation

6.148.3.1 virtual std::size_t decaf::io::ByteArrayInputStream::available () const throw (IOException) [inline, virtual]

Indicates the number of bytes available.

Returns

The number of bytes until the end of the internal buffer.

Implements **decaf::io::InputStream** (p. 1631).

6.148.3.2 virtual void decaf::io::ByteArrayInputStream::close () throw (io::IOException) [inline, virtual]

Closes the target input stream.

Exceptions

IOException (p. 1707) thrown if an error occurs.

6.148.3.3 `virtual void decaf::io::ByteArrayInputStream::lock () throw (decaf::lang::exceptions::RuntimeException) [inline, protected, virtual]`

Locks the object.

Exceptions

RuntimeException if an error occurs while locking the object.

Implements `decaf::util::concurrent::Synchronizable` (p. 2932).

6.148.3.4 `virtual void decaf::io::ByteArrayInputStream::mark (int readLimit DECAF_UNUSED) [inline, virtual]`

Marks the current position in the stream. A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.

If a stream instance reports that marks are supported then the stream will ensure that the same bytes can be read again after the reset method is called so long the readLimit is not reached.

Parameters

readLimit - max bytes read before marked position is invalid.

Implements `decaf::io::InputStream` (p. 1631).

6.148.3.5 `virtual bool decaf::io::ByteArrayInputStream::markSupported () const [inline, virtual]`

Determines if this input stream supports the mark and reset methods.

Whether or not mark and reset are supported is an invariant property of a particular input stream instance.

Returns

true if this stream instance supports marks

Implements `decaf::io::InputStream` (p. 1631).

6.148.3.6 `virtual void decaf::io::ByteArrayInputStream::notify () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, protected, virtual]`

Signals a waiter on this object that it can now wake up and continue.

Must have this object locked before calling.

Exceptions

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying one of the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 2933).

6.148.3.7 `virtual void decaf::io::ByteArrayInputStream::notifyAll () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, protected, virtual]`

Signals the waiters on this object that it can now wake up and continue.

Must have this object locked before calling.

Exceptions

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 2934).

6.148.3.8 `virtual int decaf::io::ByteArrayInputStream::read () throw (IOException) [virtual]`

Reads a single byte from the buffer.

Returns

The next byte.

Exceptions

IOException (p. 1707) thrown if an error occurs.

Implements `decaf::io::InputStream` (p. 1632).

6.148.3.9 `virtual int decaf::io::ByteArrayInputStream::read (unsigned char * buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException) [virtual]`

Reads an array of bytes from the buffer.

Parameters

buffer (out) the target buffer.

offset the position in the buffer to start reading from.

bufferSize the size of the output buffer.

Returns

The number of bytes read.

Exceptions

IOException (p. 1707) thrown if an error occurs.

Implements `decaf::io::InputStream` (p. 1632).

6.148.3.10 `virtual void decaf::io::ByteArrayInputStream::reset () throw (IOException) [virtual]`

Resets the read index to the beginning of the byte array, unless mark has been called and the markLimit has not been exceeded, in which case the stream is reset to the marked position.

Implements **decaf::io::InputStream** (p. 1633).

6.148.3.11 `virtual void decaf::io::ByteArrayInputStream::setBuffer (const std::vector< unsigned char > & buffer) [virtual]`

Sets the internal buffer.

The input stream will wrap around this buffer and will perform all read operations on it. The position will be reinitialized to the beginning of the specified buffer. This class will not own the given buffer - it is the caller's responsibility to free the memory of the given buffer as appropriate.

Parameters

buffer The buffer to be used.

6.148.3.12 `virtual void decaf::io::ByteArrayInputStream::setByteArray (const unsigned char * buffer, std::size_t bufferSize) [virtual]`

Sets the data that this reader uses, replaces any existing data and resets to beginning of the buffer.

Parameters

buffer initial byte array to use to read from

bufferSize the size of the buffer

6.148.3.13 `virtual std::size_t decaf::io::ByteArrayInputStream::skip (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException) [virtual]`

Skips over and discards n bytes of data from this input stream.

The skip method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before n bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If n is negative, no bytes are skipped.

The skip method of **InputStream** (p. 1630) creates a byte array and then repeatedly reads into it until n bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters

num - the number of bytes to skip

Returns

total bytes skipped

Exceptions

IOException (p. 1707) if an error occurs

Implements **decaf::io::InputStream** (p. 1633).

6.148.3.14 `virtual bool decaf::io::ByteArrayInputStream::tryLock () throw (decaf::lang::exceptions::RuntimeException) [inline, protected, virtual]`

Attempts to Lock the object, if the lock is already held by another thread than this method returns false.

Returns

true if the lock was acquired, false if it is already held by another thread.

Exceptions

RuntimeException if an error occurs while locking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2935).

6.148.3.15 `virtual void decaf::io::ByteArrayInputStream::unlock () throw (decaf::lang::exceptions::RuntimeException) [inline, protected, virtual]`

Unlocks the object.

Exceptions

RuntimeException if an error occurs while unlocking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2936).

6.148.3.16 `virtual void decaf::io::ByteArrayInputStream::wait (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, protected, virtual]`

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling. This wait will timeout after the specified time interval. This method is similar to the one argument wait function except that it add a finer grained control over the amount of time that it waits by adding in the additional nanosecond argument.

NOTE: The ability to wait accurately at a nanosecond scale depends on the platform and OS that the Decaf API is running on, some systems do not provide an accurate enough clock to provide this level of granularity.

Parameters

millisecs the time in milliseconds to wait, or WAIT_INFINITE

nanos additional time in nanoseconds with a range of 0-999999

Exceptions

IllegalArgumentException if an error occurs or the *nanos* argument is not in the range of [0-999999]

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements `decaf::util::concurrent::Synchronizable` (p. 2940).

```
6.148.3.17  virtual void decaf::io::ByteArrayInputStream::wait ( long long
               millisecs ) throw ( decaf::lang::exceptions::RuntimeException,
               decaf::lang::exceptions::IllegalMonitorStateException,
               decaf::lang::exceptions::InterruptedException ) [inline, protected,
               virtual]
```

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling. This wait will timeout after the specified time interval.

Parameters

millisecs the time in milliseconds to wait, or WAIT_INFINITE

Exceptions

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements `decaf::util::concurrent::Synchronizable` (p. 2938).

```
6.148.3.18  virtual void decaf::io::ByteArrayInputStream::wait (      )
               throw ( decaf::lang::exceptions::RuntimeException,
               decaf::lang::exceptions::IllegalMonitorStateException,
               decaf::lang::exceptions::InterruptedException ) [inline, protected,
               virtual]
```

Waits on a signal from this object, which is generated by a call to Notify.

Must have this object locked before calling.

Exceptions

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2937).

The documentation for this class was generated from the following file:

- `src/main/decaf/io/ByteArrayInputStream.h`

6.149 decaf::io::ByteArrayOutputStream Class Reference

```
#include <src/main/decaf/io/ByteArrayOutputStream.h>
```

Inheritance diagram for decaf::io::ByteArrayOutputStream:

Public Member Functions

- **ByteArrayOutputStream** ()
Default Constructor - uses a default internal buffer.
- **ByteArrayOutputStream** (std::vector< unsigned char > &buffer)
Uses the given buffer as the target.
- virtual ~**ByteArrayOutputStream** ()
- virtual void **setBuffer** (std::vector< unsigned char > &buffer)
Sets the internal buffer.
- virtual const unsigned char * **toByteArray** () const
Get a snapshot of the data.
- virtual const std::vector< unsigned char > **toByteArrayRef** () const
Get a snapshot of the data.
- virtual std::size_t **size** () const
Get the Size of the Internal Buffer.
- virtual void **write** (unsigned char c) throw (IOException)
Writes a single byte to the output stream.
- virtual void **write** (const std::vector< unsigned char > &buffer) throw (IOException)
Writes an array of bytes to the output stream.
- virtual void **write** (const unsigned char *buffer, std::size_t offset, std::size_t len) throw (IOException, lang::exceptions::NullPointerException)
Writes an array of bytes to the output stream.
- virtual void **flush** () throw (IOException)
Invokes flush on the target output stream, has no affect.
- virtual void **reset** () throw (IOException)
Clear current Stream contents.

- `void close () throw (io::IOException)`
Invokes close on the target output stream.
- `std::string toString () const`
Converts the bytes in the buffer into a standard C++ string.
- `void writeTo (OutputStream *out) const throw (IOException, lang::exceptions::NullPointerException)`
Writes the complete contents of this byte array output stream to the specified output stream argument, as if by calling the output stream's write method using out.write(buf, 0, count).
- `virtual void lock () throw (decaf::lang::exceptions::RuntimeException)`
Locks the object.
- `virtual bool tryLock () throw (decaf::lang::exceptions::RuntimeException)`
Attempts to Lock the object, if the lock is already held by another thread than this method returns false.
- `virtual void unlock () throw (decaf::lang::exceptions::RuntimeException)`
Unlocks the object.
- `virtual void wait () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)`
Waits on a signal from this object, which is generated by a call to Notify.
- `virtual void wait (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)`
Waits on a signal from this object, which is generated by a call to Notify.
- `virtual void wait (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)`
Waits on a signal from this object, which is generated by a call to Notify.
- `virtual void notify () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)`
Signals a waiter on this object that it can now wake up and continue.
- `virtual void notifyAll () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)`
Signals the waiters on this object that it can now wake up and continue.

6.149.1 Constructor & Destructor Documentation

6.149.1.1 decaf::io::ByteArrayOutputStream::ByteArrayOutputStream ()

Default Constructor - uses a default internal buffer.

6.149.1.2 decaf::io::ByteArrayOutputStream::ByteArrayOutputStream (std::vector< unsigned char > & *buffer*)

Uses the given buffer as the target.

Calls setBuffer.

Parameters

buffer the target buffer.

6.149.1.3 virtual decaf::io::ByteArrayOutputStream::~~ByteArrayOutputStream () [inline, virtual]

6.149.2 Member Function Documentation

6.149.2.1 void decaf::io::ByteArrayOutputStream::close () throw (io::IOException) [inline]

Invokes close on the target output stream.

Exceptions

IOException (p. 1707)

6.149.2.2 virtual void decaf::io::ByteArrayOutputStream::flush () throw (IOException) [inline, virtual]

Invokes flush on the target output stream, has no affect.

Exceptions

IOException (p. 1707)

Implements **decaf::io::OutputStream** (p. 2317).

6.149.2.3 virtual void decaf::io::ByteArrayOutputStream::lock () throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]

Locks the object.

Exceptions

RuntimeException if an error occurs while locking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 2932).

6.149.2.4 virtual void decaf::io::ByteArrayOutputStream::notify () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]

Signals a waiter on this object that it can now wake up and continue.

Must have this object locked before calling.

Exceptions

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying one of the waiting threads.

Implements **decaf::util::concurrent::Synchronizable** (p. 2933).

6.149.2.5 `virtual void decaf::io::ByteArrayOutputStream::notifyAll () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]`

Signals the waiters on this object that it can now wake up and continue.
